```
Pg No 1 – 15:
Q1)
Which two can be considered good practices for serializing Java objects?
A)Implement serialization for long-term data storage.
B)Always override the readObject/writeObject methods from the java.io.Serializable
interface.
C)Assign null value by default while serializing and deserializing a transient variable.
D)Ensure that the class definition used is the same as the class definition used by Java
runtime at the time when the object was serialized.
E)Implement secure serialization by generating secure object hash or using
encryption.
Q2)
Given TripleThis.java:
6.import java.util.function.*;
7.public class TripleThis {
       public static void main(String[] args) {
8.
9.
         Function tripler = x -> { return (Integer) x 3; };
10.
              TripleThis.printValue (tripler, 4);
11.
      }
12.
       public static void printValue (Function f, T num) {
13.
              System.out.println(f.apply (num));
14.
      }
15. }
```

```
Compiling TripleThis.java gives this compiler warning:
Note: TripleThis.java uses unchecked or unsafe operations.
Which two replacements remove this compiler warning and prints 12?
A)Replace line 12 with public static void printValue (Function f, T num) {
B)Replace line 9 with Function tripler = x \rightarrow \{ return x + 3; \}
C)Replace line 9 with Function tripler = x \rightarrow \{ return x * 3; \}
D)Replace line 12 with public static void printValue (Function f, Integer num) {
E)Replace line 12 with public static void printValue (Function f, int num) {
F)Replace line 9 with Function tripler = x -> { return (Integer) x 3; }
Q3)
Which two are valid statements?
A)BiPredicate test = (final var x, y) -> (x.equals(y));
B)BiPredicate test = (final Integer x, var y) -> (x.equals(y));
C)BiPredicate test = (Integer x, final Integer y) -> (x.equals(y));
D)BiPredicate test = (var x, final var y) -> (x.equals(y));
E)BiPredicate test = (Integer x, final var y) -> (x.equals(y));
Q4)
public class Resource {
       public Worker owner;
```

```
}
public class Worker {
       private boolean ready = true;
       public synchronized boolean isReady () {
       return ready;
}
public synchronized void work (Worker other, Resource resource) {
       while (ready) {
              while (resource.owner != this) {
               try{
                 wait(10);
         }
      catch (InterruptedException e) {}
}
if (other.isReady()) {
       resource.owner = other;
}
else {
       // do work with resource
       ready false;
       resource.owner = other;
       }
   }
}
```

```
And given this fragment:
Worker wl = new Worker();
Worker w2 = new Worker();
Resource r = new Resource();
resource.owner = w1;
new Thread(() -> {
  wl.work(w2, r);
}).start();
new Thread(() -> {
  w2.work(wl, r);
} ).start();
Which describes the fragment?
A)It is subject to livelock.
B)It is subject to deadlock.
C)The code does not compile.
D)It throws an IllegalMonitorstateException.
Q5)
Automobile.java
public abstract class Automobile { //line 1
      abstract void wheels();
```

```
}
Car.java
public class Car extends Automobile {
  void wheels(int i) {
                          // line 2
                            // line 3
   System.out.print(4);
 }
 public static void main(String[] args) {
      Automobile ob new Car(); // line 4
    ob.wheels();
 }
}
What must you do so that the code prints 4?
A)Replace the code in line 2 with Car ob = new Car();
B)Remove abstract keyword in line 1.
C)Add @Override annotation at line 2.
D)Remove the parameter from wheels method in line 3.
Q6)
public class Person {
 private String name;
 public Person(String name) {
  this.name = name;
 }
```

```
public String toString() {
  return name;
}
}
and
public class Tester {
 static Person p = null;
 public static void main(String[] args) {
  p = checkPerson(p);
  System.out.println(p);
  Person pl = new Person("Joe");
  p1 = checkPerson(p);
  System.out.println(pl);
}
public static Person checkPerson (Person p) {
 if (p == null) {
 p = new Person("Mary");
 return p;
}
}
What is the result?
```

A)Mary

```
Mary
B)Joe
  Joe
C)Marry
 Joe
D)null
 null
Q7)
public class ExSuper extends Exception {
 private final int eCode;
 public ExSuper (int eCode, Throwable cause) {
  super (cause);
  this.eCode = eCode;
  }
  public ExSuper (int eCode, String msg, Throwable cause) {
    super (msg, cause);
    this.eCode = eCode;
  }
  public String getMessage() {
   return this.eCode+": "+super.getMessage()+"-"+this.getCause().getMessage();
  }
}
public class ExSub extends ExSuper {
```

```
public ExSub (int eCode, String msg, Throwable cause)
    { super(eCode, msg, cause); }
}
and the code fragment:
try {
  String paraml = "Oracle";
  if (paraml.equalsIgnoreCase("oracle")) {
     throw new ExSub (9001, "APPLICATION ERROR-9001", new
FileNotFoundException ("MyFile.txt"));
 }
  throw new ExSuper (9001, new FileNotFoundException("MyFile.txt"));
} catch (ExSuper ex) {
 System.out.println(ex.getMessage());
}
What is the result?
A)9001: APPLICATION ERROR-9001-MyFile.txt
B)Compilations fails at Line 1.
C)9001: java.io.FileNotFoundException: MyFile.txt-MyFile.txt
D)9001: APPLICATION ERROR-9001-MyFile.txt
E)9001; java.io.FileNotFoundException: MyFile.txt-MyFile.txt
Q8)
public class Person {
 private String name;
 private Person child;
```

```
public Person (String name, Person child) {
   this (name);
   this.child = child;
}
public Person(String name) {
   this.name = name;
}
public String toString() {
  return name+" "+child;
}
}
and
public class Tester {
public static Person createPeople() {
  Person jane new Person("Jane");
  Person john = new Person("John", jane);
  return jane;
}
public static Person createPerson (Person person) {
  person = new Person("Jack", person);
  return person;
}
public static void main(String[] args) {
  Person person = createPeople();
```

```
/* line 1 */
  person = createPerson (person);
  /* line 2*/
  String name = person.toString();
  System.out.println(name);
 }
}
Which statement is true?
A)The memory allocated for Jane object can be reused in line 2.
B)The memory allocated for Jack object can be reused in line 2.
C)The memory allocated for John object can be reused in line 1.
D)The memory allocated for Jane object can be reused in line
Q9)
public class Employee {
      private String name;
       private String neighborhood;
      private int salary;
      // Constructors and setter and getter methods go here
}
and the code fragment:
```

```
List roster new ArrayList<>();
Predicate p e-> e.getSalary() > 30;
Function> f = e-> Optional.of Nullable(e.getNeighborhood());
Which two Map objects group all employees with a salary greater than 30 by
neighborhood?
A)Map<Optional<String>, List<Employee>> r5 = roster.stream()
.collect (Collectors.groupingBy (Employee::getNeighborhood, Collectors.filtering (p,
Collectors.toList()));));
B)Map<String, List<Employee>> r2 = roster.stream().filter(p) .collect
(Collectors.groupingBy(f, Employee::getNeighborhood));
C)Map<String, List<Employee>> r1 = roster.stream().collect (Collectors.groupingBy
(Employee::getNeighborhood, Collectors.filtering(p, Collectors.toList()));
D)Map<Optional<String>, List<Employee>> r4 = roster stream().collect
(Collectors.groupingByIf, Collectors filteringip. Collectors.toList())));
E)Map<Optional<String>, List<Employee>> r3 = roster.stream().filter(p).collect
(Collectors.groupingBy(p));
Q10)
int i=3;
int j = 25;
System.out.println(i > 2?i > 10?i(j+10):1*j+5:1);
```

```
What is the result?
A)80
B)The compilation fails.
C)3
D)385
E)2
Page 16-31
1) Which three initialization is correct
a) short sh = (short)'A';
b)float x = 1f;
c) int x = 12_34;
d)byte b = 10;
char c = b;
e) boolean false = (4 != 4);
f)int[] [][] e = ((1,1,1), (2,2,2));
g)String contact# = "(+2) (999) (232)";//a,b,c
```

```
2) Given:
public class Tester {
       public static void main(String[] args){
              float x = 2, y = 4, z = 4;
              float a = y / x, b = y/z;
               if(a > b) {
               System.out.println(a + b);
              }
              }
```

What is the result?

}

```
a)2.0
```

b)An exception is thrown at runtime.

```
c)1.0
```

d)The program prints nothing.

<mark>e)3.0</mark>

```
a)
public class DNASynth {
  int aCount;
  int tCount;
  int gCount;
  int gCount;

void setACount (int cCount) {
    cCount cCount;
}

void setTCount() {
    this.tCount = tCount;
}

int setCCount() {
    return cCount;
}
```

```
}
int setGCount (int g) {
gCount = g;
return gCount;
}
void setAllCounts (int x) {
aCount = tCount = this.cCount = setGCount(x);
}
}
Which two methods modify field values
a)setAcount
b)setTCount
c)setGCount
d)setCCount
e)setGCount
4)
Given the code fragment:
public class FileHandler{
public static void main(String[] args) {
try (FileInputStream in = new FileInputStream("foo.txt")) {}
catch (FileNotFoundException e) {}
}
```

```
}
(FileInputStream will throw
filenotFound Exception but
AutoClosable will throw IOException)
Which two actions, independently, enable the code to compile?"
a) Replacing the catch block with:
catch (FileNotFoundException | Exception e) {}
finally {in.close(); }
b)Replacing the catch block with:
catch (Exception | IOException e) {}
c)Replacing the catch block with:
catch (Exception e) {}
d)Adding throws FileNotFoundException declaration at the main () method
e)Adding throws IOException declaration at the main () method
f)Inserting:
finally { in.close(); }
```

```
class MyType<T> {
private T value;
public T getValue() {
return value;
}
public void setValue(T value) {
this.value = value;
}
}
and
public class Test {
public static void main(String... args) {
MyType<String> strType = new MyType<>();
MyType<? extends Number> type = new MyType<>();
strType.setValue("test");
type.setValue(null);
System.out.println(strType.getValue() + ":" + type.getValue());
}
}
What is the result?
a)The compilation fails.
b)An Exception is thrown at runtime.
```

```
c)test:0
d)test:null
e)null:null
6)
public interface ExampleInterface {
static String origin "Interface";
void exampleMethod (String first);
}
public abstract class ExampleAbstractClass{
static String origin "Abstract Class";
abstract void exampleMethod(String first, String second);
}
public class ExampleClass extends ExampleAbstractClass implements
ExampleInterface
public void exampleMethod (String first) {}
public void exampleMethod (String first, String second){}
public static void main(String[] args) {
ExampleInterface theInstance new ExampleClass();
//line n1
}
Which two, when inserted at line n1 independently, will cause a compilation error?
a)theInstance.exampleMtethod(origin).
b)theInstance. exampletMethod(ExampleAbstractClass.origin);
```

```
c)((ExampleClass) theInstance).exampleMethod("Japan", "Mexico");
```

```
d)the
instance.exampleMethod(ExampleAbstractclass.origin,ExampleInterface.origin);
e)theInstance.exampleMethod("France");
7)Given:
public enum Status {
BRONZE (5), SILVER(10), GOLD(15);
private int rate;
private Status (int rate) {
this.rate = rate;
}
public int getRate() { return rate; }
public Status addStatus (int rate) {
return new Status (20);
}
}
and
public class Test {
public static void main(String[] args) {
Status silver = Status.SILVER;
System.out.println(silver+silver.getRate());
Status platinum = Status.addStatus (20);
System.out.println(platinum+platinum.getRate());
```

```
}
What is the result?
a)SILVER10
platinum20
b) An exception is thrown at runtime.
c) The compilation fails.
d)SILVER10
PLATINUM20
e)SILVER10
 20
8)
public interface A {
public Iterable a();
public interface B extends A {
public Collection a();
public interface C extends A {
public Path a();
}
public interface D extends B, C {
}
Why does D cause a compilation error?
```

a)D does not define any method.

b)D extends more than one interface.

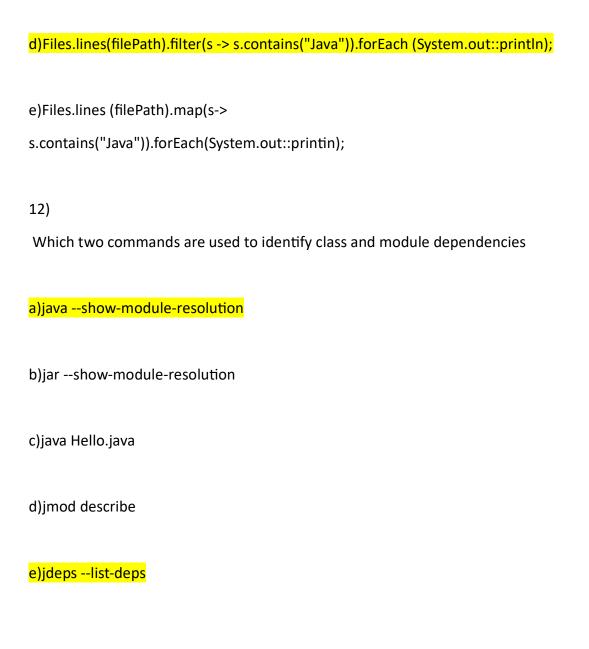

c)D inherits a () from B and c but the return types are incompatible.

```
d)D inherits a () only from c.
9)
public interface A {
abstract void x();
public default void y() { }
}
and
public abstract class B {
public abstract void z();
}
and
public class C extends B implements A (
/* insert code here */
}
What code inserted into class C would allow it to compile?
a) void x() {}
```

```
public void y() { }
public void z() { }
b) void x() {}
 public void z() { }
c)void x() { super.y(); }
 public void z() { }
d)public void x() { }
 protected void y() { super.y(); }
 public void z() {}
e)public void x() ()
 public void z() { }
10)
Given the data of the EMP table:
 ID NAME DEPT
 101SMITH HR
 102JONES KNG
 103WEAVERAR
Assuming that jdbcURL, username, and password are declared and initialised.
try (Connection conn = DriverManager.getConnection (jdbcURL, username,
password);
  PreparedStatement query = conn.prepareStatement ("SELECT ID, NAME FROM
EMP where
```

```
?");
PreparedStatement update = conn.prepareStatement ("INSERT INTO RECRUITING(
VALUES (?, ?)")) (
 query.setString(1, "HR");
 ResultSet rs = query.executeQuery()
 while (rs.next()) {
  update.setObject (1, rs.getObject (1, Integer.class), JDBCType.INTEGER),
  update.setObject (2, rs.getObject (2, String.class), JDBCType. VARCHAR)
  update.execute();
}
Which two happen upon execution?
a) Memory leaks because Connection, Prepared Statements, and Resultset are not
closed.
b)Three SQL statements are executed.
c) A SQLException is thrown because the Resultset is not closed.
d)Three PreparedStatement objects are created.
e)Two SQL statements are executed.
f)Two PreparedStatement objects are created.
11)
Given the content from the courses.txt file:
```

```
123: Java:1
 124:MySQL:2
 125: Java Server Pages: 3
Given the code fragment:
Path filePath = Paths.get("course.txt");
try {
/* line 1*/
} catch (IOException ex) {
System.out.format("File 10 Exception is thrown.", ex);
}
Which code fragment at line 1 prints the lines that contain Java from the course.
a)List<String> lines2 = Files.readAllLines(filePath).filter(s->
s.contains("Java"));
for (String line: lines2) {
System.out.println(line);
}
b)List<String> lines1 =
Files.readAllLines(filePath).contains("Java");
for (String line : lines2) {
System.out.println(line); }
c)System.out.println(Files.readString(filePath).contains ("Java"});
```

### Page 32-47

### **QUES 12.**

Which code fragment does a service use to load the service provider with a Print Interface?

- private java.util.ServiceLoader
   loader = ServiceLoader.load(Print.class);
- private Print print = com.service.Provider.getInstance();
- private Print print = new com.service.Provider.PrintImpl();
- 4. private java.util.ServiceLoader<Print> loader = new java.util.ServiceLoader();

```
QUES 5:
123:Java:1
124:MySQL:2
125:Java Server Pages:3
Given the code fragment:
Path filePath = Paths.get("course.txt");
try {
     /* line 1 */
} catch (IOException ex) {
  System.out.format("File IOException is thrown.", ex);
}
Which code fragment at line 1 prints the lines that contain "Java" from the course?
   A. List<String> lines2 = Files.readAllLines(filePath).filter(s ->
       s.contains("Java"));
         for (String line : lines2) {
              System.out.println(line);
          }
   B. List<String> lines1 = Files.readAllLines(filePath).contains("Java");
       for (String line : lines2) {
              System.out.println(line);
          }
   C. System.out.println(Files.readString(filePath).contains("Java"));
```

D. Files.lines(filePath).filter(s -> s.contains("Java")).forEach(System.out::println);

E. Files.lines(filePath).map(s -> s.contains("Java")).forEach(System.out::print);

Ans -: D - Correct, this reads the file line by line as a stream, filters lines containing "Java", and prints each matching line.

A - Incorrect, the Files.readAllLines() method returns a List<String>, and filter() is not a method of the List interface, so this code won't compile.

B - Incorrect, the contains() method checks if "Java" exists in the entire list, not within each line. This isn't applicable to the whole file read as a list. Also, lines2 is not declared.

C – Incorrect, this checks if "Java" is anywhere in the entire file and prints true or false, not the lines themselves.

### Ques-14

```
class Separators {
  public static String separator = "/";
  public static String pathSeparator = ":"; }
```

To secure this code, you want to make sure that the client code cannot modify the values. Which code will accomplish this?

```
A. abstract class Separators {
    public static String separator = "/";
    public static String pathSeparator = ":";
}
B. class Separators {
    private static String separator = "/";
    private static String pathSeparator = ":";
}
```

```
C. interface Separators {
  String separator = "/";
 String pathSeparator = ":";
D. enum Separators {
  separator,
  pathSeparator; }
Ques – 13
Which two expressions create a valid Java Path instance?
A. Paths.get(URI.create("file:///domains/oracle/test.txt")
B. Paths.get("foo")
C. new Path("foo")
D. Path.get(new URI ("file:///domains/oracle/test.txt"))
E. Paths.getPath("too")
Ans-: A & B (Correct)
C (Incorrect), Path is an interface, and you cannot instantiate an interface directly
using new.
D (Incorrect), The correct method to create a Path from a URI is Paths.get(URI uri),
not Path.get.
```

E (Incorrect), There is no method getPath in the Paths class. The correct method is

# Ques- 15

Paths.get.

Given the code fragment from Box.java:

```
Public class Box implements Serializable {
       private int boxId;
       private String size;
       private List items;
}
Given the code fragment from Item.java:
Public class Item {
       private int id;
       private String name;
}
The classes Box and Item are encapsulated with getter and setter methods.
The classes Box and Item contain required constructors source code.
And the code fragment:
public static void main(String[] args) throws IOException {
  List items1 = new ArrayList<>();
  items1.add(new Item(1, "Pen"));
  items1.add(new Item(2, "Ruler"));
  Box b1 = new Box(123, "s", items1);
  try ( FileOutputStream fout = new FileOutputStream("boxser.txt");
     ObjectOutputStream out = new ObjectOutputStream(fout); ) {
    out.writeObject(b1);
   out.flush();
    out.close();
  } catch (Exception e) {
    System.out.println("Unable to Serialize");
  }
```

### Which action serializes the b1 object?

- A. Override readObject() and writeObject() methods in the Book class.
- B. Add serialVersionUID to the Box and Item class.
- C. Handle NotSerializableException in the try clause or throw in the main() method declaration.
- D. Implement the Serializable interface in the Item class.
- E. Remove out.flush() method invocation.

Ans - D, to serialize an object, the class must implement the Serializable interface. This indicates that objects of the class can be converted into a byte stream for storage or transmission. In the provided code, Box contains Item objects, so both Box and Item should implement Serializable.

#### **Ques - 16**

# Which code fragment represent a valid Comparator implementation?

```
    A. public class Comps implements Comparator {
        public boolean compare(Object obj1, Object obj2) {
            return obj1.equals(obj2);
        }
    }
    B. new Comparator() {
            public int compareTo(String str1, String str2) {
                return str1.compareTo(str2);
            }
    }
    C. public class Comps implements Comparator {
                public int compare(String str1, String str2) {
```

```
return str1.length() - str2.length();
}

D. new Comparator() {
    public int compare(String str1, String str2) {
        return str1.compareTo(str2);
    }
}
```

Ans – D (Correct), this fragment correctly implements the compare() method from the Comparator interface, comparing two strings based on their natural ordering.

```
Ques - 19
Given:
public class Option {
  public static void main(String[] args) {
    System.out.println("Ans: " + convert("a").get());
  }
  private static Optional convert(String s) {
    try {
      return Optional.of(Integer.parseInt(s));
    } catch (Exception e) {
      return Optional.empty();
    }
  }
}
```

What is the result?

- A. Ans:
- B. The compilation fails.
- C. Ans: a
- D. A java.util.NoSuchElementException is thrown at runtime.

Ans: D (Correct), The convert("a") method attempts to parse the string "a" into an integer, which throws a NumberFormatException because "a" is not a valid integer. This exception is caught, and Optional.empty() is returned. Calling .get() on an empty Optional result in a java.util.NoSuchElementException at runtime.

## **Ques – 18**

```
public class Tester {
    public static void main(String[] args) {
        String s = "hat at store";
        int x = s.indexOf("at");
        s.substring(x+3);
        x = s.indexOf("at");
        System.out.println(s + " " + x);
    }
}
```

# What is the result?

- A. hat at store 4
- B. hat at store 1
- C. at once 0
- D. at once 1
- E. An IndexOutOfBoundException is thrown at the runtime.

```
Ques-21 class Super {
final int num; //line 1
```

```
public Super (int num) {
                    this.num = num;
                    }
                    final void method() {
                           System.out.println("Output from Super");
             } }
             class Sub extends Super {
                                              //line 2
                    int num;
                                             //line 3
                    Sub(short num) {
                    super(num);
                    }
                    protected void method() //line 4 {
                    System.out.println("Output from Sub");
             } }
Which line of the code results in a compilation error?
A. line n1
B. line n2
C. line n3
D. line n4
Ans- D (Correct), Final method cannot be overridden.
Ques 22.
      public class Foo {
             public void foo(Collection arg) {
             System.out.println("Bonjour le monde! ");
      }
```

```
}
And
public class Bar extends Foo {
       public void foo(List arg) {
             System.out.println("Hello world!);
       }
       public static void main(String... args) {
              List<String> li = new ArrayList<>();
             Collection<String> co = li;
              Bar b = new Bar();
             b.foo(li);
             b.foo(co);
       }
}
   What is the output?
   A. Hello world!
       Bonjour le monde!
   B. Bonjour le monde!
       Bonjour le monde!
   C. Bonjour le monde!
       Hello world!
   D. Hello world!
       Hello world!
```

```
public class Test {
       public static void main (String... args) {
              int number = 20;
              Predicate<Integer> p = a -> a\%2 != 0;
              //line 1
                    System,out,println(number + " is odd. " );
              } else {
                    System.out.println(number + "is even. ");
              }
       }
}
Which statement on line 1 enables the Test class to compile?
   A. If(p.accept (number)) {
   B. If(p.apply (number) ) {
   C. If(p.get (number) ) {
   D. If(p.test (number) ) {
Ques 23 -
public interface Builder {
       public A build (String str);
}
                                                        Not sure, please cross-check.
And
public class BuilderImpl implements Builder {
       @Override
       public B build(String str) {
              return new B(str);
```

```
}
```

# If this code complies correctly, which three statements are true?

- A. A is a subtype of B.
- B. A cannot be abstract.
- C. A cannot be final.
- D. B cannot be abstract.
- E. B is a subtype of A.
- F. B cannot be final.

# **Ques 17-**

```
public class StrBldr {
    static StringBuilder sb1 = new StringBuilder("yo ");
    static StringBuilder sb2 = new StringBuilder("hi ");
    public static void main(String[] args) {
        sb1 = sb1.append(new StrBldr().foo(new StringBuilder("hey")));
        System.out.println(sb1);
    }

StringBuilder foo(StringBuilder s) {
        sb2 = sb2.append(s+ " oh ");
        return sb2;
}
```

```
}
What is the result?
   A. hey oh yo hi
   B. yo hi
   C. hey oh hi yo
   D. A compile time error occurs.
   E. yo hi hey oh
Ques 25.
package test.t1;
 public class A {
       public int x = 42;
       protected A() { }
                              //line1
}
And
package test.t2;
import test.t1.*;
public class B extends A {
      int x = 17;

```

### **24.** Given:

```
List original = new ArrayList<>(Arrays.asList(1,2,3,4,5));
Which two code fragments remove the elements from the original list?
Options:
```

- Queue clq = new ConcurrentLinkedQueue<>(original);
   for(Integer w : clq)
   clq.remove(w);
- 2) List s1 = Collections.synchronizedList(original);

```
for(Integer w : s1)
s1.remove(w);

3) List a1 = new ArrayList<>(original);
for(Integer w : a1)
a1.remove(w);

4) List cwa = new CopyOnWriteArrayList<>(original);
for(Integer w : cwa)
cwa.remove(w);
```

**27.** A company has an existing Java app that includes two Java 8 jar files , sales-8.10.jar and clients-10.2.jar.

The jar file, sales-8.10.jar, references packages in clients-10.2.jar, but clients-10.2.jar does not reference packages in sales-8.10.jar.

They have decided to modularize clients-10.2.jar.

Which module-info.java file would work for the new library version clients-10.3.jar?

# Options:

- module com.company.clients {
   exports com.company.clients.Client;
   }
   module com.company.clients {
   requires com.company.clients;
   }
   module com.company.clients {
   uses com.company.clients;
   }
   module com.company.clients;
   }
- 4) module com.company.clients { exports com.company.clients;

```
26. Given:
      package a;
      abstract class A {
      void print() {
      System.out.print("Base Class");
      }
      }
      And
      package a;
      public class B extends A {
      protected void print() {
      System.out.print("Derived Class");
      }
      public static void main(String args[])
      {
      Bb = new B();
      ((A)b).print();
      }
      What is the output?
      1) The compilation fails.
      2) An exception is thrown at runtime.
```

- 3) Derived Class
- 4) Base Class

```
29. Given the code fragment:
      Locale I = new Locale("en", "US");
      LocalDate today = LocalDate.of(2018, 12, 17);
      String mToday =
today.format(DateTimeFormatter.ofLocalizedDate(FormatStyle.MEDIUM));
      String sToday =
today.format(DateTimeFormatter.ofLocalizedDate(FormatStyle.SHORT));
      System.out.println(mToday);
      System.out.println(sToday);
      What is the output?
      1) December 17, 2018
         12/17/18
      2) Dec 17, 2018
         12/17/18
      3) Friday, December 17, 2018
         December 17, 2018
      4) 12/17/18
         Dec 17, 2018
24. Given:
      public class Option {
```

public static void main(String[] args) {

System.out.println("Ans : "+ convert("a").get());

```
}
      private static Optional convert(String s){
      try {
      return Optional.of(Integer.parseInt(s));
      } catch (Exception e) {
      return Optional.empty();
      }
      }
      }
Options:
   1) A java.util.NoSuchElementException is thrown at runtime.
   2) Ans:a
   3) Ans:
   4) The compilation fails
26. Given the code fragment :
module citizen {
exports com.name to greeting;
And
module greeting {
```

Which statement is true?

}

}

1) Public members in the com.name package are accessible to all modules.

- 2) All members in the com.name package are accessible only to the greeting module.
- 3) Inserting "requires citizen" at greeting's module-info.java, enables com.name members accessible to the greeting module.
- 4) All members of com.name are accessible only to the citizen and greeting module.
- 5) Public members in the com.name package are accessible only to the greeting module.
- **30.** Which declaration of an annotation type is legal?

Options:

```
1) @interface Author {
   String name() default "";
   String date();
2) @interface Author {
   String name() default null;
   String date();
3) @interface Author {
   String name();
   String date default "";
   }
4) @interface Author {
   String name();
   String date;
   }
5) @interface Author extends Serializable{
   String name() default "";
   String date();
   }
```

**29.** Given the code fragment :

```
9. Integer[] ints = \{1,2,3,4,5,6,7\};
```

```
    var list = Arrays.asList(ints);
    UnaryOperator<Integer> uo = x -> x * 3;
    list.replaceAll(uo);
    Options:
    UnaryOperator<Integer> uo = var x -> {return x * 3; };
    UnaryOperator<Integer> uo = x -> { return x * 3 };
    UnaryOperator<Integer> uo = (int x) -> x * 3;
    UnaryOperator<Integer> uo = (var x) -> (x * 3);
```

27. Which two can be considered good practices for serializing Java objects?

### Options:

- 1) Assign null value by default while serializing and deserializing a transient variable.
- 2) Ensure that the class definition used is the same as the class definition used by Java runtime the time when the object was serialized.
- 3) Implement secure serialization by generating secure object hash or using encryption.
- 4) Always override the readObject/writeObject methods from the java.io.Serializable interface.
- 5) Implement serialization for long term data storage.

#### **43.** Given:

```
import java.util.function.BiFunction;
public class Pair {
final BiFunction validator;
T left = null;
T right = null;
private Pair() {
validator = null;
```

```
}
Pair(BiFunction v, T x, T y) {
validator = v;
set (x, y);
}
void set(T x. T y) {
if (!validator.apply(x, y)) throw new IllegalArgumentException
setLeft(x);
setRight(y);
}
void setLeft(T x) {
left = x;
}
void setRight(T y) {
right = y;
}
final boolean isValid() {
return validator.apply(left , right);
}
It is required that if p instanceof Pair then p.isValid() returns true.
Which is the smallest set of visibility changes to ensure this requirement is met?
```

## Options:

- 1) left,right,setLeft and setRight must be private.
- 2) setLeft and setRight must be protected.
- 3) isValid must be public

## 4) left and right must be private.

```
45. Given:
class Item {
public String name; public int count;
public Item(String name, int count) {
this.name = name; this.count = count;
}
}
And the code fragment:
public class Test {
public static void main(String[] args) {
var items = List.of(new Item("A",10),new Item("B",2),new Item("C",12),new
Item("D",5),new Item("E",6));
//Line 1
System.out.println("There is an item for which the variable count is below zero");
}
}
}
You want to examine the items list if it contains an item for which the variable count
is below 0?
Options:
   1) if(items.stream().allMatch(i -> i.count < 0)) {
   2) if(items.stream().filter(i -> i.count < 0).findAny()) {
   3) if(items.stream().anyMatch(i -> i.count < 0)) {
   4) if(items.stream().filter(i -> i.count < 0).findFirst()) {
```

```
String s1 = new String("Java");
String s2 = s1.intern();
StringBuilder sb1 = new StringBuilder("Java");
String s3 = sb1.toString();
System.out.println(s1 == s2);
System.out.println(s1.equals(sb1.toString()));
System.out.println(s2 == s3);
What is result?
A. False true True
B. True False True
c. False True False
d. False False False
5.
Given the content from the courses.txt file:
123:Java:1
124:MYSQL:2
125:Java Server Pages: 3
Given the code fragment:
Path filePath = Paths.get("Course.text");
try {
```

```
/*line 1*/
}catch (IOException ex) {
System.out.format("File IO Exception is thrown.", ex);
}
Which code fragment at line 1 prints the lines that contain java from the course.txt
file
List<String> lines2 = Files.readAllLines(filePath).filter(s->
s.contains("Java");
for(String line: lines2) {
System.out.println(line);
}
List<String> lines1 = Files.readAllLines(filePath).contains("Java");
for(String line: lines2) {
System.out.println(line);
}
System.out.println(Files.readString(filePath.contains("Java"));
Files.lines(filePath).filter(s->
s.contains("Java")).forEach(System.out::println);
Files.lines(filePath).map(s->
s.contains("Java")).forEach(System.out::println);
```

```
public interface ExampleInterface {
       int one = 1;
       static int two = 2;
       static final int three = 3;
}
public class ExampleClass implements ExampleInterface{
       public static void main(String[] args) {
              ExampleInterface theInstance = new ExampleClass();
//line 1
}
Which three statements cause compile error when inserted at line 1?
int d = ExampleInterface.one;
int b = two;
int c = three;
int f = ExampleInterface.three;
int h = theInstance.two;
```

```
int i = theInstance.three++;
int e = ExampleInterface.two++;
int a = one++;
int g= theInstance.one;
35.
Which three initialization statemenrs are correct?
boolean false = (4 !=4);
short sh = (short)'A';
int x = 12_34;
int[][][] e = ((1,1,1), (2,2,2));
String contact# = "(+2) (999) (232)";
float x = 1f;
byte b = 10;
char c = b;
1.
Examine this excerpt from the declaration of the java.se module:
module java.se {
requires transitive java.xml;
• • •
}
What does the transitive modifier mean?
Any module that requires the java.xml module does not need to require the java.xml
```

Any module that attempts to require the java.se module actually requires the java.xml module instead

Any module that requires the java.se module does not need to require the java.xml.

Only a module that requires the java.se module is permitted to require the java.xml

25.

Which two statements are correct about modules in java?

By default, modules cam access each other as long as they run in the same folder.

java.base exports all of the java platforms core packages.

module-info.java cannot be empty.

A module must be declared in module-info.java file.

module-info.java can be placed in any folder inside module-path.

```
3.
public class TripleThis {
    public static void main(String[] args) {
        Function tripler = x -> { return (Integer) x +3; };
        TripleThis.printValue(tripler, 4);
    }
    public static void printValue(Function f, T num) {
        System.out.println(f.apply(num));
    }
}
```

```
Compiling TripleThis.java gives this compiler warning:
Note: TripleThis.java uses unchecked or unsafe Operations.
Which two replacements remove this compiler warning and prints 12?
Replace line 12 with public static void printValue(Function f, T num) {
Replace line 9 with Function tripler = x \rightarrow \{\text{return } x^*3; | \}
Replace line 9 with Function tripler = x - {return x = 3;}
Replace line 12 with public static void printValue(Function f, Integer num) {
Replace line 12 with public static void printValue(Function f, int num) {
Replace line 9 with Function tripler = x-> {return (Integer) x*3; }
2.
public class Main {
       public static void main(String[] args) {
    try {
        Path path = Paths.get("/u01/work");
                     //line 1
       System.out.println(attributes.isDirectory());
       }catch(IOException e) {
              e.printStackTrace();
       }
       }
}
```

You want to examine whether path is a directory.

```
Which code inserted on line 1 will accomplish this?
BasicFileAttribute attributes = Files.readAttributes(path, FileAttributes.class);
BasicFileAttribute attributes = Files.getAttribute(path, "isDirectory");
BasicFileAttribute attributes = Files.isDirectory(path);
BasicFileAttribute attributes = Files.readAttributes(path, BasicFileAttributes.class);
5.
Assuming the user credentials are correct, which expression will be correct?
DriverManager.getConection("jdbc.derby.com")
DriverManager.getConnection()
DriverManager.getConection("jdbc.derby:com")
DriverManager.getConection("http://database.jdbc.com", "J Smith", "dt12%2f3")
DriverManager.getConection("J Smith", "dt12%2f3");
IntStream.range(1,4)
             .peek(System.out::print)
             .peek(i-> {
               if(i == 3)
                     throw new RuntimeException("Exception");
             });
```

What is the result?

The program prints: 123 and the RuntimeException is thrown.

## The program prints nothing

The program prints: 12 and the RuntimeException is thrown.

The program prints 1234 and a java.lang.lllegalStateException is thrown.

You want to read data through the reader object.

Which statement inserted on line 1 will accomplish this?

```
reader.read(characters);
reader.readLine();
characters = reader.read();
characters.read();
8.
```

```
var h = new HashMap();
```

```
String[] k = {"1", "2", null, "3"};
String[] v = {"a", "b", "c", null};
for (int i =0; i<4; i++) {
  h.put(k[i], v[i]);
  System.out.print(h.get(k[i]) + " ");
}
What is result?
a b c
a b c followed by an exception
<mark>a b c null</mark>
a b followed by an exception.
10.
int i =10;
do {
       for(int j =i/2; j>0; j--) {
               System.out.print(j + " ");
       }
       i-=2;
               }
```

```
while(i>0);
What is result?
5
54321
nothing
543214321321211
9.
public class mcqs {
      public static void main(String[] args) {
    var list = new ArrayList(
                           List.of("Coffee", "Cappucino", "Latte"));
             list.forEach((item) -> {;
               list.remove(item);
             });
             System.out.println(list);
      }
}
What is result?
It prints null
A java.util.ConcurrentModificationException is thrown
```

```
It prints[]
[Coffee, Cappucino, Latte]
A java.lang.NullPointerException is thrown.
```

```
45.
class Item {
       public String name;
       public int count;
       public Item(String name, int count) {
              this.name = name;
              this.count = count;
       }
}
public class mcqs {

```

# Page number:82

Why would you choose to use a peek operation instead of a forEach operation on a Stream

To process the current item and return void.

To remove an item from the end of the stream.

To remove an item from the beginning of the stream.

To process the current item and return a stream.

# Page number:83

#### Given

public interface ExampleInterface {

```
int one = 1;
                      static int two = 2;
                      static final in three = 3;
}
public class ExampleClass implements ExampleInterface {
                      public static void main(String[] args) {
                           ExampleInterface theInstance = newExampleClass();
                           //line 1
                           }
}
Which three statements cause a compiler error when inserted at line 1?
int d = ExampleInterface.one;
int b = two;
int c = three;
int f = ExampleInterface.three++;
int h = theInstance.two;
int i = theInstance.three++;
int e = ExampleInterface.two++;
int a = one++;
int g = theInstance.one;
PageNumber:84
class Super{
                      final int num; //line n1
                      public Super(int num) {
                           this.num=num;
```

```
}
                      final void method() {

What is the result?
a. The compilation fails at line 9.
b. The compilation fails at line 16.
c.10
d. The compilation fails at line 13.
```

e.1

```
112.
```

```
import java.beans.PropertyChangeEvent;
import java.beans.PropertyChangeListener;
import java.beans.PropertyChangeSupport;
public class Main {
  private final PropertyChangeSupport pcs = new PropertyChangeSupport(this);
  private String name = "Test";
  public String getName() {
    return name;
  }
  public void setName(String name) {
    String oldName = this.name;
    this.name = name;
    pcs.firePropertyChange("Name", oldName, name);
  }
  public void addListener(PropertyChangeListener listener) {
    pcs.addPropertyChangeListener(listener);
  }
  public static void main(String[] args) {
    Main main = new Main();
    main.addListener(new PropertyChangeListener() {
      public void propertyChange(PropertyChangeEvent event) {
        System.out.println("Changed to " + event.getNewValue());
      }
```

```
});
    main.setName("Java");
 }
}
What is the result?
1.The compilation fails
2.changed to Test
3.changed to Java
4.nothing
113. Given the code fragment:
var i = 10;
var j = 5;
i += (j * 5 + i) / j - 2;
System.out.println(i);
What is the result?
1.11
2.15
3.23
4.21
5.5
```

114. Given the code fragment:

```
module citizen {
  exports com.name to greeting;
}
module greeting {
}
Which statement is true?
1.All members of com.name are accessible only to the citizen and greeting modules.
2. All members in the <u>com.name</u> package are accessible only to the greeting module.
3.Inserting "requires citizen;" at greeting's module-info.java,
enables com.name members accessible to the greeting module.
4.public members in the com.name package are accessible only to the greeting
module.
5. public members in the com.name package are accessible to all modules.
115. Which module defines the foundational APIs of the Java SE Platform?
1.java.lang
2.java.object
3.java.se
4.java.base
116. Which module is required for any application using Swing or AWT?
1.java.rmi
2.java.prefs
```

```
3.java.logging
4.java.se
5. java. desktop
117. Given the code fragment:
public class Main {
  public static void main(String[] args) {
    try {
       Path path = Paths.get("/u01/work");
      // line 1
       System.out.println(attributes.isDirectory());
    } catch (IOException e) {
      e.printStackTrace();
    }
  }
}
You want to examine whether path is a directory.
Which code inserted on line 1 will accomplish this?
1.BasicFileAttributes attributes = Files.getAttribute (path, "isDirectory");
2.BasicFileAttributes attributes = Files.readAttributes (path,
FileAttributes.class);
```

```
3. BasicFileAttributes attributes = Files.readAttributes (path,
BasicFileAttributes.class);
4.BasicFileAttributes attributes= Files.isDirectory(path);
118. Given the code fragment:
public class Test {
  class L extends Exception {
  }
  class M extends L {
  }
  class N extends RuntimeException {
  }
  public void p() throws L {
    throw new M();
  }
  public void q() throws N {
    throw new N();
  }
  public static void main(String[] args) {
    try {
      Test t = new Test();
      t.p();
      t.q();
    } /* line 1 */ {
```

```
System.out.println("Exception caught: ");
    }
  }
}
What change on line 1 will make this code compile?
1.Add catch (M | Le)
2.Add catch (L | N e)
3.Add catch (N \mid L \mid M e)
4.Add catch (L e)
5.Add catch (L | M | N e)
119. Which two expressions create a valid Java Path instance?
1.new Path("foo")
2.Paths.get(URI.create("file:///domains/oracle/test.txt"))
3.Path.get(new URI("file:///domains/oracle/test.txt"))
4.Paths.getPath("too")
5.Paths.get("foo")
120. Given the code fragment:
    StringBuilder txt1 = new StringBuilder("PPQRRRSTT");
    int i = 0;
    a:
    while (i < txt1.length()) {
```

```
char x = txt1.charAt(i);
int j = 0;
i++;
b:
while (j < txt1.length()) {
   char y = txt1.charAt(j);

   if (i != j && y == x) {
        txt1.deleteCharAt(j);
        // line 1
    }
   j++;
}</pre>
System.out.println(txt1);
```

Which two statements inserted independently at line 1 enable this code to print PRRT?

```
1.break b;
```

2.i--;

3.j--;

# 4.continue b;

5.continue a;

6.break a;

```
public interface InterfaceOne {
  public void methodA();
  public void methodB();
}
public interface InterfaceTwo extends AbstractClass {
}
public abstract class AbstractClass implements InterfaceOne {
  public String origin = "Abstract Class";
  public void methodA() {
    System.out.println("A");
  }
  public abstract void methodC();
}
and
public class ConcreteClass extends AbstractClass {
  public void methodC(String c) {
    System.out.println(c);
  }
}
Which three changes make this code compile?
1.Implement methodC() in ConcreteClass
2.Remove methodA () from AbstractClass
3.Implement methodB () in Concreteclass
4.Implement methodA() in Concreteclass
5.Add the keyword abstract to the methodA () and methodB () declarations in
InterfaceOne
6.Remove methodA () from InterfaceOne
```

# 7.InterfaceTwo should no longer extend AbstractClass

```
Page No: 122
Question 32:
Given:
public enum Status {
       BRONZE(5), SILVER(10), GOLD(15);
       private int rate;
       private Status(int rate) {
              this.rate = rate;
       }
       public int getRate() {
              return rate;
       }
       public Status addStatus(int rate) {
              return new Status(20);
              }
}
and
public class Test {
       public static void main(String[] args) {
              Status silver = Status. SILVER;
              System.out.println(silver + silver.getRate());
              Status platinum = <u>Status.addStatus(20)</u>;
              System.out.println(platinum + platinum.getRate());
       }
}
```

```
What is the result?
   A. SILVER10
      PLATINUM20
   B. SILVER10
      20
   C. An exception is thrown at runtime.
   D. SILVER10
      platinum20
   E. The compilation fails.
Page No: 123
Question 31:
Given:
public interface API { //line 1
      public void checkValue (Object value)
                    throws IllegalArgumentException; //line 2
      public boolean isValueANumber (Object val) {
             if (val instanceof Number) {
                    return true;
             }else {
                    try {
```

```
Double.parseDouble(val.toString());
                           return true;
                    }catch (NumberFormatException ex) {
                           return false;
                    }
             }
      }
}
Which two changes need to be made to make this class compile?
   A. Change Line 2 to an abstract method:
      public abstract void checkValue (Object value)
             throws IllegalArgumentException;
   B. Change Line 1 to an abstract class:
      public abstract class API {
   C. Change Line 1 to extend java.lang.AutoCloseable:
       public interface API extends AutoCloseable {
   D. Change Line 1 to a class:
       public class API {
   E. Change Line 2 access modifier to protected:
       protected void checkValue (Object value)
             throws IllegalArgumentException;
```

### Question 34:

```
Which three initialization statements are valid?
   A. var loc Set.of("UK", "US");
   B. var loc = Map.of("UK", 1, "US", 2);"
   C. var loc List.of("UK", "US");
   D. var loc = Set.of("UK", "US", "UK");
   E. var loc = ArrayList.of("UK", "US");
   F. var loc = Arrays.of("UK", "US", "ES");
   G. var loc = List.of("UK", null, "US");
Page No. 125
Question 33:
Given:
List<Integer> myList = Arrays.asList(9,8,9,2,7,2);
Which statement prints 2789?
   A. myList.stream()
       .collect (Collectors.toCollection (SortedSet::new))
       .stream().forEach (x -> System.out.print(x));
   B. myList.stream()
       .collect (Collectors.toCollection (TreeSet::new))
       .stream().forEach (x -> System.out.print(x));
   C. myList.stream()
       .distinct()
```

forEach (x -> System.out.print(x));

```
D. myList.stream()
       .collect (Collectors.toCollection (HashSet::ngw))
       .sorted().forEach (x -> System.out.print(x));
Page No. 126
Question 35:
Given the code fragment:
public static void main(String[] args) {
       List even = List.of();
       even.add(0, -1);
      even.add(0, -2);
       even.add(0, -3);
       System.out.println(even);
}
What is the output?
   A. The compilation fails.
   B. A runtime exception is thrown.
   C. [-1, -2, -3]
   D. [-3, -2, -1]
Page No. 127
Question 37:
class ConSuper {
       protected ConSuper() {
```

```
this(2);
             System.out.print("3");
        }
       protected ConSuper (int a) {
             System.out.print(a);
       }
}
and
public class ConSub extends ConSuper{
      ConSub () {
             this (4);
             System.out.print("1");
       }
      ConSub (int a) {
             System.out.print(a);
       }
       public static void main(String[] args) {
             new ConSub (4);
       }
}
What is the result?
   A. 2134
   B. 214
   C. 2314
   D. 234
```

### Question 36:

```
Given:
class Test {
      void display(int i) {
             System.out.println("one");
      }
      void display (long l) {
             System.out.println("two");
      }
      public static void main(String[] args) {
             new Test().display(0B1010_0101_1001_0110);
      }
}
What is the result?
   A. The compilation fails.
   B. one
   C. A NumberFormatExcpetion is thrown at runtime.
   D. Two
```

**Page No: 129** 

# Question 38:

Your organization provides a cloud server to your customer to run their Java code. You are reviewing the changes for the next release and you see this change in one of the config files:

```
old: JAVA_OPTS="$JAVA_OPTS -Xms8g -Xmx8g"

new: JAVA OPTS="$JAVA_OPTS -Xms8g -Xmx8g -noverify"
```

### Which is correct?

- A. You reject the change because -Xms8g -Xmx8g uses too much system memory.
- B. You accept the change because noverify is necessary for your code to run with the latest version of Java.
- C. You reject the change because noverify is a critical security risk.
- D. You accept the change because -noverify is a standard option that has been supported since Java 1.0.

```
Page No: 130
Question 39:
Given the code fragment:
public class FileHandler{
       public static void main(String[] args) {
              try (FileInputStream in = new FileInputStream("foo.txt")) { }
              catch (FileNotFoundException e) {}
       }
}
Which two actions, independently, enable the code to compile?
Replacing the catch block with:
   A. catch (FileNotFoundException | Exception e) { }
       finally { in.close(); }
   B. Inserting:
       finally { in.close(); }
   C. Replacing the catch block with:
       catch (Exception e) {}
```

D. Adding throws IOException declaration at the main () method

```
E. Replacing the catch block with:
catch (Exception | IOException e) {}
```

F. Adding throws FileNotFoundException declaration at the main () method

```
Page No: 131
```

## Question 41:

- A. Java
- B. Oracle

What is the result?

- C. Compilation error
- D. An exception is thrown at run time.

Page No: 132

## Question 40:

Given the code fragment:

```
Supplier supplier = () -> "Hello World";
```

```
// line 1
```

Which statement on line 1 is calling the method of the supplier object correctly?

- A. System.out.println(supplier.test());
- B. System.out.println(supplier.accept());
- C. System.out.println(supplier.get());
- D. System.out.println(supplier.apply());

## **Page No: 133**

### Question 43:

```
Given the code fragment:
```

```
/* line n1 */
A() {
       super ("The Mandatory Criteria Yet to Meet");
       }
}
15. public class TestCE {
16. public static void main(String[] args) throws A {
17.
       int a = 10, b = 13;
18.
       try {
              if (a < b) {
19.
20.
                     throw new A();
              }
21.
22.
       }
23.
       catch (Exception e) { System.out.println(e); }
24.
       System.out.println("Continue...");
25.
       )
```

You must define the A exception class. The program execution must be terminated if the condition a is true and an A exception is thrown at line 20.

Which code fragment at line n1 defines A as per the requirement?

- A. class A extends RuntimeException (
- B. class A extends Exception {
- C. class A extends Throwable {
- D. class A extends ArithmeticException {

**Page No: 134** 

### Question 42:

```
Given the code fragment:
```

Locale locale = Locale.US;

// line 1

double currency = 1\_00.00;

System.out.println(formatter.format(currency));

You want to display the value of currency as \$100.00.

Which code inserted on line 1 will accomplish this?

- A. NumberFormat formatter = NumberFormat.getInstance(locale);
- B. NumberFormat formatter = NumberFormat.getCurrency (locale);
- C. NumberFormat formatter = NumberFormat.getInstance(Locale).getCurrency();
- D. NumberFormat formatter = NumberFormat.getCurrencyInstance (locale);

**Page No: 135** 

Question 21:

Given:

```
public class Tester {
       public static void main(String[] args) {
              String s = "hat at store";
              int x = s.indexOf("at");
              s.substring(x + 3);
             x= s.indexOf("at");
              System.out.println(s+ " " + x);
              }
}
What is the result?
   A. at once 1
   B. hat at store 4
   C. at once 0
   D. An IndexOutOfBoundsException is thrown at runtime.
   E. hat at store 1
Page No: 136
Question 19:
Given:
public class Person {
       private String name = "Green";
       public void setName(String name) {
              String title = "Mr. ";
              this.name = title + name;
       }
       public String toString() {
              return name;
```

```
}
}
and
public class Test {
      public static void main(String args[]) {
             Person p = new Person();
             p.setName("Blue");
             System.out.println(p);
      }
}
What is the result?
   A. An exception is thrown at runtime.
   B. Mr. Blue
   C. Mr. Green
   D. Green
```

```
Pg no: 137

25. Given:

package com.lti.multithreading;

public interface Converter {

   public static final double POUNDS_PER_KILOGRAM = 2.20462; //Line 1
```

```
public double tare();
       public double net();
       public default double gross() { //line 2
              return tare() + net();
       }
       public default double tare(String units) {
              return toUnit(tare(),units);
       }
       public default double net(String units) {
              return toUnit(net(),units);
       }
       public default double gross(String units) {
              return toUnit(gross(),units);
       }
       private static double toUnit(double kilograms, String unit) { //line3
              switch(unit) {
                    case "KILO": return kilograms;
                    case "POUND" : return kilograms * POUNDS_PER_KILOGRAM;
                    default : throw new IllegalArgumentException();
              }
       }
}
Which is true?
   A. It compiles without errors.
   B. Line 3 is the first line to cause a compilation error.
```

C. Line 2 is the first line to cause a compilation error.

D. Line 1 is the first line to cause a compilation error.

```
Pg no: 138
      24. Given:
      public class A {
             int a = 0;
             int b = 0;
             int c = 0;
             public void foo(int i) {
                    a += b*i;
                    c -= b*i;
             public void setB(int i) {
                    b = i;
             }
      }
      Which makes class A thread safe?
      A. Make foo and setB synchronized.
      B. Class A is thread safe.
      C. Make setB synchronized.
      D. Make foo synchronized.
      E. Make A synchronized.
Pg no :139
26.Given:
Public interface ExampleInterface{ }
Which two statements are valid to be written in this interface?
   A. final void methodG() {
             System.out.println("G");
      }
   B. public String methodD();
   C. final void methodE();
   D. public int x;
   E. private abstract void methodC();
```

```
F. public void methodF() {
              System.out.println("F");
      }
   G. public abstract void methodB();
pg no: 140
29. Given
List<String> states = List.of("NY", "CA", "WA", "NC", "CO");
states.forEach(s -> System.out.println(s)); // line 1
Which statement is equiva lent to line 1?
   A. States.forEach((var s) -> System.out.println(s));
   B. States.forEach(var s -> {System.out.println(s)});
   C. States.forEach(String s -> {System.out.println(s);});
   D. States.forEach((s) -> System.out.println(s););
Pg no: 141
1.Given:
public class StrBldr {
      static StringBuilder sb1 = new StringBuilder("yo ");
      static StringBuilder sb2 = new StringBuilder("hi ");
       public static void main(String[] args) {
              sb1 = sb1.append(new StrBldr().foo(new StringBuilder("hey")));
              System.out.println(sb1);
      }
      StringBuilder foo(StringBuilder s) {
             sb2 = sb2.append(s + " oh ");
              return sb2;
      }
}
```

```
What is the result?
A compile time error occurs.
yo hi
hey oh hi yo
<mark>yo hi hey oh</mark>
hey oh yo hi
pg no : 142
30.Given:
interface Abacus{
        public int calc(int a, int b);
}
public class Main1 {
        public static void main(String[] args) {
                int result = 0;
                //Abacus aba = (a,b)->a*b;
                //Abacus aba = (int e, int f)->{return e*f;};
                Abacus aba = \underline{v}, w \rightarrow \underline{x} \cdot \underline{y};
                result = aba.calc(10,20);
                System. out. println(result);
        }
```

```
}
```

## Which two codes, independently, can be inserted on line 1 to compile?

```
<u>Abacus aba</u> = (a,b)->a*b;
<u>Abacus aba</u> = (<u>int</u> e, <u>int</u> f)->{return e*f;};
```

Abacus aba = (int m, int n) ->  $\{m*n\}$ ;

Abacus aba = (int I, j) -> { return i\*j;};

Abacus aba =  $v, w \rightarrow x^*y$ ;

## Pg no :143

#### 4. Given:

```
var fruits = List.of("apple","orange","banana","lemon");
```

Optional<String> result = fruits.stream().filter(f->f.contains("n")).findAny();

System.out.println(result.get());

You replace the code on line 1 to use ParallelStream.

#### Which one is correct?

The compilation fails.

A NoSuchElementException is thrown at runtime.

The code will produce the same result.

The code may produce a different result.

## Pg no: 144

## 13. Which two statements are true about a class that is marked @Deprecated?

The class cannot be extended.

Using the class is guaranteed to cause errors at runtime.

There is always another class that can be used instead of the deprecated class.

The author of the class wants to discourage people from using the class in any way.

Using the class will cause the Java compiler to give a warning.

```
Pg no: 145
6. Given the code fragment:
public class Main1 {
       public static void main(String[] args) {
              List<String> fruits = List.of("banana", "orange", "apple", "lemon");
              Stream<String> s1 = fruits.stream();
              Stream<String> s2 = s1.peek(i -> System.out.print(i + " "));
              System. out. println("----");
              Stream<String> s3 = s2.sorted();
              Stream s4 = s3.peek(i -> System.out.print(i + " "));
              System.out.println("----");
              String <a href="strFruits">strFruits</a> = (String) <a href="s4.collect(Collectors.joining(","));
       }
}
What is the output?
   A. -----
       banana orange apple lemon apple banana lemon orange
   C. banana orange apple lemon apple banana lemon orange
   D. banana orange apple lemon
       Apple banana lemon orange
```

```
E. -----
       Banana orange apple lemon
       ----apple banana lemon orange
Pg no: 147
35.Given:
1. public class Test{
2.
       private static class Greet{
3.
              private void print(){
                     System.out.println("Hello World");
4.
              }
6.
       }
       public static void main(String[] args){
7.
8.
              Test.Greet i = new Greet();
9.
              i.print();
10.
       }
11.}
What is the result?
Hello World
The compilation fails at line 9.
The compilation fails at line 2
The compilation fails at line 8.
```

# Pg no: 148

5.

# 14. Given the code fragment from Box. java!

public class Box implements Serializable{

```
private int boxId;
       private String size;
       private List items;
}
Given the code fragment from Item.java:
public class Item{
      private int id;
       private String name;
}
Given the information:
The classes Box and Item are encapsulated with getters and setters methods.
The classes Box and Item contains required constructers source code.
And the code fragment:
public static void main(String[] args) throws IOException{
      List items1 = new ArrayList<>();
      Items1.add(new Item(1,"Pen"));
      Items1.add(new Item(2,"Ruler"));
       Box b1 = new Box(123,"3",items1);
      Try(FileOutputStream fout = new FileOutputStream("boxser.txt");
      ObjectOutputStream out = new ObjectOutputStream(fout);){
      out.writeObject(b1);
      out.flush();
      out.close();
}catch(Exception e){
      System.out.println("Unable to Serialize");
}}
```

## Which action serializes the b1 object?

- A. Implement the Serializable interface in the Item class.
- B. Remove out.flush() method invocation.
- C. Override readObject() and writeObject() methods in the Book class.
- D. Add SerialVersionUID to the Box and Item class.
- E. Handle NotSerializableException in the try clause or throw in the main() method definition.

#### 35. Given:

```
1. public class Test{
2.
       private static class Greet{
3.
              private void print(){
4.
                      System.out.println("Hello World");
5.
              }
6.
       }
7.
       public static void main(String[] args){
8.
              Test.Greet i = new Greet();
9.
              i.print();
10.
       }
11.}
```

## What is the result?

#### A. Hello World

- B. The compilation fails at line 9.
- C. The compilation fails at line 2.
- D. The compilation fails at line 8.

```
37. Given the code fragment:
vari = 1;
var result = IntStream.generate(()->{return I;})
              .limit(100).sum();
System.out.println(result);
Which statement prints the same value of result?
   A. System.out.println(IntStream.range(0,99).count());
   B. System.out.println(IntStream.rangeClosed(0,100).map(x->x).count());
   C. System.out.println(IntStream.rangeClosed (1,100).count());
   D. System.out.println(IntStream.range(1,100).count());
Pg no: 150
36. Given TripleThis.java:
6.import java.util.function.*;
7.public class TripleThis {
8.
       public static void main(String[] args) {
9.
              Function tripler = x - \{return (Integer)x^*3;\};
10.
              TripleThis.printValue(tripler,4);
       }
11.
12.
       public static void printValue(<u>Function</u> f, <u>T</u> num) {
13.
              System.out.println(f.apply(num));
14.
       }
15. }
Compiling TripleThis.java gives this compiler warning:
Note: TripleThis.java uses unchecked or safe operations.
Which two replacements remove this compiler warning and prints 12?
Replace line 12 with public static void printValue(Function f, Integer num){
```

Replace line 12 with public static void printValue(Function f, T num){

# Replace line 12 with public static void printValue(Function f, int num){ Replace line 9 with Function tripler = $x \rightarrow \{return (Integer)x*3;\}$ Replace line 9 with Function tripler = $x \rightarrow \{return x*3;\}$ Replace line 9 with Function tripler = $x \rightarrow \{return \ x*3;\}$ Pg no: 151 **38.Given the code fragment:** public class Main { public static void main(String[] args) throws IOException{ final Reader reader = new FileReader("File1.txt"); try(reader){ reader.read(); //Line 1 }finally { reader.read(); //line 2 } reader.read(); //line 3 } } If file1.txt does exist, what is the result? The program executes and prints nothing. The compilation fails. A java.io.IOException is thrown on line 2. A java.io.IOException is thrown on line 1.

Question: 39 page

no: 153

A java.io.IOException is thrown on line 3.

#### What is the result?

- A) An unchecked exception is thrown at run time.
- B) Error reading files is printed on the console.
- C) The content from filel.txt and file2.txt is printed on the console.
- D) The compilation fails.

Question: 41 page

no: 154

When running jdeps, which three ways include dependent nonmodular jar files?

- A) jdeps -cp lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar
- B) jdeps --class-path lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar
- C) jdeps --module-path lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar
- D) jdeps lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar
- E) jdeps -classpath lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar
- F) jdeps application.jar
- G) jdeps --upgrade-module-path lib/filel.jar:lib/file2.jar:lib/file3.jar application.jar

Question: 40 page

```
no: 155
class ConSuper {
       protected ConSuper() {
             this(2);
             System.out.print("3");
       }
       protected ConSuper(int a) {
             System.out.print(a);
       }
}
public class ConSub extends ConSuper {
       ConSub () {
             this (4);
             System.out.print ("1");
       }
      ConSub (int a) {
             System.out.print (a);
       }
       public static void main(String[] args) {
             new ConSub(4);
       }
}
```

## What is the result?

- A) 214
- B) 2134
- C) 2341

```
Question: 42
                                                                                 page

import java.sql.Timestamp;
public class Test {
       public static void main(String[] args){
              Timestamp ts = new Timestamp (1);
       }
}
and the commands:
javac Test.java
jdeps -summary Test.class
What is the result on execution of these commands?
A) On execution, the jdeps command displays an error.
B) java.sql -> java.base -> Test.class
C) Test.class -> java.base Test.class -> java.sql
D) Test.class -> java.base Test.class -> java.sql java.sql -> java.base
Question: 44
                                                                                 page
no: 157
Given the code fragment:
Stream<Integer> data = IntStream.range (1, 10000).boxed();
Integer sum = data.mapToInt (a -> a).sum(); //line 1
Which two code fragments, independently, replace line 1 to implement the
equivalent reduce operation?
A) Integer sum = data.mapToInt (a \rightarrow a). reduce (0, (a,b)\rightarrowa+b);
B) OptionalInt value = data.mapToInt (a -> a).parallel (). reduce ((a, b) -> a+b);
```

```
Integer <u>sum</u> = value.getAsInt();
C) OptionalInt value = \frac{data.mapToInt}{(a -> a).parallel} ().reduce (0, (a, b) -> a+b);
   Integer <u>sum</u> = value.getAsInt();
D) Integer sum = data.map (a \rightarrow a).reduce ((a, b) \rightarrow a+b);
E) int s = 0;
   Integer \underline{sum} = data.map(a -> a).\underline{reduce}(0, (a -> a+s));
Question: 43
                                                                                       page
no: 158
Given the declaration:
@interface Resource {
       String[] value ();
}
Examine this code fragment:
/* Locl */ class Processorders{...}
Which two annotations may be applied at Locl in the code fragment?
A) @Resource
B) @Resource ({"Customer1", "Customer2"})
C) @Resource (value={{}})
D) @Resource ("Customer1")
E) @Resource
Question: 46
                                                                                       page
no: 159
Which two are valid statements?
A) BiPredicate test = (Integer x, final Integer y) ->(x.equals (y));
B) BiPredicate test = (var x, final var y)-> (x.equals (y));
```

```
C) BiPredicate test = (final var x, y)-> (x.equals(y));
D) BiPredicate test (Integer x, final var y)-> (x.equals(y));
E) Bi Predicate test = (final Integer x, var y) ->(x.equals(y));
Question: 45
                                                                                   page
no: 160
List<Integer> numbers = List.of (2, 3, 0, 8, 1, 9, 5, 7, 6, 4);
int sum = numbers.stream().reduce (0, (n, m) ->n+m); // line 1
You want to make the reduction operation parallelized.
Which two modifications will accomplish this?
A) Replace line 1 with int sum = numbers.stream().parallel().reduce (0, (n, m) -> n +
m);.
B) Replace line 1 with int sum = numbers. parallelStream().reduce (0, (n, m)->n+m);.
C) Replace line 1 with int sum = numbers.stream().iterate (0, a \rightarrow a+1)
                                                             .reduce (0, (n, m)->n+m);.
D) Replace line 1 with int sum = numbers.stream().flatMap (a -> a).reduce (0, (n, m) -
> n
+m);.
E) Replace line 1 with int sum = numbers. parallel ().stream().reduce (0, (n, m) -> n +
m);.
```

```
Question: 47 page no: 161
```

```
public static void main(String... args) {
    String filename = "/u01/work" + args[0]; // line nl
```

You want to validate a path name before the read file. Before validation, all path names should be canonicalized.

Which code inserted on line n1 will accomplish this?

A) Path file Paths.get (filename);

}

Path canonicalPath = file.toAbsolutePath().toString(); FileInputStream fis= new FileInputStream (canonical Path);

B) Path file Paths.get (filename);

String canonicalPath = file.normalize().toString(); FileInputStream fis= new FileInputStream (canonicalPath);

C) File file = new File (filename).getAbsoluteFile();

FileInputStream fis = new FileInputStream (file);

D) File file = new File(filename);

String canonical Path = file.getCanonicalPath();

FileInputStream fis = new FileInputStream(f);

Question: 49 page

no: 162

Assuming that jdbcURL, username, and password are declared and initialised.

try (Connection conn = DriverManager.getConnection(jdbcURL, username,
password);

```
PreparedStatement query = conn.prepareStatement("SELECT ID, NAME FROM EMP
  WHERE DEPT = ?");
  PreparedStatement update = conn.prepareStatement("INSERT INTO RECRUITING
  (ID, NAME) VALUES (?, ?)")) {
  query.setString(1, "HR");
  ResultSet rs = query.executeQuery();
  while (rs.next()) {
    update.setObject(1, rs.getObject(1, Integer.class), JDBCType.INTEGER);
    update.setObject(2, rs.getObject(2, String.class), JDBCType.VARCHAR);
    update.execute();
  }
Which two happen upon execution?
A) A SQLException is thrown because the Resultset is not closed.
B) Three PreparedStatement objects are created.
C) Memory leaks because connection, PreparedStatements, and ResultSet are not
closed.
D) Two PreparedStatement objects are created.
E) Three SQL statements are executed.
F) Two SQL statements are executed.
Question: 48
                                                                             page
no: 163
Given:
1. interface Pastry {
2.
      void get Ingredients();
3.}
4. abstract class Cookie implements Pastry {}
6. class ChocolateCookie implements Cookie {
```

}

```
7. public void getIngredients () {}
8.}
9. class CoconutChocolateCookie extends ChocolateCookie {
10. void getIngredients (int x) {}
11.}
```

#### Which is true?

- A. The compilation fails due to an error in line 6.
- B. The compilation fails due to an error in line 7.
- C. The compilation fails due to an error in line 10.
- D. The compilation fails due to an error in line 2.
- E. The compilation fails due to an error in line 9.
- F. The compilation fails due to an error in line 4.
- G. The compilation succeeds.

super(cause);

```
Question: 50
no: 164 - 165

class ExSuper extends Exception {
    private final int eCode;
    public ExSuper(int eCode, Throwable cause) {
```

```
this.eCode = eCode;
                       }
                       public ExSuper(int eCode, String msg, Throwable cause) {
                                              super(msg, cause);
                                              this.eCode = eCode;
                       public String getMessage() {
                                                                     return this.eCode + ": " + super.getMessage() + "-" +
                                              this.getCause().getMessage();

Pg - 169
Question 7:
-continent
       a.txt
       |- country
              | b.txt
              | - state
                    c.txt
                    |+ county
and
      BiPredicate pred = (path, fileAttrs) -> {
             return fileAttrs.isDirectory();
      };
      int depth = 1;
      try(var stream = Files.find(Paths.get("/continent"),depth,pred)) {
             stream.forEach(System.out::pritnln);
      } catch(IOException e) { }
What is the result?
   A. /continent
      /continent/country
      /continent/country/state
      /continent/country/state/county
   B. /continent
      /continent/country
   C. /continent/country/state
```

## Pg – 170 Question 15 :

D. /continent/country/state/county

```
class MyPersistenceData{
          String str;
          private void methodA() {
                System.out.println("methodA");
          }
}
```

You want to implement the java.io. Serializable interface to the MyPersistenceData class.

#### Which method should be overridden?

- A. The readExternal and writeExternal method.
- B. Nothing
- C. The readExternal method
- D. The writeExternal method

## Pg – 171 Question 14:

## Which two can be considered good practices for serializing Java objects?

- A. Ensure that the class definition used is the same as the class definition used by Java runtime at the time when the object was serialized.
- B. Always override the readobject/writeObject methods from the java.io.Serializable interface.
- C. Implement serialization for long-term data storage.
- D. Assign null value by default while serializing and deserializing a transient variable.
- E. Implement secure serialization by generating secure object hash or using encryption.

# Pg – 172 Question 16:

```
public class CreateArrayListExample {
    public static void main(String[] args) {
        List vegetables = new ArrayList<>();
        vegetables.add("Kale");
        vegetables.add(0,"Lettuce");
        System.out.println(vegetables);
        List fish = new ArrayList<>();
        fish.add("Salmon");
```

```
fish.add(0,"Seabass");
              System.out.println(fish);
       }
}
What is the result?
   A. A compilation error is thrown
   B. [Lettuce, Kale]
       [Seabass, Salmon]
   C. [Lettuce, Kale]
   D. [Kale, Lettuce]
       [Salmon, Seabass]
Pg - 173
Question 17:
var h = new HashMap();
String[] k = { "1", "2", null, "3" };
String[] v = { "a", "b", "c", null };
for (int i = 0; i < 4; i++) {
       h.put(k[i], v[i]);
       System.out.println(h.get(k[i]) + " ");
}
What is the result?
   A. abcnull
   B. abc
   C. a b followed by an exception
   D. a b c followed by an exception
```

# Pg – 174 Question 26:

```
public interface ExampleInterface { }
```

#### Which two statements are valid to be written in this interface?

# Pg – 175 Question 18:

```
new Color("Yellow",75));
              Comparator hueSrtr = (h1, h2) -> h1.hue.compareTo(h2.hue);
              Comparator valueSrtr = (h1, h2) -> { if ( h1.value >= h2.value) {
                                                                      return 1;
                                                       } else {
                                                               return -1;
                                                       }
                                                };
      clrs.sort(hueSrtr.thenComparing(valueSrtr));
      System.out.println(clrs);
}
What is the result?
   A. [Red:100, Red:75, Yellow:75, Yellow: 50]
   B. [Red:75, Red:100, Yellow:50, Yellow:75]
   C. [Yellow:50, Yellow: 75, Red:75, Red:100]
   D. An Exception is thrown at runtime
   E. [Yellow:75, Yellow: 50, Red:100, Red:75]
Pg - 176
Question 27:
public interface APIInterface {
       public default void process() { System.out.println("Process() called 1."); }
}
and
public abstract class AbstractAPI {
       public abstract void process();
}
and
public class ApiImpl extends AbstractAPI implements APIInterface {
       public void process() {
              System.out.println("Process() called 2.");
```

```
}
       public static void main(String[] args) {
              var impl = new ApiImpl();
              impl.process();
       }
}
What is the result?
   A. A java.lang.NoSuchMethodException is thrown
   B. A java.lang.IllegalAccessException is thrown
   C. The compilation fails
   D. The program prints Process() called 2.
   E. The program prints Process() called 1.
Pg - 177
Question 29:
List<String> states = List.of("NY", "CA", "WA", "NC", "CO");
states.forEach(s -> System.out.println(s)); //line1
Which statement is equivalent to line 1?
   A. states.forEach((var s) -> System.out.println(s));
   B. states.forEach(var s -> System.out.println(s));
   C. states.forEach((String s) ->{ return System.out.println(s);)};
   D. states.forEach((s) -> System.out.println(s););

```

private static int y;

```
public static void main(String[] args) {
               Tester t1 = new Tester();
               t1.x = 2;
               Tester.y = 3;
               Tester t2 = new Tester();
               t2.x = 4;
               t2.y = 5;
               System.out.println(t1.x+","+t1.y);
               System.out.println(t2.x+","+Tester.y);
               System.out.println(t2.x+","+t1.<u>y</u>);
       }
}
What is the result?
    A. 2,3
       4,5
       4,5
   B. 2,5
       <mark>4,5</mark>
       <mark>4,5</mark>
   C. 2,3
       4,3
       4,5
    D. 2,3
       4,5
       4,3
Pg - 179
Question 30:
public interface Abacus {
        public int calc ( int a , int b);
}
public class Main {
       public static void main(String[] args) {
               int result = 0;
               // line 1
```

```
}
Which two codes, independently, can be inserted on line 1 to compile?
    A. Abacus aba = (a, b) -> a*b;
   B. Abacus aba = (int e, int f) -> { return e * f; };
   C. Abacus aba = (int m, int n) \rightarrow { m*n };
   D. Abacus aba = (int i, j) -> {return i * j; };
   E. Abacus aba = v, w \rightarrow x * y;
Pg - 180
Question 31:
public class Foo {
       public void foo(Collection arg) {
               System.out.println("Bonjour le monde!");
       }
}
public class Bar extends Foo{
       public void foo(Collection arg) {
              System.out.println("Hello world!");
       public static void main(String[] args) {
               List<String> li = new ArrayList<>();
               Bar b = new Bar();
               Foo f = b;
               b.foo(li);
               f.foo(li);
       }
}
```

result = <u>aba</u>.calc(10,20); System.**out**.println(result);

}

What is the output?

# A. Hello world! Hello world!

- B. Hello world!
  Bonjour le monde!
- C. Bonjour le monde! Hello world!
- D. Bonjour le monde! Bonjour le monde!

```
Pg – 181 & 183
Question 32:
public class Foo {
```

```
public void foo(<u>Collection</u> arg) {
               System.out.println("Bonjour le monde!");
       }
}
and
public class Bar extends Foo{
       public void foo(Collection arg) {
               System.out.println("Hello world!");
       public void foo(List arg) {
               System.out.println("Ola Mundo!");
       }
}
and
Foo \underline{f1} = new Foo();
Foo \underline{f2} = new Bar();
Bar b1 = new Bar();
```

#### Which three are true?

A. f1.foo(c) prints Bonjour le monde!

Collection<String> c = new ArrayList<>();

- B. f1.foo(c) prints Hello world!
- C. f1.foo(c) prints Ola Mundo!
- D. f2.foo(c) prints Bonjour le monde!
- E. b1.foo(c) prints Bonjour le monde!
- F. f2.foo(c) prints Hello world!
- G. f2.foo(c) prints Ola Mundo!
- H. b1.foo(c) prints Ola Mundo!
- I. b1.foo(c) prints Hello world!

```
Pg - 182
Question 33:
public class Foo {
       public void foo(<u>Collection</u> arg) {
              System.out.println("Bonjour le monde!");
       }
}
and
public class Bar extends Foo{
       public void foo(List arg) {
              System.out.println("Hello world!");
       public static void main(String[] args) {
              List<String> li = new ArrayList<>();
              Collection<String> co = li;
              Bar b = new Bar();
              b.foo(li);
              b.foo(co);
       }
}
```

What is the output?

- A. Hello world! Hello world!
- B. Bonjour le monde! Bonjour le monde!
- C. Hello world!

  Bonjour le monde!
- D. Bonjour le monde! Hello world!

# Pg – 184 Question 34:

```
public class DoClass{
    static String s;
    public static void main(String[] args) {
        switch(s) {
        case "41" : s+="41";
        default : s+=" def ";
        case "42" : s+="42";
        }
        System.out.println(s);
    }
}
```

## What is the output?

- A. 41 def 42
- B. def 42
- C. null
- D. An exception is thrown at runtime.

185: Which module is required for any application using Swing or AWT?

- a. Java.desktop
- b. Java.logging

```
c. Java.se
d. Java.rmi
e. Java prefs
186: Given the code fragment
Lomate Locale = Locale.US;
// line 1
double currency = 100.00;
System.out.println(formatter.format (currency));
You want to display the value of currency as $100.00.
Which code inserted on line 1 will accomplish this?
a. NumberFormat formatter = NumberFormat.getInstance(locale);
b. NumberFormat formatter = NumberFormat.getCurrency(locale);
c. NumberFormat formatter = NumberFormat.getCurrencyInstance(locale);
d. NumberFormat formatter = NumberFormat.getInstance(locale).getCurrency();
187: Which two statements are true about running code on the class path and the
module path?
a. A modular JAR placed on the -classpath results in a named application module
b. A Non-modular JAR placed on the path --module--path results in a named
application module
```

c. A modular JAR placed on the module --module--path results in a named application module.

d. A non-modular JAR placed on the -classpath results in an unnamed module

e. A modular JAR placed on the -classpath results in an automatic module.

```
188:
enum Season {
    WINTER('w'), SPRING('s'), SUMMER('h'), FALL('f');
    char ch;
    private Season(char ch) {
        this.ch = ch;
    }
}
and the code fragment:
public class Main {
    public static void main(String[] args) {
        Season[] sA = Season.values();
        //line n1
    }
}
```

Which three code fragments, at line n1, prints SPRING?

- a. System.out.println(Season.SPRING);
- b. System.out.println(Season.valueOf("SPRING"));

```
c. System.out.println(sA[0]);
d. system.out.println(Season.valueOf('s'));
e. System.out.printin(Season.valueOf("SPRING").ordinal();
f. System.out.println(season.values(1));
g. System.out.println(sA[1]);
189:
Given the content from the course.txt file:
123:Java:1
124:MySQL:2
125:Java Server Pages: 3
Given the code fragment:
Path filePath = Paths.get("course.txt");
try {
       // line 1
       Files. lines (filePath). filter(s -> s.contains("Java")). for Each (System. out::println);
} catch (IOException ex) {
       System.out.format(" file IO Exception is thrown.");
}
Which code <u>fragment</u> at line <u>1</u> prints the <u>lines</u> that contain <u>Java</u> from <u>the</u> course.txt
file?
       a. Files.lines(filePath).map(s ->
s.containes("Java")).forEach(System.out::println);
       b.Files.lines(filePath).filter(s -> s.contains("Java")).forEach(System.out::println);
       c.List<String> lines2 = Files.readAllLines(filePath).filter(s -> s.contains("Java"));
```

```
for(String line:lines2){
             System.out.println(line);
             }
      d. System.out.println(Files.readString(filePath).contains("Java"));
      e. List<String> lines1 = Files.readAllLines(filepath).contains("Java");
      for(String line:lines2){
             System.out.println(line);
      }
190:
class MyType<T>{
      private T value;
      public T getValue() {
             return value;
      }
      public void setValue(T value) {
             this.value = value;
      }
}
public class Main {
      public static void main(String[] args) {
              MyType<String> strType = new MyType<>();
              MyType<? extends Number> type= new MyType<>();
              strType.setValue("test");
              type.setValue(null);
              System.out.println(strType.getValue()+":"+ type.getValue());
```

```
}
}
What is the result:
a. The compilation fails.
b. test : 0
c. null : null
d. An Exception is thrown at runtime.
e. test : null
191:
       var c = new CopyOnWriteArrayList<>(List.of("1", "2", "3", "4"));
       Runnable r=()->{try{Thread.sleep(150);}catch(
       InterruptedException e)
       {
              System.out.println(e);
       }
       c.set(3,"four");System.out.println("c= "+c+" ");};
       Thread t = new Thread(r);
       t.start();
       for(var n:c)

int j = 25;
System. out. println(i > 2?i > 10?i*(j+10):i*j+5:i);
What is the result?
a. 25
b. 395
c. The compilation fails.
```

e. 80

196:

Why would you choose to use a peek operation instead of a forEach operation on a Stream?

- a. To process the current item and return void.
- b. To remove an item from the end of the stream.
- c. To process the current item and return a stream.
- d. To remove an item from the beginning of the stream.

197: Which two can be considered good practices for serializing Java objects?

- a. Ensure that the class definition used is the same as the class definition used by Java runtime at the time when the object was serialized.
- b. Always override the readobject/writeobject methods from the java.io.Serializable interface.
- c. Implement serialization for long-term data storage.
- d. Assign null value by default while serializing and deserializing a transient variable.
- e. Implement secure serialization by generating secure object hash or using encryption.

```
198:
```

```
List<String> fruits = List.of("banana", "orange", "apple", "lemon");

Stream<String> s1 = fruits.stream();

Stream<String> s2 = s1.peek(i -> System.out.print(i + " "));

System.out.println("-----");

Stream<String> s3 = s2.sorted();

Stream s4 = s3.peek(i -> System.out.print(i + " "));

System.out.println("-----");
```

## String <u>strFruits</u> = (String) <u>s4.collect(Collectors.joining(","))</u>;

What is the output?

}

Which method should be overridden?

```
a. banana orange apple lemon apple banana lemon orange
   b. banana orange apple lemon
      apple banana lemon orange
      banana orange apple lemon apple banana lemon orange
   d. -----
      banana orange apple lemon
      -----apple banana lemon orange
199: question is completely blur
200:
class MyPeraiatenceData {

   B) hat at store 4
   C) at once 0
   D) An IndexoutofBoundsException is thrown at runtime.
   E) hat at store 1
Pg 206)
Question)
public class Tester {
       public static void main(String[] args) {
              int x = 0;
              while (x < 10) {
                     System.out.print(x++);
              }
       }
```

```
}
Which "for" loop produces the same output?
Options)
A)
<u>int</u> b = 0;
for( ; b <10;) {
       System.out.print (++b);
}
B) for (int d = 0; d < 10;)
       System.out.print (d);
       ++d;
}
C) for (a; a < 10; a++){
       System.out.print (a);
}
D) for(<u>int</u> c=0 ;; c++){
       System.out.print(c);
       if(c==10){
       break;
}
Pg no. 207)
package com.ltim.another;
```

```
public interface Converter {
      public static final double POUNDS_PER_KILOGRAM = 2.20462; //Line 1
      public double tare();
      public double net();
      public default double gross() {// line 2
      return tare () + net ();
      }
      public default double tare(String units) {
      return toUnit (tare (), units);
      }
      public default double net (String units) {
      return toUnit (net(), units);
      }
       public default double gross (String units) {
              return toUnit (gross(), units);
      }
       private static double toUnit (double kilograms, String unit) { // line 3
              switch (unit) {
```

case "KILO": return kilograms;

```
default: throw new IllegalArgumentException();
}
}
}
Which is true?
A) It compiles without errors.
B) Line 3 is the first line to cause a compilation error.
C) Line 2 is the first line to cause a compilation error.
D) Line 1 is the first line to cause a compilation error.
Pg 208)
Questions)
import java.sql.Timestamp;
public class Tester {
       public static void main(String[] args) {
              Timestamp ts = new Timestamp(1);
       }
}
and run these commands
javac Test.java
jdeps -summary Test.class
What is the result on execution of these commands?
Options)
```

- A) Test.class -> java.base Test.ciass -> java.sql
- B) On execution, the jdeps command displays an error.
- C) Test.class -> java.sql -> java.base
- D) Test.class -> java.base Test.class -> java.sql java.sql > java.base

```
Pg 210)
package com.ltim.another;

public class A {
    int a = 0;
    int b= 0;
    int c = 0;
    public void foo (int i) {
        a += b * i;
        c -= b * i;
    }
    public void setB(int i) {
        b = i;
    }
}
```

Which makes class A thread safe?

## A) Make foo and setB synchronized.

- B) Class A is thread safe.
- C) Make setB synchronized.
- D) Make foo synchronized.
- E) Make A synchronized.

```

Question)
public class Employee (
private String locality;
```

```
private int salary:
// the setter and getter methods go here
8. List roster = createEmployeeLiat();
9. double average = roster
10. .stream();
11. /* insert code here */
System.out.println(average);
Which code fragment Inserted on line 11 prints the average salary of all employees
from the Bay Area?
A) .filter(e -> e.getLocality().equals("Bay Area"))
.average (Employee: : getSalary)
.getAsDouble();
B) .filter(e -> e.getLocality().equals("Bay Area"))
.filter(s -> s.getSalary() )
. average()
.getAsDouble();
C) .filter(e -> e.getLocality() .equals ("Bay Area"))
.mapToInt (Employee: :getSalary)
. average()
.getAsDouble();
D) .collect (Collectors.groupingBy (Employee :: getLocality,
Collectors.averagingDouble (Employee :: getSalary)));
```

```
Pg no 216)
Question)
Given
6. import java. util.function.*;
7. public class TripleThis {
8. public static void main (String[] args) [
9. Function tripler = x -> ( return (Integer) x * 3; );
10. TripleThis.printValue (tripler, 4);
11.}
12. public static void printValue (Function f, T num) (
13. System. out.println (f.apply (num)); oyee :: getSalary)));
14. }
15. }
Compiling TripleThis. java gives this compiler warning:
Note: TripleThis.java uses unchecked or unsafe operations.
Which two replacements remove this compiler warning and prints 12?
A) Replace line 9 with Function tripler = x -> { return x * 3; }
B) Replace line 12 with public static void printValue (Function f, Integer num)
C) Replace line 12 with public static void printValue (Function f, int num) {
D) Replace line 12 with public static void printValue (Function f, T num) {
E) Replace line 9 with Function tripler = x -> ( return x * 3; }
F) Replace line 9 with Function tripler = x -> { return (Integer) x * 3; }
```

## **PAGE 219**

```
public class DNASynth {
  int aCount;
  int tCount;
  int cCount;
  int gCount;
  DNASynth(int a, int tCount, int c, int g) {
    this.aCount = a;
    this.tCount = tCount;
    this.cCount = setCCount(c);
    setGCount(g);
  }
 int setCCount(int c) {
    return c;
  }

C. List<String> lines2 = Files.readAllLines(filePath).filter(s -> s.contains("Java"));

for (String line : lines2) {
a. System.out.println(line);
}

D. System.out.println(Files.readString(filePath).contains("Java"));
E. Files.lines (filePath).map (s ->

a. s.contains ("Java") ).forEach (System.out :: println);
```

#### Question 29:

Given TripleThis.java:

```
Compiling TripleThis. java gives this compiler warning:
Note: TripleThis.java uses unchecked er unsafe operations.
Which two replacements remove this compiler warning and prints 12?
```

- A. Replace line 9 with Function tripler=x -> {return x \* 3;}
- B. Replace line 12 with public static void printValue (Function f, Integer num){
- C. Replace line 12 with public static void printValue (Function f, int num) {
- D. Replace line 12 with public static void printValue (Function f, T num) {
- E. Replace line 9 with Function tripler =  $x \rightarrow \{ return x * 3; \}$
- F. Replace line 9 with Function tripler = x -> { return (Integer) x \* 3; }

#### **Question 48:**

```
Given:
```

List original = new ArrayList<>(Arrays.asList(1,2,3,4,5));

Which two code fragments remove the elements from the original list?

```
A. List sl = Collections.synchronizedList(original);
for (Integer w : sl)
sl.remove (w);
```

```
B. List cwa = new CopyOnWriteArrayList<>(original);
for (Integer w : cwa)
```

cwa. remove (w);//cannot convert from object to integer so have to write List<Integer>

```
C. List al = new ArrayList<>(original);
for (Integer w : al)
al.remove (w);
```

D. Queue clq = new ConcurrentLinkedQueue<>(original);
for(Integer w : clq)
clq. remove (w);

#### **Question 35:**

```
public class Foo {
public void foo(Collection arg) {
      System.out.println("Bonjour le monde!");
}
}
And
public class Bar extends Foo {
       public void foo(List arg) {
             System.out.println("Hello world!");
      }
      public static void main(String... args) {
              List<String> li = new ArrayList<>();
              Collection<String> co = li;
              Bar b = new Bar();
              b.foo(li);
              b.foo(co);
      }
}
What is the output?
   A. Bonjour le monde!
      Hello world!
   B. Hello world!
      Bonjour le monde!
   C. Hello world!
      Hello world!
   D. Bonjour le monde!
       Bonjour le monde!
Question 31:
public class Main {
      static String prefix = "Mondial:";
      private String name = "domainmodel";
      public static String getName() {
              return new Main().name;
      }
```

```
public static void main(String[] args) {
             Main m = new Main();
             System.out.println(/* Insert code here */);
      }
}
Which two code snippets inserted independently inside println method print
Mondial:domainmodel?
   A. Main.prefix + Main.getName ()
   B. prefix + name
   C. prefix + Main.name
   D. Main.prefix + Main.name
   E. new Main().prefix + new Main().name
   F. prefix + getName
   Question 24:
   Given:
   Path pl = Paths.get("/scratch/exam/topsecret/answers");
   Path p2 = Paths.get ("/scratch/exam/answers/temp.txt"):
   Path p3 = Paths.get ("/scratch/answers/topsecret");
   Which two statements print ..\..\answers\topsecret?
      A. System. out.print (p2.relativize(p1));
      B. System.out.print (p1.relativize(p2));
      C. System.out.print (p3.relativize(p2));
      D. System.out.print(p2.relativize(p3));
      E. System.out.print(p1.relativize(p3));
      F. System.out.print (p3.relativize(p1));
```

#### Question 33:

```
public class Price {
       private final double value;
       public Price(String value) {
              this(Double.parseDouble(value));
       }
       public Price(double value) {
              this.value = value;
       }
       public Price() {
       public double getValue() {
              return value;
       }
       public static void main(String[] args) {
              Price p1 = new Price("1.99");
              Price p2 = new Price(2.99);
              Price p3 = new Price();
              System.out.println(p1.getValue() + "," + p2.getValue() + "," +
p3.getValue());
       }
}
What is the result?
   A. The compilation fails.
   B. 1.99,2.99,0
   C. 1.99,2.99,0.0
```

# Question 34:

D. 1.99,2.99

```
int x = 0;
              while (x < 10) {
                      System.out.print(x++);
               System.out.println();
Which "for" loop produces the same output?
   A. for(<u>a</u>; <u>a</u> < 10; <u>a</u>++)
       System.out.print (a);
   B. int b = 0;
       for(; b < 10;){
              System.out.print (++b);
   C. for(int d = 0; d < 10;) {
              System.out.print(d);
                      ++d;
   D. for(int c = 0; c + +){
              System.out.print(c);
               if(c == 10){
               break;
       }
       }
Question 32:
1.public class Test {
       private static class Greet {
3.
               private void print() {
4.
                      System.out.println("Hello World");
5.
              }
6.
       }
7.
       public static void main(String[] args) {
               Test.Greet i = new Greet();
8.
9.
               i.print();
10.
       }
11.}
```

#### What is the result?

- A. Hello World
- B. The compilation fails at line 2.
- C. The compilation fails at line 9.
- D. The compilation fails at line 8.

#### Question 39:

Given the code fragment:

```
Integer i = 11;
```

Which two statements compile?

- A. Double a = i;
- B. Double c = (Double)i;
- C. Double b = Double.valueOf (i);
- D. double d = i;
- E. double e = Double.parseDouble (i);

# Question 38:

Which three initialization statements are correct?

- A. short ah = (short)'A';
- B. int x=12 34;
- C. byte b= 10;
   char c= b;
- D. String contact# = "(+2) (999) (232)";
- E. int[][][] e={{1,1,1}, {2,2,2}};
- F. float x=1f;

```
G. boolean false = (4 != 4);
```

```
Question 40:
```

```
public class Tester {
    public static void main(String[] args) {
        float x = 2, y = 4, z = 4;
        float a = y / x, b = y / z;
        if (a > b) {
            System.out.println(a + b);
        }
    }
}
What is the result?
```

- A. An exception is thrown at runtime.
- B. 1.0
- C. 2.0
- D. 3.0
- E. The program prints nothing.

# Question 37:

```
Given:

public class Foo {
    public void foo(<u>Collection</u> arg) {
        System.out.println("Bonjour le monde!");
    }
}
and
public class Bar extends Foo {
    public void foo(<u>Collection</u> arg) {
        System.out.println("Hello world!");
    }
```

```
public void foo(List arg) {
              System.out.println("Olá Mundo!");
       }
}
and
Foo \underline{f1} = new Foo ();
Foo \underline{f2} = new Bar ();
Bar b1 = new Bar ();
Collection<String> c=new ArrayList<>();
Which three are true?
   A. f2.foo (c) prints ola Mundo!
   B. f1.foo (c) prints Bonjour le monde!
   C. f1.foo (c) prints ola Mundo!
   D. b1.foo (c) prints Bonjour le monde!
   E. f1.foo(c) prints Hello world!
   F. f2.foo(c) prints Hello world!
   G. f2.foo(c) prints Bonjour le monde!
   H. b1.foo (c) prints ola Mundo!
   I. b1.foo (c) prints Hello world!
Question 36:
Given:
public class X {
       private Collection collection;
       public void set(Collection collection) {
              this.collection = collection;
       }
}
and
public class Y extends X {
       public void set(Map<String, String> map) {
```

super.set(map);

```
// line 1
       }
}
Which two lines can replace line 1 so that the Y class compiles?
   A. super.set (List map)
   B. super.set (map.values());
   C. set (map.values());
   D. map.forEach((k, v) \rightarrow set(v)));
   E. set (map)
Question 44:
Given:
public class Tester {
       public static void main(String args[]) {
              String s = "10";
              try {
                     int x = 0;
                     x = Integer.parseInt(s, 2); // line 1
                     System.out.println("% is " + x);
              } catch (NumberFormatException e) {
                     System.out.println("Error parsing value of " + x); // line 2
              }
       }
}
What is the result?
   A. Error parsing value 0
   B. The compilation fails due to an error in line 2.
   C. X is 10.
   D. X is 2.
```

E. The compilation falls due to an error in line 1.

#### Question 45:

```
Given:

class Scope {
    static int myint = 666;

    public static void main(String[] args) {
        int myint = myint compilation error
        System.out.println(myint);
    }
}
```

Which is true?

- A. It prints 666.
- B. The code compiles and runs successfully but with a wrong answer (i.e., a bug).
- C. The code does not compile successfully.
- D. Code compiles but throws a runtime exception when run.

#### Question: 5

#### Given the content from the courses.txt file:

```
123:Java:1
124:MySQL:2
125:Java Server Pages:3
```

# Given the code fragment:

```
Path filePath = Paths.get("course.txt");
try {
```

```
/* line 1 */
} catch (IOException ex) {
System.out.format("File 10 Exception is thrown.", ex);
}
Which code fragment at line 1 prints the lines that contain Java from the course.
A. List<String> lines2 = Files.readAllLines(filePath).filter(s ->
  s.contains("Java"));
  for(String line : lines2) {
  System.out.println(line);
  }
B. List<String> lines1 =
   Files.readAllLines (filePath).contains ("Java");
  for (String line : lines2) {
  System.out.println(line);
  }
C. System.out.println(Files.readString(filePath).contains("Java"));
D. Files.lines (filePath).filter(s ->
s.contains("Java")).forEach (System.out::println);
E. Files.lines(filePath).map(s ->
 s.contains("Java")).forEach(System.out::println);
```

#### Question: 26

### Given the code fragment:

```
module citizen {
      exports com.name to greeting;
}
and
module greeting {
}
```

#### Which statement is true?

A. public members in the com.name package are accessible to all modules.

- B. All members in the com. name package are accessible only to the greeting module.
- C. Inserting "requires citizen;" at greeting's module-info.java, enables com.name members accessible to the greeting module.
- D. All members of com.name are accessible only to the citizen and greeting modules.

E. public members in the com. name package are accessible only to the greeting module.

Question: 31

Assuming the Book class contains the get Price() method and given the code fragment.

```
List books = List.of(new Book ("Goodbye to Childhood", 19),
                       new Book ("Farewell to the Land", 35),
                       new Book ("City Life", 17));
```

### Which two statements, independently, print the books with price less than 20?

```
A. Stream bookStream = books.stream();
 bookStream.map((Book a) -> a.getPrice() <20)
         .forEach (System.out::println);
B. books.stream().filter(a -> a.getPrice() <20)
.forEach (System.out::println);
C. Stream bookStream books.stream();
 bookStream.filter(a-> ((Book)a).getPrice() <20)
 .forEach (System.out::printin);
D. Stream bookStream books.stream();
 bookStream.filter(a -> a.get.Price() < 20)
          .peek(System.out::printin);
E. Stream bookStream = books.stream();
 bookStream.peek(a -> a.getPrice() <20)
     .forEach (System.out::println);
Question: 25
```

A. By default, modules can access each other as long as they run in the same folder.

Which two statements are correct about modules in Java?

- B. **java.base** exports all of the Java platforms core packages.
- C. module-info. java cannot be empty.
- D. module must be declared in module-info.java file.
- E. module-info.java can be placed in any folder inside module-path.

# Question: 16

# Given the code fragment:

```
/* line n1 */
 A() {
  super ("The Mandatory Criteria Yet to Meet");
 }
}
15. public class TestCE {
16. public static void main(String[] args) throws A {
17.
       int a 10, b = 13;
18.
       try {
19.
         if (ab) {
20.
            throw new A();
          }
21.
22.
        }
23.
        catch (Exception e) { System.out.println(e); }
24.
        System.out.println("Continue...");
25. }
26. }
```

You must define the A exception class. The program execution must be terminated is true and an A exception is thrown at line 20.

# Which code fragment at line n1 defines A as per the requirement?

```
A. class A extends ArithmeticException {B. class A extends Exception {C. class A extends Throwable {D. class A extends RuntimeException {
```

Question: 42

# Given the code fragment from Box.java:

```
public class Box implements Serializable (
    private int boxId:
    private String size:
    private List items;
}
```

# Given the code fragment from Item.java:

```
public class Item {
    private int id;
    private String name;
}
```

#### Given the information:

The classes Box and Item are encapsulated with getters and setters methods.

The classes Box and Item contains required constructors source code.

### and the code fragment:

```
public static void main (String[] args) throws IOException [
    List items1 = new ArrayList<>();
    itemsl.add(new Item(1, "Pen"));
    itemsl.add(new Item(2, "Ruler"));
    Box bl = new Box (123, "a", items1);
    try ( FileOutputStream fout = new FileOutputStream("boxser.txt")) {
        ObjectOutputStream out = new ObjectOutputStream(fout);) (
            out.writeObject(b1);
            out. flush ();
            out.close ();
        } catch (Exception e) {
                System.out.println ("Unable to Serialize");
        }
}
```

#### Which action serializes the b1 object?

- A. Override readObject () and writeObject () methods in the Book class.
- B. Handle NotSerializableException in the try clause or throw in the main () method definition.
- C. Add SerialVersionUID to the Box and Item class.
- D. Implement the Serializable interface in the Item class.
- E. Remove out.flush () method invocation.

# Question: 44

```
Given:
package test.tl;
public class A {
     public int x = 42;
     protected A() {}
                         // line 1
}
and
package test.t2;
import test.t1.*;
public class B extends A {
      int x = 17;
                          // line 2
      public B() { super(); } // line 3
}
and
package test;
import test.t1.*:
import test.t2.*;
public class Tester {
   public static void main(String[] args) {
       A obj = new B():
                                      //line 4
        System.out.println(obj.x); // line 5
   }
}
```

#### What is the result?

- A. The compilation fails due to an error in line 1.
- B. 42
- C. The compilation fails due to an error in line 3.
- D. The compilation fails due to an error in line 5.
- E. The compilation falls due to an error in line 2.
- F. The compilation falls due to an error in line 4.

Question: 30

## Examine this excerpt from the declaration of the java.se module:

```
module java.se {
    ...
    requires transitive java.xml;
    ...
}
```

#### What does the transitive modifier mean?

- A. Any module that attempts to require the **java.se** module actually requires the **java.xml** module instead.
- B. Only a module that requires the **java.se** module is permitted to require the **java.xml** module.
- C. Any module that requires the **java.xml** module does not need to require the **java.se** module.
- D. Any module that requires the **java.se** module does not need to require the **java.xml** module.

#### Question: 9

#### Given the data of the EMP table:

```
ID NAME DEPT101 SMITH HR102 JONES ENG103 WEAVER HR
```

Assuming that jdbcURL, username, and password are declared and initialised.

```
try (Connection conn = DriverManager.getConnection (jdbcURL, username,
password)

PreparedStatement query = conn.prepareStatement ("SELECT ID, NAME FROM
EMP ?");

PreparedStatement update = conn.prepareStatement ("INSERT INTO RECRUITING
VALUES (?,?)"))

{
    query.setString(1, "HR");
    ResultSet rs = query.executeQuery();
    while (rs.next()) {
        update.setObject(1, rs.getObject (1, Integer.class), JDBCType.INTEGER);
        update.setObject (2, rs.getObject (2, String.class), JDBCType.VARCHAR);
        update.execute();
    }
}
```

### Which two happen upon execution?

- A. Memory leaks because **Connection**, **PreparedStatements**, and **Resultset** are not closed.
- B. Three SQL statements are executed.
- C. A **SQLException** is thrown because the **ResultSet** is not closed.
- D. Three **PreparedStatement** objects are created.
- E. Two SQL statements are executed.
- F. Two **PreparedStatement** objects are created.

Question: 50 : ALREADY DONE

Question: 20

#### Given:

}

```
public enum Season {
     WINTER ('W'), SPRING('s'), SUMMER('h'), FALL('f');
     char c;
     private Season (char c) {
          this.c = c;
     }
}
and the code fragment:
public static void main(String[] args) {
          Season[] sA = Season.values();
          // Line n1
```

# Which three code fragments, at line n1, prints SPRING?

```
A. System.out.println(sA[0]);

B. System.out.println(sA[1]);

C. System.out.println(Season.valueOf("SERING"));

D. System.out.println(Season.valueOf('s'));

E. System.out.println(Season.valueOf("SPRING").ordinal());

F. System.out.println(season.SPRING);

G. System.out.println(Season.values(1));
```

# Question: 47

# Given:

```
public class Tester {
    public static void main(String[] args) {
        int x = 0, y = 6;
        for(; x<y; x++, y--) { // line 1
            if (x%2 == 0) {
                 continue;
            }
                 System.out.println(x+"-"+y);
            }
        }
}</pre>
```

#### What is the result?

}

```
A. 1-5
B. 0-6
  2-4
C. The compilation fails due to an error in line 1.
D. 1-5
2-4
E. 2-4
F. 0-6
G. 0-6
   1-5
   2-4
Question: 15
Given the declaration:
@Target ({TYPE, METHOD})
@interface Resource {}
/* Loc1 */ class Manager extends /* Loc2 */ Person {
 /* Loc3 */ Manager() {...}
 /* Loc4 */ String getDepartmentName() {...}
 /* Loc5 */ String departmentName;
```

```
In which two locations is it legal to apply the @Resource annotation?
A.Loc2
B.Loc5
C.Loc3
D.Loc1
E.Loc4
Question: 12
Given:
public class Main {
     public static void main(String[] args) {
        Thread tl = new Thread(new MyThread()):
        Thread t2 = new Thread(new MyThread());
        Thread t3 = new Thread (new MyThread());
        t1.start():
        t2.run()
        t3.start();
        t1.start();
     }
```

}

```
class MyThread implements Runnable {
    public void run() {
        System.out.println("Running."):
     }
}
```

#### Which one is correct?

- A. Three threads are created.
- B. Four threads are created.
- C. The compilation falls.
- D. An **IllegalThreadStateException** is thrown at runtime.

Question: 13

#### Given:

```
public class A {
    int a = 0;
    int b = 0;
    int c = 0;
    public void foo(int i) {
        a += b*i;
        c -= b*i;
    }
    public void setB(int i) {
        b = i;
}
```

```
}
```

# Which makes class A thread safe?

- A. Make **foo** synchronized.
- B. Class A is thread safe.
- C. Make **setB** synchronized.
- D. Make **A** synchronized.
- E. Make foo and setB synchronized.

```
Question 1:
package test.t1;
public class A {
    public int x = 42;
    protected A () {} //line 1
}
and
package test.t2;
import test.t1.*;
public class B extends A{
                       //line 2
    int x = 17;
                           //line 3
    public B () { super(); }
}
and
package tester;
import test.t1.*;
import test.t2.*;
public class Tester {
```

```
public static void main(String[] args) {
                                       //line 4
         A obj = new B();
                                       //line 5
         System.out.println(obj.x);
    }
}
What is the result?
   1. The compilation fails due to an error in line 3.
   2. The compilation fails due to an error in line 5.
   3. The compilation fails due to an error in line 3.
   4. 17
   5. 42
   6. The compilation fails due to an error in line 4.
Answer: 5. 42
Question 2:
public class Person {
    private String name = "Green";
    public void setName(String name) {
         String title = "Mr. ";
         this.name = title + name;
    }
    public String toString() {
         return name;
```

```
}

and

public class Test {
    public static void main(String[] args) {
        Person p = new Person();
        p.setName("Blue");
        System.out.println(p);
    }
}
```

What is the result?

- 1. Mr. Green
- 2. Green
- 3. Mr. Blue
- 4. An exception is thrown at runtime.

Answer: 3. Mr.Blue

#### 3. Given the content from the courses.txt file:

```
123: Java:1
124:MySQL:2
125: Java Server Pages: 3
Given the code fragment:
Path filePath = Paths.get("course.txt");
try {
/* line 1 */
} catch (IOException ex) {
System.out.format ("File 10 Exception is thrown.", ex);
}
Which code fragment at line 1 prints the lines that contain Java from the course.txt
file?
a) Files.lines (filePath).map(s ->
s.contains("Java")).forEach (System.out::println);
b) List<String> lines2 = Files.readAllLines (filePath).filter(s ->
s.contains("Java"));
for (String line: lines2) (
System.out.println(line);
}
c) List<String> lines1 =
Files.readAllLines (filePath). contains ("Java");
for (String line: lines2) {
System.out.println(line); }
d) Files.lines (filePath).filter(s ->
s.contains("Java")).forEach (System.out::println);
e) System.out.println (Files.readString (filePath) .contains ("Java"));
```

# 4. Given:

```
public class Person {
    private String name = "Green";
    public void setName (String name) {
    String title = "Mr. ";
   this.name = title + name;
}
   public String toString() {
      return name;
   }
}
And
public class Test {
      public static void main(String args[]) {
      Person p = new Person();
       p.setName("Blue");
      System.out.println(p);
     }
}
```

#### What is the result?

- a) Mr. Green
- b) Green
- c) Mr. Blue
- d) An exception is thrown at runtime.

# 5. Given the code fragment:

```
int x = 0;
while (x < 10) {
System.out.print(x++);
}</pre>
```

# Which "for" loop produces the same output?

7. A company has an existing Java app that includes two Java 8 jar files, sales-8.10.jar and clients- 10.2.jar.

The jar file, sales-8.10.jar, references packages in clients-10.2.jar, but clients-10.2.jar does not reference packages in sales-8.10.jar.

They have decided to modularize clients-10.2.jar.

Which module-info.java file would work for the new library version clients-10.3.jar?

# Options:

```
a. module com.company.clients {
        exports com.company.clients;
    }
b. module com.company.clients {
        requires com.company.clients;
}
c. module com.company.clients {
        uses com.company.clients;
}
d. module com.company.clients {
        exports com.company.clients.Client;
}
```

Ans: a.

Explanation: This option exports the com.company.clients package, making it available for other modules, such as sales-8.10.jar, to use. The other options either incorrectly specify dependencies or do not export the required packages.

```
8. Given:
public class A {
    int a = 0;
    int b = 0;
    int c = 0;
    public void foo (int i) {
        a += b * i;
        c -= b * i;
    }
    public void setB (int i) {
        b = i;
    }
}
```

Which makes class A thread safe?

## a. Make foo and setB synchronized.

- b. Class A is thread safe.
- c. Make A synchronized.
- d. Make foo synchronized.
- e. Make sets synchronized.

#### Ans: a.

Explanation: This ensures that both methods foo and setB are synchronized, preventing concurrent access to the shared state and thus making the class thread-safe.

- 9. Given:
- 5. IntStream str = IntStream.of(2, 3, 4);
- 6. IntFunction<Integer> func =  $x \rightarrow y \rightarrow x * y$ ;
- 7. str.map(func.apply(10)).forEach(System.out::println);

Which action will enable the code to compile?

- a. Replace line 6 with Function<UnaryOperator> func = x -> y -> x \* y;
- b. Replace line 6 with IntFunction<UnaryOperator> func=  $x \rightarrow y \rightarrow x * y$ ;

# c. Replace line 6 with IntFunction<IntUnaryOperator> func = x -> y -> x \* y

d. Replace line 6 with BiFunction<Integer> func = x -> y -> x \* y;

### Ans: c

Explanation: This option correctly uses IntFunction to produce an IntUnaryOperator, which matches the lambda expression's type.

```
(PAGE NO. 10)
Q.45
45. Given:
public class Main {
public static void main (String[] args) (
List<Player> players = List.of (new Player ("Scott", 115),
                                   new Player ("John", 70),
                                    new Player ("Jelly", 105));
double average = // line 1
System.out.println ("The average is: " + average);
}
}
class Player {
public String name;
public int score;
public Player (String name, int score) {
this.name = name;
this.score = score;
}
}
```

You want to calculate the average of the Player's score.

Which statement inserted on line 1 will accomplish this?

- a) players.stream() .mapToInt (a -> a.score) .average().orElse (0.0);
- b) players.stream() .mapToDouble (a -> a.score) .average ();
- c) players.stream() .map(a -> a.score).average ();
- d) players.stream().average ().orElse (0.0);

```
(PAGE NO.11)
Q.8 Given:
class MyType<T> {
private T value;
public T getValue () {
return value;
}
public void setValue (T value) {
this. value = value;
}
}
and
public class Test {
public static void main (String ... args) {
MyType<String> strType = new MyType<>();
MyType <? extends Number> type = new MyType<>();
strType.setValue ("test");
type. setValue (null);
System.out.println (strType.getValue() + ":" + type.getValue)
}
What is the result?
   a) test: null
   b) test: 0
   c) An Exception is thrown at runtime.
   d) The compilation fails.
```

e) null: null

public enum Status (

```
(PAGE NO.12)
Q49 – Given:
1. interface Pastry {
2. void getIngredients ();
3. }
4. abstract class Cookie implements Pastry {}
5
6. class ChocolateCookie implements Cookie {
7. public void getIngredients () {}
8.}
9. class CoconutChocolateCookie extends ChocolateCookie {
10. void getIngredients (int x) {}
11. }
Which is true?
   a) The compilation fails due to an error in line 4.
   b) The compilation fails due to an error in line 10.
   c) The compilation fails due to an error in line 9.
   d) The compilation fails due to an error in line 6.
   e) The compilation succeeds.
   f) The compilation fails due to an error in line 7.
   g) The compilation fails due to an error in line 2.
(PAGE NO.13)
Q50 - Given:
```

```
BRONZE (5), SILVER (10), GOLD (15);
private int rate;
private Status (int rate) {
this.rate = rate;
}
public int getRate() { return rate; }
public Status addStatus (int rate) {
return new Status (20);
}
}
and
public class Test {
public static void main (String [] args) {
Status silver = Status. SILVER;
System. out.println(silver+silver.getRate ());
Status platinum = Status. addStatus (20);
System.out.println(platinum+platinum.getRate());
}
What is the result?
   a) SILVER10 platinum20
   b) SILVER10 PLATINUM20
   c) The compilation fails.
   d) An exception is thrown at runtime.
```

e) SILVER10 20

```
QUESTION: -
Given the code fragment:
Integer i = 11;
Which two statements compile? (Choose two.)
A. Double b = Double.valueOf(i);
B. double e = Double.parseDouble(i);
C. Double a = i;
D. double d = i;
E. Double c = (Double) i;
QUESTION: -
Given the code fragment:
8. public class Test {
9.
       private final int x = 1;
      static final int y;
10.
11.
       public Test () {
12.
          System.out.print(x);
13.
         System.out.print (y);
14.
       }
       public static void main (String args []) {
15.
16.
       new Test ();
```

17. }
18. }
What is the result?
A. The compilation fails at line 16.
B. 10
C. The compilation fails at line 9.
D. The compilation fails at line 13.

E. 1

### Given the code fragment:

```
Integer i = 11;
Which two statements complie?
a) Double b = Double.valueOf(i);
b) double e = Double.parseDouble(i);
c) Double a = i;
d) double d = i;
e) Double c = (Double) i;
```

#### 18)

Your organization provides a cloud server to your customer to run their Java code. You are reviewing the changes for the next release and you see this change in one of the config files:

```
JAVA_OPTS="$JAVA_OPTS-Xms8g-Xmx8g -noverify"
JAVA_OPTS="$JAVA_OPTS -Xms8g"
```

Which is correct?

- 1. You reject the change because -Xms8g -Xmx8g uses too much system memory.
- 2. You accept the change because -noverify is a standard option that has been supported since Java 1.0.
- 3. You reject the change because -noverify is a critical security risk.
- 4. You accept the change because -noverify is necessary for your code to run with the latest version of Java.

#### 19)

```
interface MyInterface1 {
  public int method() throws Exception;
  private void pMethod() { /* an implementation of pMethod */ }
```

```
}
interface MyInterface2 {
  public static void sMethod() { /* an implementation of sMethod */ }
  public boolean equals();
}
interface MyInterface3 {
  public void method();
  public void method(String str);
}
interface MyInterface4 {
  public void dMethod() { /* an implementation of dMethod */ }
  public void method();
}
interface MyInterface5 {
  public static void sMethod();
  public void method(String str);
}
Which two interfaces can be used in lambda expressions?
- MyInterface1
- MyInterface2
- MyInterface3
- MyInterface4
- MyInterface5
```

```
Q 20
public class Tester {
public static void main (String[] args) {
float x=2, y=4, z=4;
float a = y / x, b = y / z;
if (a > b) {
System. out. println (a + b);
}
}
}
What is the result?
The program prints nothing.
An exception is thrown at runtime.
<mark>3.0</mark>
2.0
1.0
Q 21
package pratice;
public interface Converter {
  public static final double POUNDS_PER_KILOGRAM = 2.20462;
  public double tare();
  public double net();
```

```
public default double gross() {
  return tare() + net();
}
public default double tare(String units) {
  return toUnit(tare(), units);
}
public default double net(String units) {
  return toUnit(net(), units);
}
public default double gross(String units) {
  return toUnit(gross(), units);
}
private static double toUnit(double kilograms, String unit) {
  switch (unit) {
    case "KILO":
      return kilograms;
    case "POUND":
      return kilograms * POUNDS_PER_KILOGRAM;
    default:
      throw new IllegalArgumentException();
  }
```

```
}
}
Which is true?
Line 3 is the first line to cause a compilation error.
Line 2 is the first line to cause a compilation error.
Line 1 is the first line to cause a compilation error.
It compiles without errors.
Q22
Given:
Path p1 = Paths.get("/scratch/exam/topsecret/answers");
Path p2 = Paths.get("/scratch/exam/answers/temp.txt");
Path p3 = Paths.get("/scratch/answers/topsecret");
Which two statements print ..\..\answers\topsecret? (Choose two.)

    A. System.out.print(p3.relativize(p1));

   B. System.out.print(p2.relativize(p3));
   C. System.out.print(p1.relativize(p3));
      D. System.out.print(p3.relativize(p2));
   • E. System.out.print(p1.relativize(p2));

    F. System.out.print(p2.relativize(p1));
```

```
23) Given the code fragment:
public class Main {
public static void main(String[] args) {
List<String> fruits = List.of ("banana", "orange", "apple", "lemon"); Stream<String> s1
=fruits.stream();
Stream<String> s2 =a1.peek (i-> System.out.print (i+" "));
System.out.println("----");
Stream<String> s3 = s2.sorted();
Stream s4 = s3.peek (i-> System.out.print (i+" ")); System.out.println("----");
String strFruits = s4.collect(Collectors.joining (","));
}
}
What is the output?
a) -----
b) banana orange apple lemon
  apple banana lemon orange
  banana orange apple lemon apple banana lemon orange
```

```
d) -----
  banana orange apple lemon
  ---- apple banana lemon orange
e) banana orange apple lemon apple banana lemon orange
24)
Given:
<ListInteger> numbers = List.of (2, 3, 0, 8, 1, 9, 5, 7, 6, 4);
int sum = numbers.stream(). reduce (0, (n, m) -> n + m); // line 1
You want to make the reduction operation parallelized.
Which two modifications will accomplish this?
a) Replace line 1 with int sum = numbers. parallel () .stream().reduce(0, (n, m) -> n
+m);
b) Replace line 1 with int sum = numbers.parallelStream().reduce (0, (n, m) -> n+m);
c) Replace line 1 with int sum = numbers.stream().iterate (0, a -> a+1). reduce (0, (n,
m) -> n + m);
```

```
d) Replace line 1 with int sum = numbers.stream().parallel ().reduce (0, (n, m) -> n +
m);
e) Replace line 1 with int sum = numbers.stream().flatMap (a -> a) . reduce (0, (n, m) -
> n + m);
25)
Given the code fragment:
8. public class Test {
9. private final int x = 1;
10. static final int y;
11. public Test () {
12. System.out.print (x);
13. System.out.print (y);
14. }
15. public static void main(String args[]) {
16. new Test ();
17. }
18.}
What is the result?
a) The compilation fails at line 16.
b) 10
```

- c) The compilation fails at line 9.
- d) The compilation fails at line 13.
- e) 1

## Page-26:-

```
public class Color {
  String hue;
  int value;
  public Color(String hue, int value) {
    this.hue = hue;
    this.value = value;
  }
  public String toString() {
    return this.hue + ":" + this.value;
  }
  public static void main(String[] args) {
    List<Color> clrs = List.of(
      new Color("Red", 100),
      new Color("Yellow", 50),
      new Color("Red", 75),
      new Color("Yellow", 75)
    );
    Comparator<Color> hueSrtr = (h1, h2) -> h1.hue.compareTo(h2.hue);
    Comparator<Color> valueSrtr = (h1, h2) -> {
      if (h1.value >= h2.value) {
```

```
return 1;
} else {
    return -1;
}
};

clrs.sort(hueSrtr.thenComparing(valueSrtr));
System.out.println(clrs);
}
```

### What is the result?

- A. [Red:75, Red:100, Yellow:50, Yellow:75]
- B. [Yellow:75, Yellow:50, Red:100, Red:75]
- C. [Yellow:50, Yellow:75, Red:75, Red:100]
- D. An Exception is thrown at runtime.
- E. [Red:100, Red:75, Yellow:75, Yellow:50]

### Page-27:-

```
Given:
public class Foo {
  public void foo(Collection arg) {
    System.out.println("Bonjour le monde!");
  }
}
and
public class Bar extends Foo {
  public void foo(List arg) {
    System.out.println("Hello world!");
  }
  public static void main(String... args) {
    List<String> li = new ArrayList<>();
    Collection<String> co = li;
    Bar b = new Bar();
    b.foo(li);
    b.foo(co);
  }
}
```

#### What is the output?

- A. Bonjour le monde! Hello world!
- B. Hello world!Bonjour le monde!
- C. Bonjour le monde! Bonjour le monde!
- D. Hello world! Hello world!

### Page-28:-

### Given:

```
Path p1 = Paths.get("/scratch/exam/topsecret/answers");
Path p2 = Paths.get("/scratch/exam/answers/temp.txt");
Path p3 = Paths.get("/scratch/answers/topsecret");
```

Which two statements print ..\..\answers\topsecret?

- A. System.out.print(p1.relativize(p3));
- B. System.out.print(p3.relativize(p1));
- C. System.out.print(p2.relativize(p3));
- D. System.out.print(p1.relativize(p2));
- E. System.out.print(p2.relativize(p1));
- F. System.out.print(p3.relativize(p2));

### Question 29).- (Doubt in this question)

```
module citizen {
          exports com.name to greeting;
}
AND
module greeting {
}
```

Which statement is true?

- a.) public members in the <u>com.name</u> package are accessible only to the greeting module.
- b.) All members of <u>com.name</u> are accessible only to the citizen and greeting modules.
- c.) All members in the <u>com.name</u> package are accessible only to the greeting module.
- d.) Inserting "requires citizen;" at greeting's <u>module-info.java</u>, enables <u>com.name</u> members accessible to the greeting module.
- e.) public members in the <u>com.name</u> package are accessible to all modules.

#### Question 30).-

```
Given the code fragment:
StringBuilder txt1 = new StringBuilder("PPQRRRSTT");
int i=0;
a:
while (i < txt1.length()) {
    char x = txt1.charAt(i);
    int j = 0;</pre>
```

```
i++;
b:
while (j < txt1.length()) {
char y = txt1.charAt(j);
if ( i!= j \&\& y == x) {
       txt1.deleteCharAt(j);
       // line 1
       }
       j++;
       }
}
System.out.println(txt1);
Which two statements inserted independently at line 1 enable this code to print
PRRT?
continue a;
i--;
j--;
continue b;
break b;
break a;
Question 31).-
List <Integer> numbers = List.of (2, 3, 0, 8, 1, 9, 5, 7, 6, 4);
int sum = numbers.stream().reduce(0, (n, m) -> n + m); // line 1
```

You want to make the reduction operation parallelized.

Which two modifications will accomplish this?

Replace line 1 with int sum = numbers.parallel().stream().reduce(0,  $(n, m) \rightarrow n + m$ );

Replace line 1 with int sum = numbers.parallelStream().reduce(0, (n, m)-> n+m);

Replace line 1 with int sum = numbers.stream().iterate(0, a -> a+1).reduce(0, (n, m) - > n+m);

Replace line 1 with int sum = numbers.stream().parallel ().reduce(0, (n, m) -> n+ m);

Replace line 1 with int sum = numbers.stream().flatMap(a -> a).reduce(0, (n, m) -> n +m);

```
<terminated> App [Java App
Hello Joe
public class App {
                                                                           class Greeting {
   private void greet(String name) {
       System.out.println("Hello " + name);
}
// line 1
public static void main(String[] args){
new App ().new Greeting().greet ("Joe");
}
Which code fragment added to line 1 enables the code to compile and print Hello Joe
1. class Greeting {
private void greet (String name) {
System.out.println("Hello " + name);
}
}
2. class Greeting {
public static void greet (String s) { System.out.println("Hello "+ s);
}
3. static class Greeting

}
```

37))

What is the result?

hat at store 1

at once 1

An IndexOutOfBoundsException is thrown at runtime.

at once 0

hat at store 4

```
Q40) Given the code fragment
public static void main(String[] args) {
  var lst = List.of(1, 2.0f, "4.0");
  for (var c : lst) {
    System.out.print("> " + c);
  }
  System.out.println();
  lst.add(2, 3);
                      // line n1
  for (int c = 0; c < lst.size(); c++) {
    display(lst.get(c)));
  }
}
public static void display(var c) { // line n2
  System.out.print("> " + c);
}
What is the result?
Options:
A)
> 1> 2.0> 4.0
> 1> 2.0> 4.0
B) (Ans)
A compile time error occurs at line n2.
```

```
> 1> 2.0> 3> 4.0
```

```
D)
An exception is thrown at line n1.
______
Q39) Given the code fragment
Locale locale = Locale.US;
// line 1
double currency = 1_00.00;
System.out.println(formatter.format(currency));
You need to display the value of currency as $100.00.
Which code inserted in line 1 will accomplish this?
Options:
A)
NumberFormat formatter = NumberFormat.getInstance(locale);
B) (Answer)
NumberFormat formatter = NumberFormat.getCurrencyInstance(locale);
C)
NumberFormat formatter = NumberFormat.getCurrency(locale);
D)
NumberFormat formatter = NumberFormat.getInstance(locale).getCurrency();
______
Q38) Given:
public class Main {
```

```
public static void main(String[] args) {
    Thread t1 = new Thread(new MyThread());
    Thread t2 = new Thread(new MyThread());
    Thread t3 = new Thread(new MyThread());
    t1.start();
    t2.run();
    t3.start();
    t1.start();
  }
}
class MyThread implements Runnable {
  public void run() {
    System.out.println("Running.");
  }
}
Which one is correct?
Options
A)
Four threads are created.
B)
The compilation fails.
C)(Answer)
An IllegalThreadStateException is thrown at runtime.
```

Three threads are created.

```
Page 41
public class Tester {
  public static void main(String[] args) {
    StringBuilder sb = new StringBuilder(5);
    sb.append("HOWDY");
    sb.insert(0, ' ');
    sb.replace(3, 5, "LL");
    sb.insert(6, "COW");
    sb.delete(2, 7);
    System.out.println(sb.length());
  }
}
what would be the output?
An exception is thrown at run time
3
5
4(Answer)
Page 42
class ConSuper {
  protected ConSuper() {
    this(2); // Call the parameterized constructor
    System.out.print("3");
  }
```

```
protected ConSuper(int a) {
    System.out.print(a);
  }
}
public class ConSub extends ConSuper {
  public ConSub() {
    this(4); // Call the parameterized constructor of ConSub
    System.out.print("1");
  }
  public ConSub(int a) {
    super(); // Call the no-argument constructor of ConSuper
    System.out.print(a);
  }
  public static void main(String[] args) {
    new ConSub(4); // Create an instance of ConSub with the parameterized
constructor
  }
}
What will be the result:
2134
<mark>234</mark>
2431
214
```

```
Page 43
```

```
class Employee {
  private String name;
  private String neighborhood;
  private int salary;
  // Constructors, getters, and setters go here.
}
List<Employee> roster = new ArrayList<>();
    // Example employees
    roster.add(new Employee("Alice", "Downtown", 40));
    roster.add(new Employee("Bob", "Uptown", 25));
    roster.add(new Employee("Charlie", "Midtown", 50));
    Predicate<Employee> p = e -> e.getSalary() > 30;
    Function<Employee, Optional<String>> f = e ->
Optional.ofNullable(e.getNeighborhood());
Select the correct Option:

    Map<String, List<Employee>> r2 = roster.stream()

  .filter(p)
  .collect(Collectors.groupingBy(f, Employee::getNeighborhood));
```

Map<Optional<String>, List<Employee>> r5 = roster.stream()

```
.collect(Collectors.groupingBy(
   Employee::getNeighborhood,
   Collectors.filtering(p, Collectors.toList())
)); // Valid
  3. Map<Optional<String>, List<Employee>> r4 = roster.stream()
        .collect(Collectors.groupingBy(
         f,
          Collectors.filtering(p, Collectors.toList())
      )); // Valid
  4. Map<String, List<Employee>> r1 = roster.stream()
 .collect(Collectors.groupingBy(
   Employee::getNeighborhood,
   Collectors.filtering(p, Collectors.toList())
 )); // Valid
  5. Map<Optional<String>, List<Employee>> r3 = roster.stream()
 .filter(p)
 .collect(Collectors.groupingBy(p)); // Invalid
```

## Page 44

## Question

```
public class Test {
   public static void main(String... args) {
     int number = 0;
     Predicate<Integer> p = a -> a % 2 != 0;
     // line 1
     if(/* code needed here */) {
        System.out.println(number + " is odd.");
     } else {
        System.out.println(number + " is even.");
     }
}
```

Which statement on line 1 enables the code to compile?

# **Options**

```
if(p.test(number)) {

if(p.accept(number)) {

if(p.get(number)) {

if(p.apply(number)) {
```

### Page 45

```
public class Main {
  public static void main(String[] args) {
    Thread t1 = new Thread(new MyThread());
    Thread t2 = new Thread(new MyThread());
    Thread t3 = new Thread(new MyThread());
    t1.start();
    t2.run();
```

t3.start();

```
t1.start();
}
}
class MyThread implements Runnable {
  public void run() {
    System.out.println("Running.");
  }
}
```

Which one is correct?

### **Options**

Four threads are created.

The compilation fails.

An IllegalThreadStateException is thrown at runtime.

Three threads are created.

# Page 46

```
Given TripleThis.java

import java.util.function.*;

public class TripleThis {
    public static void main(String[] args) {
        Function tripler = x -> (Integer) (Integer) x * 3;
        TripleThis.printValue(tripler);
    }
    public static void printValue(Function f, T num) {
        System.out.println(f.apply(num));
    }
}
```

 $Compiling\ Triple This. java\ gives\ this\ compiler\ warning\ :$ 

Note: TripleThis.java uses unchecked or unsafe operations.

Which two replacements remove this compiler warning and prints 12?

# **Options**

Replace line 9 with Function tripler =  $x \rightarrow \{ return x * 3; \}$ 

Replace line 12 with public static void printValue(Function f, int num) {

Replace line 12 with public static void printValue(Function f, T num) {

Replace line 12 with public static void printValue(Function f, Integer num) {

Replace line 9 with Function tripler =  $x \rightarrow \{ return x * 3; \}$ 

Replace line 9 with Function tripler = x -> { return (Integer) x \* 3; }

#### PAGE NO:47

### Which statement is true?

- The code falls to compile as res2 should be declared as final.
- The code fails to compile as MyResource must implement Closeable.
- The code compiles successfully.
- The code fails to compile as try-with-resource needs a variable declaration such as MyResource r1 =res1; MyResource r2=res2;

```
public interface Converter {
                                                                       // LINE 1
  public static final double POUNDS_PER_KILOGRAM = 2.204627;
  public double tare();
  public double net();
  public default double gross() {
                                           // LINE 2
    return tare() + net();
  }public default double tare(String units) {
    return toUnit(tare(), units);
  }public default double net(String units) {
    return toUnit(net(), units);
  }public default double gross(String units) {
    return toUnit(gross(), units);
  }
  private static double toUnit(double kilograms, String unit) {
                                                                   // LINE 3
    switch (unit) {
      case "KILO":return kilograms;
      case "POUND":return kilograms * POUNDS_PER_KILOGRAM;
      default:throw new IllegalArgumentException();
    }
  }
}
```

### Which is true?

- Line 3 is the first line to cause a compilation error,
- Line 2 is the first line to cause a compilation error.

- Line 1 is the first line to cause a compilation error.
- It compiles without errors.

>1> 2.0> 4.0

```
PAGE NO:49
import java.util.List;
public class Main {
  public static void main(String[] args) {
    var lst = List.of(1, 2.0f, "4.0");
    for (var c : lst) {
       System.out.print(">" + c);
    }
    System.out.println();
                                              //n1
     lst.add(2, 3);
    for (int c = 0; c < lst.size(); c++) {
       display(lst.get(c));
    }
  }
  public static void display(var c) {
                                                                         //n2
    System.out.print(">" + c);
  }
}
What is the result?
```

- A compile time error occurs at line n2.
- >1> 2.0> 4.0 > 1> 2.0> 3> 4.0
- An exception is thrown at line n1.

```
39. Given the code fragment:

Locale locale = Locale.US;

//line1

Double currency = 1_00.00;

System.out.println(formatter.format(currency));

You want to display the value if currency as $100.00.

Which code inserted on line 1 will accomplish this?

a. NumberFormat formatter = NumberFormat.getInstance(locale);
```

- b. NumberFormat formatter = NumberFormat.getCurrencyInstance (locale);
- c. NumberFormat formatter = NumberFormat.getCurrency (locale);
- d. NumberFormat formatter =
   NumberFormat.getInstance(locale).getCurrency();
- 40. Given the code fragment:

```
public static void main (String[] args){
Var Ist = List.of(1, 2.0f, "4.0");
for(var c:lst){
   System.out.println(">"+c);
}
System.out.println();
                                         //line n1
Ist.add(2,3);
for(int c=0; c<lst.size();c++) {
   display(lst.get(c )));
}
public static void display(var c){
                                    //line n2
System.out.println(">"+c);
What is the result?
a. >1>2.0>4.0
   > 1>2.0>4.0
```

```
b. A compile time error occurs at line n2.
```

```
c. > 1> 2.0> 4.0
> 1> 2.0> 3> 4.0
```

d. An exception is thrown at line n1.

## 41. Which declaration of an annotation type is legal?

```
a. @interface Author {
   String name();
   String date;
b. @interface Author {
   String name();
   String date default "";
c. @interface Author extends Serializable {
   String name() default "";
   String date();
d. @interface Author {
   String name() default "";
   String date();
e. @interface Author {
   String name() default null;
   String date();
   }
```

```

## 9001: APPLICATION ERROR-9001-MyFile.txt

```
Qn:57
import java.util.List;
public class Two {
public static void main(String[] args) {
       var lst = List.of(1, 2.0f, "4.0");
       for (var c : lst) {
              System.out.print ("> " + c);
       }
System.out.println();
lst.add(2, 3);
                                    //line n1
for(int c = 0; c < lst.size(); c++)
{
       display(lst.get(c));
}
public static void display(var c){ //line n2
System.out.print ("> " + c );
}
What is the result?
1. > 1> 2.0> 4.0
   > 1> 2.0> 4.0
2. A compile time error occurs at line n2.
3. > 1> 2.0> 4.0
   > 1> 2.0> 3> 4.0
```

4. An exception is thrown at line n1.

### Page No 59:

```
public class ResourceTest {
    public static void main (String [] args) {
    final MyResource resl = new MyResource ();
    MyResource res2 = new MyResource ();
    try (resl; res2) {
        // do something
      } catch (Exception e) {}
    }
    static class MyResource implements AutoCloseable {
            public void close () throws Exception { }
      }
}
```

Which statement is true?

- A. The code fails to compile as res2 should be declared as final.
- B. The code fails to compile as MyResource must implement Closeable.
- C. The code compiles successfully.
- D. The code fails to compile as try-with-resource needs a variable declaration such as MyResource r1 = res1; MyResource r2 = res2;

```
public static void main(String[] args) {
       <u>List</u> clrs = List.of (new Color ("Red", 100),
new Color ("Yellow", 50),
new Color ("Red", 75),
new Color ("Yellow", 75));
Comparator hueSrtr = ( h1, h2) -> h1.hue.compareTo(h2.hue);
Comparator valueSrtr = (h1, h2) -> {
if (h1.<u>value</u> >= h2.<u>value</u>) {
       return 1;
}
else {
       return -1;
}
};
clrs.sort (hueSrtr.thenComparing (valueSrtr));
System.out.println (clrs);
}
}
What is the result?
   A. [Red: 75, Red: 100, Yellow: 50, Yellow: 75]
   B. [Yellow: 75, Yellow: 50, Red: 100, Red: 75]
   C. [Yellow:50, Yellow: 75, Red: 75, Red:100]
   D. An Exception is thrown at runtime.
   E. [Red: 100, Red: 75, Yellow: 75, Yellow:501]
```

### **DUMPs 2**

#### Question: 1

1. When running jdeps, which three ways include dependent nonmodular jar files?

jdeps -- module-path lib/file1.jar:lib/file2.jar:lib/file3.jar application.jar

jdeps -classpath lib/file1.jar:lib/file2.jar:lib/file3.jar application.jar

jdeps -- upgrade-module-path

lib/file1. jar:lib/file2.jar:lib/file3.jar application.jar

jdeps application.jar

jdeps lib/file1. jar:lib/file2.jar:lib/file3.jar application.jar

jdeps -cp lib/file1. jar:lib/file2.jar:lib/file3.jar application.jar

jdeps -- class-path lib/file1. jar:lib/file2.jar:lib/file3.jar application.jar

#### Question: 2

Your organization provides a cloud server to your customer to run their Java code. You are reviewing the

changes for the next release and you see this change in one of the config files:

old: JAVA\_OPTS="\$JAVA OPTS -Xms8g -Xmx8g"

new: JAVA OPTS="\$JAVA OPTS -Xms8g -Xmx8g -noverify"

Which is correct?

You reject the change because -Xms8g -Xmx8g uses too much system memory.

You reject the change because -noverify is a critical security risk.

You accept the change because -noverify is a standard option that has been supported since

Java 1.0.

You accept the change because -noverify is necessary for your code to run with the latest

version of Java.

### Question: 3

```
Which module defines the foundational APIs of the Java SE Platform?
java.lang
java.se
java.object
java.base
Question: 4
Given the code fragment:
Supplier supplier = () -> "Hello World";
// line 1
Which statement on line 1 is calling the method of the supplier object correctly
System. out.println (supplier.accept ());
System. out.println (supplier.get ());
System. out.println (supplier.test ());
System. out.println (supplier.apply ())
Question: 5
Which two statements are true about running code on the class path and the module
path?
A modular JAR placed on the -classpath results in an automatic module.
A modular JAR placed on the -classpath results in a named application module.
A non-modular JAR placed on the -classpath results in an unnamed module.
A modular JAR placed on the -- module-path results in a named application module.
A non-modular JAR placed on the -- module-path results in a named application
module.
Question: 6
Which declaration of an annotation type is legal?
@interface Author {
```

String name () default "";

```
String date ();
@interface Author {
String name ();
String date default "";
@interface Author extends Serializable {
String name () default "";
String date ();
@interface Author {
String name ();
String date;
@interface Author {
String name () default null;
String date ();
Question: 6
Which two statements are correct about modules in Java?
1)module-info. java can be placed in any folder inside module-path.
2)By default, modules can access each other as long as they run in the same folder.
3)A module must be declared in module-info. java file.
4) java. base exports all of the Java platforms core packages.
5)module-info. java cannot be empty.
Question: 6
Given the data of the BNF table:
ID NAME DEPT
101 SMITH HR
102 JONES ENG
103 WEAVER HR
```

```
Assuming that jdbcURL, username, and password are declared and initialised.
```

```
try (Connection conn = DriverManager.getConnection(jdbcURL, username,
password);
PreparedStatement query conn.prepareStatement ("SELECT ID, NAME FROM EMP
WHERE DEPT=?");
PreparedStatement update = conn.prepareStatement("INSERT INTO RECRUITING (ID,
NAME) VALUES (?, ?)"){
query.setString(1, "HR");
ResultSet rs query.executeQuery();
while (rs.next()) {
update.setObject(1, rs.getObject (1, Integer.class), JDBCTYPE. INTEGER);
update.setObject (2, rs.getObject (2, String.class), JDBCType.VARCHAR);
update.execute();
}
}
Which two happen upon execution?
a. A SQLException is thrown because the Resultset is not closed.
b. Three PreparedStatement objects are created
c. Three SQL statements are executed
Question: 6
public class X {
private Collection collection:
public void set (Collection collection) {
this.collection collection;
}
}
and
```

```
public class Y extends X {
public void set (Map map) {
super.set(map); // line 1
}
}
Which two lines can replace line 1 so that the Y class compiles?

    map.forEach((k, v) -> set (v)));

   set (map.values());

    super.set (List map)

   super.set(map.values());
   set (map)
Corrected code -
import java.util.Collection;
import java.util.Map;
public class X {
private Collection collection;
public void set(Collection collection) {
this.collection = collection;
}
public class Y extends X {
public void set(Map map) {
super.set(map.values()); // Correct replacement for compilation
// set(map.values()); // Also correct if you want to call inherited set method
}
}
```

### Question: 7

```
Which is a valid statement?
a. Predicate testEquality = (var, var y) -> (x.equals(y));
b. BiPredicate testEquality= (var x,y)-> (x.equals(y));
c. BiPredicate testEquality= var x, var y-> (x.equals());
d. BiPredicate testEquality= (var x, Integer y)-> (x.equals(y)):
Question: 8
public class Person {
private String name;
public Person(String name) {
this.name = name;
}
public String toString() {
return name;
}
}
public class Tester {
static Person p = null;
public static void main(String[] args) {
p = checkPerson(p);
System.out.println(p);
Person p1 = new Person("Joe");
p1 = checkPerson(p1);
System.out.println(p1);
}
public static Person checkPerson(Person p) {
```

```
if (p == null) {
p = new Person("Mary");
return p;
}
}
Ans: Mary Joe
Question: 10
Given:
public class Resource implements AutoCloseable {
public Resource() {
System.out.print("A");
}
@Override
public void close() {
System.out.print("B");
}
public void printResource() {
System.out.print("C");
}
and
try (Resourcer = new Resource()){
r.printResource();
} finally {
System.out.print("D");
}
```

What is the result?	
a) ADBC	
b) ACD	
c) ACH	
d) ACAD	
Question:12	
Which module defines the foundational APIs of the Java SE Platform	?
a. java.lang	
b. java.se	
c. java.base	
d. java.object	
Question: 13	
Given the code fragment:	
int i = 0;	
for(;i	
System. out.print (++i + " "); }	
What is the result?	
a) 1 3 5 7 9 11	
b) 13 5 7 9	
c) 2468	
d) 2 4 6 8 10	
Question: 14	
Given the code fragment:	
var i = 10;	
var j = 5;	
i += (j * 5+i) / j - 2;	

```
System.out.println (i);
What is the result?
a) 21
b) 15
c) 23
d) 11
e) 5
Question: 15
Given the code fragment:
public class Test {
private final int x = 1;
static final int y;
public Test () {
System.out.print(x);
System.out.print(y);
}
public static void main (String args[]) {
new Test ();
What is the result?
The compilation fails at line 16.
The compilation fails at line 9.
1
The <u>compilation</u> fails <u>at</u> line 13.
10
Question: 16
```

```
Assuming the bodies are correct, which will result in a compilation error?
a. class Foo{
a. public foo(BiFunction op) {...}
}
b. public void foo {BiFunction predicate) {...}
c. public BiFunctionct predicate (Function transform){...}
d. public BiFunction foo;`
Question: 17
Given:
public class Main {
public static void main(String[] args) {
Optional value = createValue();
String str= value.orElse ("Duke");
System.out.println(str);
}
static Optional createValue() {
String s = null;
return Optional.ofNullable(s);
What is the output?
a) A NullPointerException is thrown at run time.
b) A NoSuchElement Exception is thrown at run time.
c) Duke
d) null
Question: 18
Given,
```

```
var c = new CopyOnWriteArrayList<>(List.of("1", "2", "3", "4"));
Runnable r = () \rightarrow \{
try {
Thread.sleep (150);
}
catch (InterruptedException e) {
System. out. println (e);
c.set(3, "four");
System.out.print(c + " ");
};
Thread t = new Thread(r);
t.start();
for (var s: c) {
System.out.print(s + " ");
Thread.sleep(100);
}
What is the output?
a) 1 2 [1, 2, 3, 4] 3 four
b) 1 2 [1, 2, 3, four] 3 four
c) 1 2 [1, 2, 3, four] 3 4
d) 1 2 [1, 2, 3, 4] 3 4
Question: 19
Which two are valid statements?
a) BiPredicate test = (final Integer x, var y) -> (x.equals(y));
b) BiPredicate test \equiv (final var x, \underline{y}) -> (x.equals(y));
```

```
c) BiPredicate test = (var x, final var y) -> (x.equals(y));
d) BiPredicate test = (Integer x, final var y) -> (x.equals(y));
e) BiPredicate test = (Integer x, final Integer y) -> (x.equals(y));
Question: 21

Examine this excerpt from the declaration of the java.se module: module java.se {
...
requires transitive java.xml;
...
```

What does the transitive modifier mean?

- a) Only a module that requires the java.se module is permitted to require the java.xml module.
- b) Any module that requires the java.xml module does not need to require the java.se module.
- c) Any module that attempts to require the java.se module actually requires the java.xml module instead.
- d) Any module that requires the java.se module does not need to require the java.xml module.

### **Question: 28**

}

```
Given the code fragment:

StringBuilder s = new StringBuilder("ABCD");

Which would cause s to be AQCD?

a. s.replace(s.indexOf("B"), s.indexOf("B"), "Q");

b. s.replace(s.indexOf("B"), s.indexOf("C"), "Q");

c. s.replace(s.indexOf("A"), s.indexOf("C"), "Q");

d. s.replace(s.indexOf("A"), s.indexOf("B"), "Q");
```

### Question:29

```
Which three initialization statements are valid?
a. var loc = List.of("UK", "US");
b. var loc = Set.of("UK", "US");
c. var loc = Set.of ("UK", "US", "UK");
d. var loc = List.of("UK", null, "US");
e. var loc = Arrays.of("UK", "US", "ES");
f. var loc = ArrayList.of("UK", "US");
g. var loc = Map.of ("UK", 1, "US", 2);
Question:30
Given:
public class Main {
public static void main(String... args) {
var list new ArrayList( List.of("Coffee", "Cappucino", "Latte"));
list.forEach((item) -> (
list.remove(item);
});
System.out.println(list);
}
What is the result?
a. [Coffee, Cappucino, Latte]
b. A java.lang.NullPointerException is thrown.
c. It prints []
d. A java.util.concurrentModificationException is thrown.
e. It prints null
Question:31
@Target ((TYPE, METHOD))
@interface Resource ()
/*Loc1*/ class Manager extends /* Loc2 */ Person {
```

```
/* Loc3 */ Manager() {...}
/* Loc4 */ String getDepartmentName() {...}
/* Loc5 */String departmentName;
}
In which two locations is it legal to apply the Resource annotation? (multiple choice)
a. Loc3
b. Loc2
c. Loc 4
d. Loc 1
e. Loc 5
Question:33
Given:
class Super {
final int num // line n1
public Super (int num){
this.num = num;
}
final void method(){
System.out.println("Output from Super");
}
class Sub extends Super{
int num; // Line n2
Sub (short num) { // line n3
super (num);
}
protected void method() { // line 14
```

```
System.out.println("Output from Sub");
Which line of code results in a compilation error?
a. line n3
b. line n2
c. line n4
d. line n1
Question: 35
Given:
public class Foo {
private void print(){
System.out.println("Bonjour le monde!");
}
public void foo() {
print();
}
}
public class Bar extends Foo (
private void print() (
System.out.println("Hello world!");
}
public void bar() {
print();
}
public static void main(String... args) {
Bar b = new Bar();
```

```
b.foo();
b.bar();
}
}
a. Bonjour le monde!
Hello world!
Question:36
Given:
package a;
abstract class A (
void print() {
System.out.print("Base class");
}
}
and
package a;
public class B extends A {
protected void print() {
System.out.print("Derived class");
}
public static void main(String args[]){
Bb new B();
((A)b).print();
}
What is the output?
```

```
a. An exception is thrown at runtime.
b. Base class
c. The compilation fails.
Question: 37
Given:
Path v1 = Paths.get("/./forest/./").resolve (Paths.get("tree.txt"));
Path v2 = new File("/forest/./water/../tree.txt").toPath();
System.out.print (Files.isSame File (v1, v2));
System.out.print ("" +vl.equals (v2));
System.out.print ("" +vl.normalize().equals (v2.normalize ()));
Assuming all referenced paths exist within the file system, what is the result?
true false true
false true true
true true true
false false true
Question: 36
Given the code fragment:
public class City (
public static void main(String[] args) {
String[] towns = ("boston", "paris", "bangkok", "oman"); Comparator ms = (a, b)
->b.compareTo(a);
Arrays.sort (towns, ms);
System.out.println(Arrays.binarySearch (towns, "oman", ms));
}
What is the result?
```

```
-3
2
1
-1
Question: 42
Given the code fragment:
ExecutorService es = Executors.newCachedThreadPool (); es.execute(()->
System.out.print ("Ping ")); // line 1
System.out.println(future.get()); // line 2
es.shutdown ();
Which statement at line 1 will print Ping Pong?
   Future future = es.submit(() -> "Pong");
   • Future future = new Callable () {
public String call() throws Exception { return "Pong";
}
}.call();
   • Future future = es.execute(() -> "Pong");
   • Future future = es.invokeAny (new Callable() { public String call() throws
      Exception {
return "Pong";
}
});
Question: 39
Given TripleThis.java:
6:import java.util.function.Function;
7:public class Tester {
8: public static void main(String[] args) {
```

```
9: <u>Function</u> tripler = x -> { return (Integer) x * 3; };
10: Tester.printValue(tripler, 4);
11: }
12: public static void printValue(Function f, T num) {
13: System. out. println(f.apply(num));
14: }
15: }
Compiling TripleThis.java gives this complier warning:
Note: TripleThis.java uses unchecked or unsafe operation.
Which two replacements remove this compiler warning and prints 12?
a. Replace line 9 with Function tripler = x \rightarrow \{ return x^* 3; \}
b. Replace line 12 with public static void printValue (Function f, Integer num)
c. Replace line 9 with Function tripler = x \rightarrow \{ return x * 3; \}
d. Replace line 9 with Function tripler = x \rightarrow \{ return (Integer) x *3; \}
e. Replace line 12 with public static void printValue (Function f, int num)
f. Replace line 12 with public static void printValue (Function f, T num)
Question:40
Path v1 = Paths.get("/./forest/./").resolve(Paths.get("tree.txt"));
Path v2 = new File(*/forest/./water/../tree.txt").toPath();
System.out.print(Files.isSameFile(v1, v2));
System.out.print(" "+ v1.equals(v2));
System.out.print(""+ v1.normalize().equals(v2.normalize()));
Assuming all referenced paths exist within the file system, what is the result?
a. true true true
b. false true true
c. true false true
```

### d. false false true

### Question:43

Your organization provides a cloud server to your customer to run their java code. You are reviewing the changes for the next release and you see this change in one of the config files:

```
old: JAVA_OPTS = "$JAVA_OPTS -Xms8g -Xmx8g"
new: JAVA_OPTS = "$JAVA_OPTS -Xms8g -Xmx8g -noverify"
which is correct?
```

- a. You reject the change because -noverify is a critical security risk.
- b. You reject the change because Xms8g -Xmx8g uses too much system memory.
- c. You accept the change because -noverify is necessary for your code to run with the latest version of java. is a standard option that has been supported since java 1.0
- d. You accept the change because -noverify is a standard option that has supported since java 1.0.

### Question:45

```
Given these declarations:

String eName = "SMITH";

String empId = "42";

And these two code fragments:

Fragment 1:

Statement stmt = conn.createStatement();

String sql = "INSERT INT EMP VALUES ("" + eName + "","" + empId + "")";

stmt.executeUpdate(sql);

Fragmant 2:

String sql1 = "INSERT INTO EMP VALUES (?,?)";

PreparedStatement pstmt = conn.prepareStatement(sql1);

pstmt.setObject(1, eName, JDBCType.VARCHAR);

pstmt.setObject(2, empId, JDBCType.VARCHAR);
```

```
pstmt.executeUpdate();
Which code fragment is preferred and why?
a. Fragment 1 because it is shorter.
b. Fragment 1 because it is more performant.
c. Fragment 2 because it explicitly specifies the SQL types of the column values.
d. Fragment 2 because it prevents SQL injection.
Question:46
public class Tester {
private int x;
private static int y;
public static void main(String[] args) throws Exception{
Tester t1 = new Tester();
t1.x = 2;
Tester.y = 3;
Tester t2 = new Tester();
t2.x = 4;
t2.<u>y</u> =5;
System.out.println(t1.x + "," + t1.y);
System. out. println(t2.x + "," + Tester.y);
System. out. println(t2.x + ","+ t1.y);
}
}
what is the result?
a. 2,5 4,5 4,5
b. 2,3 4,5 4,5
c. 2,3 4,5 4,3
```

```
d. 2,3 4,3 4,5
Question: 47
Given:
class Item{
public String name;
public int count;
public Item(String name, int count) {
this.name = name;
this.count = count;
}
}
And the code fragment:
public class Tester {
public static void main(String[] args) {
var items = List.of(new Item("A", 10), new Item("B",2), new Item("C",12), new
Item("D", 5), new Item("E",6));
//line 1 {
System.out.println(items);
}
Which code fragment ay line 1 will accomplish this?
a. if(items.stream().anyMatch(i -> i.count < 0))
b. if(items.stream().filter(i -> i.count< 0).findFirst())
c. if(items.stream().allMatch(i -> i.count < 0))
d. if(items.stream().filter(i -> i.count < 0).findAny())</pre>
Question 47:
Given the code fragment:
Stream data IntStream.range (1, 10000).boxed();
```

```
Integer sum = data.mapToInt (a -> a).sum();
//line 1
Which two code fragments, independently, replace line 1 to implement the
equivalent reduce operation?
Which two code fragments, independently, replace line 1 to implement the
equivalent reduce operation?
A) OptionalInt value Integer sum data.mapToInt (a -> a).parallel().reduce(0, (a, b) -
a+b); value.getAsInt();
B) Integer sum data.mapToInt (a> a).reduce(0, (a,b)->a+b):
C) OptionalInt value data.mapToInt (a -> a).parallel().reduce((a, b) -> a+b);
Integer sum value.getAsInt();
D) int = 0;
Integer sum data.map(a -> a).reduce(0, (a-> a+ 3));
E) Integer sum data.map(a -> a).reduce((a, b) -> a+b);
Question: 48
Why would you choose to use a peek operation instead of a forEach operation on a
Stream?
a. To process the current item and return a stream.
b. To remove an item from the end of the stream.
c. To remove an item from the beginning of the stream.
d. To process the current item and return word.
Question: 49
List list1 = new ArrayList<>();
list1.add("A");
list1.add("B");
List list2 = Collections.unmodifiableList(list1);
<u>list1</u>.add("C");
```

System.**out**.println(list1);

```
System.out.println(list2);
What is the result?
a. [A, B, C]
[A, B, C]
b. On line 9, an exception is thrown at run time.
c. [A, B, C]
[A, B]
d. [A, B, C]
Followed by an exception thrown on line 11.
Question:50
LocalDate d1 = LocalDate.now():
d1.plusDays(1);
d1.minusMonths(2);
LocalDate d2 = d1.plusWeeks(3);
d2.minusDays(4):
d2= null;
How many LocalDate objects are created in this example?
a. 4
b. 5
c. 3
d. 2
Question:51
Which two assignments create Locale instances?
☐ locale = "en-USA";
\square locale = "fr_FR";
□ locale = Locale.getDefault();
☐ locale = new Locale("en", "GB");--a
☐ locale = Locale.getAvailableLocales();--a
```

## Question:52

```
class ConSuper {
protected ConSuper() {
this(2);
System.out.print("3");
protected ConSuper(int a) {
System.out.print(a);
}
}
and
public class ConSub extends ConSuper {
ConSub() {
this(4);
System.out.print("1");
ConSub(int a) {
System.out.print(a);
public static void main(String[] args) {
new ConSub(4);
}
What is the result?
a)2134
b)2341
c)214
d)234
```

# Question:53

Which two statements are true about running code on the class path and the module path?

$\square$ A modular JAR placed on the -classpath results in a named application module.
$\square$ A modular JAR placed on themodule-path results in a named application
modulea

```
☐ A non-modular JAR placed on the -classpath results in an unnamed module.--a
☐ A modular JAR placed on the -classpath results in an automatic module.
☐ A non-modular JAR placed on the --module-path results in a named application
module.
Question:54
public class A {
int a = 0;
int b = 0;
int c = 0;
public void foo(int i) {
a += b * i;
c = b * i;
}
public void setB(int i) {
b = i;
Which makes class A thread safe?
a.Make A synchronized.
b.Make setB synchronized.
c.Class A is thread safe.
d.Make foo synchronized.
e.Make foo and setB synchronized.
Question:55
@Target({TYPE, METHOD})
@interface Resource {}
/* Loc1 */ class Manager extends /* Loc2 */ Person {
/* Loc3 */ Manager() {...}
/* Loc4 */ String getDepartmentName() {...}
/* Loc5 */ String departmentName;
```

```
In which two locations is it legal to apply the @Resource annotation?
□Loc5
□Loc4
□Loc3
□Loc1
□Loc2
Question:56
public class Tester {
public static void main(String args[]) {
String a = "10";
try {
int x = 0;
x = Integer.parseInt(a, 2); // line 1
System.out.println("X is " + x);
} catch (NumberFormatException e) {
System.out.println("Error parsing value of " + x); // line 2
}
What is the result?
a)X is 2.
b) Error parsing value 0
c)The compilation fails due to an error in line 2.
d)The compilation fails due to an error in line 1.
e)X is 10.
Question:57
public class Person {
private String name = "Green";
public void setName(String name) {
String title = "Mr. ";
this.name = title + name;
}
```

```
public String toString() {
return name;
}
and
public class Test {
public static void main(String args[]) {
Person p = new Person();
p.setName("Blue");
System.out.println(p);
}
What is the result?
a)Green
b)An exception is thrown at runtime.
c)Mr. Green
d)Mr. Blue
Question:58
Which three initialization statements are correct?
· float x = 1f;
· int[][][] e = {{1,1,1},{2,2,2}};
· boolean false = (4 != 4);
\cdot short sh = (short)'A';
\cdot int x = 12 34;
· byte b = 10;char c = b;
· String contact# = "(+2) (999) (232)";
Question:59
Given the code fragment:
var i = 10;
```

```
var j = 5;
i += (j * 5 + i) / j - 2;
System.out.println(i);
What is the result?
1. 11
2.21
3. 15
4. 23
5.5
Question:60
Given:
int i = 3;
int j= 25;
System.out.println(i > 2?i > 10?i*(j+10):i*j + 5:i);
What is the result?
1.385
2.25
3.3
4. The compilation fails.
5.80
Question:61
Given: class Employee {
String office; } and the code fragment:
5. public class HRApp {
6. var employee = new ArrayList();
7. public var display() {
```

```
8. var employee = new Employee();
9. var offices = new ArrayList<>();
10. offices.add("Chicago");
11. offices.add("Bangalore");
12. for (var office : offices) {
13. System.out.print("Employee Location: " + office);
14. }
15. }
16. }
Which two lines cause compilation errors?
1. line 12
2. line 7
3. line 9
4. line 6
5. line 8
```

# Question:62

Given:

```
1.List fruits = List.of("banana", "orange", "apple", "lemon");
fruits.sort(new Comparator() {
  @Override
  public int compare(String m, String n) {
  return n.compareTo(m);
}
});
```

Which statement will refactor line 2 to use a lambda expression?

```
1. fruits.sort((String d, String e)-> {e.compareTo(d); });
2. fruits.sort((a, b) -> {return b.compareTo(a); });
3. fruits.sort(o, p->p.compareTo(o));
4. fruits.sort((String x, y)-> {return y.compareTo(x));
Question:63
Given the code fragment:
1. var list = List. of (1,2,3,4,5,6,7,8,9,10);
2. UnaryOperator u = i -> i *2;
3. list. replaceAll (u);
Which can replace line 2?
1. UnaryOperator u = (var i) ->(i *2);
2. UnaryOperator u = i -> { return i * 2);
3. UnaryOperator u = var i -> { return i *2; };
4. UnaryOperator u = (int i) -> i *2;
Question:64
interface AbilityA {
default void action () {
System. out. println ("a action");
}
}
and
interface AbilityB {
void action ();
}
and
public class Test implements AbilityA, AbilityB {
```

```
public void action () {
System.out.println ("ab action");
}
public static void main (String [] args) {
// line 2
AbilityB x = new Test ();
x.action();
}
}
What is the result?
An exception is thrown at run time.
1. a action
2. The compilation fails on line 1.
3. ab action
4. The compilation fails on line 2.
Question:65
public interface ExampleInterface {
int one = 1;
static int two = 2;
static final int three = 3;
}
public class ExampleClass implements ExampleInterface {
public static void main (String [] args) {
ExampleInterface theInstance = new ExampleClass ();
}
}
```

```
Which three statements cause a compiler error when inserted at line 1?
int a = one++;
int b = two;
int d = ExampleInterface. one;
int h = theInstance. two;
int e = ExampleInterface.two++;
int c = three;
int i = theInstance. three++;
int f = ExampleInterface.three;
int g = theInstance.one;
Question:66
public interface AdaptorFirst {
void showFirst ();
}
Which three classes successfully override showFirst ()?
1. public class MainClass implements AdaptorFirst {
public void showFirst () {
System. out. println ("first");
}
2. public abstract class MainClass implements AdaptorFirst {
public void showFirst (){
System. out.println ("first");
}
3. public abstract class MainClass implements AdaptorFirst {
```

```
public abstract void showFirst ();
4. public class MainClass implements AdaptorFirst {
private void showFirst () {
System. out.println ("first");
}
}
5. public class MainClass implements AdaptorFirst {
void showFirst ();
}
6. public abstract class MainClass implements AdaptorFirst{
}
Question:67
class Test {
void display (int i) {
System. out. println ("one");
}
void display (long l) {
System. out.println("two");
}
public static void main (String [] args) {
new Test().display(0B1010_0101_1001_0110);
}
What is the result?
1. The compilation fails.
```

- 2. two
- 3. one
- 4. A NumberFormatExcpetion is thrown at runtime.

```
Question:68
class NoMatchException extends RuntimeException {}
public class Test{
public static void main (String[] args) {
try {
if ("oracle". equals ("ORACLE".toLowerCase())){
throw new NoMatchException ();
}
}
catch (NoMatchException | NullPointerException npe) {
System. out.println ("Exception 1");
}catch (RuntimeException e) {
System.out.println ("Exception 2");
}catch (Exception e) {
System. out.println ("Exception 3");
}finally{
System.out.println ("Finally Block");
}
}
}
How many lines of text does this program print?
1. four
2. three
```

```
3. one
4. two
Question:69
Given:
LocalDate dl = LocalDate.now ();
dl.plusDays (1);
dl = d1. minusMonths (2);
LocalDate d2 = d1.plusWeeks (3);
d2.minusDays(4);
d2 = null;
How many LocalDate objects are created in this example?
1.5
2.3
3. 2
4.4
Question:70
class MyType {
private T value;
public T getValue () {
return value;
}
public void setValue (T value) {
this. value = value;
}
public class Test {
```

```
public static void main (String ... args) {
MyType strType = new MyType<> ();
MyType type = new MyType<> ();
strType.setValue ("test");
type. setValue (null);
System.out.println(strType.getValue() + ":" + type.getValue());
}
What is the result?
1. test:null
2. An Exception Is thrown at runtime.
3. The compilation fails.
4. null:null
5. test: 0
Question: 71
Given:
class MyPersistenceData {
String str;
private void methodA () {
System.out.println("methodA");
}
}
You want to implement the java.io. Serializable interface to the MyPersistenceData
class.
Which method should be overridden?
a.The readExternal method
b.The readExternal and writeExternal method
```

```
c.The writeExternal method
d.Nothing
Question: 72
Given:
public enum Season {
WINTER ('w'), SPRING ('s'), SUMMER ('h'), FALL('f');
char c;
private Season (char c) {
this.c = c;
}
}
and the code fragments:
public static void main(String[] args) {
Season [] sA = Season.values();
// line nl
}
Which three code fragments, at line nl, prints SPRING?
a.System.out.println (Season.valueOf("SPRING").ordinal());
b.System.out.println(sA[0]);
c.System.out.println(sA[1]);
d.System.out.println (Season. SPRING);
e.System.out.println (Season. values (1));
f.System.out.println (Season.valueof ("SPRING"));
g.System.out.println (Season.valueOf('s'));
Question: 73
```

Which two statements are correct about modules in Java?

a.A module must be declared in module-info.java file.

b.module-info.java can be placed in any folder inside module-path.

c.By default, modules can access each other as long as they run in the same folder.

d.module-info.java cannot be empty.

e.java.base exports all of the Java platforms core packages.

## Question: 73

Which statement is true?

a.System.exit () Invokes the close () method for the InputStream/OutputStream resources.

b.PrintWriter outputs characters and automatically flushes the stream.

c.PrintStream outputs only bytes.

d.Console.readPassword () method encrypts the text entered.

## Question: 82

```
package Q82;

public class StrBldr {
    // Add your class content here
    static StringBuilder abl= new StringBuilder("yo ");
    static StringBuilder sb2= new StringBuilder("hi ");
    public static void main(String[] args) {
        <u>sb1=sb1</u>.append(new StrBldr().foo(new StringBuilder("hey")));
        System.out.println(sb1);
    }
    StringBuilder food(StringBuilder builder) {
        <u>ab1=ab1</u>.append(builder+" oh ");
}
```

```
return sb2;
    }
}
//compile time error occured
   • <u>yo hi</u>
   • hey oh hi yo
   • yo hi hey oh
   • compile time error
   • hey oh <u>yo hi</u>
Question: 84
package Q84;
public class ResourceTest {
  // Add your class content here
    public static void main(String[] args) {
         final MyResource res1 = new MyResource();
        MyResource res2 = new MyResource();
        try(res1;res2){
             //do something
        }catch(Exception e) {
             //catch exception
        }
    }
    static class MyResource implements AutoCloseable{
         @Override
```

```
public void close() throws Exception {
      // TODO Auto-generated method stub
}
}
```

- The code fails to compile as MyResource must implement closable
- The code fails to compile as try with resources needs a variable declaration such as (MyResource r1 = res1; MyResource r2 = res2;)
- The code fails to compile as res2 should be declared as final
- The code compiles successfully

# Question: 87

```
package Q87;

final class X {
    // Add your class content here
    public static X createX(double amount) {
        return new X(amount);
    }

    public double amount;

    private X(double amount) {
        this.amount=amount;
    }

    public String toString() {
```

```
return String.valueOf(amount);
}

public final class Main{
   public static void main(String[] args) {
        X x = X.createX(100.0);
        x.amount=500.0;
        System.out.println(x);
   }
}
```

- 100.0
- a java.lang.lllegalAccessException is thrown
- 500.0
- The compilation fails

Question: Which three classes successfully override showFirst()?

public abstract class Mainclass implements AdaptorFirst {
 public string showFirst (){
 return "first";
 }

public class Mainclass implements AdaptorFirst {
 public void showFirst () {

```
System.out.println("first");
}
}
       public abstract class MainClass implements AdaptorFirst {
public void showFirst () {
System.out.println("first");
}
       public class MainClass implements AdaptorFirst {
void showFirst();
}
       public abstract class MainClass implements AdaptorFirst {
public abstract void showFirst();
}
       public class MainClass implements AdaptorFirst {
private void showFirst () {
System.out.println("first");
}
Question: 37
Given:
Path v1 =
Paths.get("/./forest/./").resolve (Paths.get("tree.txt"));
Path v2 = new File("/forest/./water/../tree.txt").toPath(); System.out.print
(Files.isSame File (v1, v2)); System.out.print ("" +vl.equals (v2));
System.out.print ("" +vl.normalize().equals (v2.normalize ()));
Assuming all referenced paths exist within the file system, what is the result?
true false true
```

```
true true true
false false true
36. Given the code fragment:
public class City (
public static void main(String[] args) {
String[] towns = ("boston", "paris", "bangkok", "oman"); Comparator ms = (a, b) -
>b.compareTo(a);
Arrays.sort (towns, ms);
System.out.println(Arrays.binarySearch (towns, "oman", ms));
}
}
What is the result?
-3
2
1
-1
Question
int x = 0;
while (x < 10) {
System.out.print (x++);
Which "for" loop produces the same output?
   • for (int c = 0; ; c++) {
System.out.print (c);
if (c == 10) {
break;
```

false true true

```
}
}
   • for (a; a < 10; a++) {
System.out.print (a);
}
   • for (int d = 0; d < 10; ) {
System.out.print (d);
++d;
}
   • int b = 0;
for(; b < 10; ) {
System.out.print(++b);
}
Question
public static void main(String... args) {
String filename = "/u01/work" + args[0];
// line n1
// ...
You want to validate a path name before reading the file. Before validation, all path
names should be canonicalized. Which code inserted on line n1 will accomplish this?
       Path file = Paths.get(filename);
Path canonicalPath = file.toAbsolutePath().toString();
FileInputStream fis = new FileInputStream(canonicalPath);

    File file = new File(filename).getAbsoluteFile();
```

FileInputStream fis = new FileInputStream(file);

• File file = new File(filename);

```
String canonicalPath = file.getCanonicalPath();
FileInputStream fis = new FileInputStream(canonicalPath);
   Path file = Paths.get(filename);
String canonicalPath = file.normalize().toString();
FileInputStream fis = new FileInputStream(canonicalPath);
Question: 98.
StringBuilder txt1 = new StringBuilder("PPQRRRSTT");
int i = 0;
a: while (i < txt1.length()) {
char x = txt1.charAt(i);
int j = 0;
i++;
b:
while (j < txt1.length()) {
char y = txt1.charAt(j);
if (i != j && y == x) {
txt1.deleteCharAt(j);
// line 1
}
j++;
}
}
System.out.println(txt1);
"Which two statements inserted independently at line 1 enable this code?"
The options provided are:
```

break a;

```
• continue a;
   j--;
   • i--;
Question 99
package com.ltim.dumps;
class Person {
private String name;
public Person(String name) {
this.name = name;
}
@Override
public String toString() {
return name;
}
public class Tester {
static Person p = null;
public static void main(String[] args) {
p = checkPerson(p);
System.out.println(p);
Person pl = new Person("Joe");
pl = checkPerson(pl);
System.out.println(pl);
public static Person checkPerson(Person p) {
if (p == null) {
```

```
p = new Person("Mary");
return p;
}
}
What is the result?
a) Joe
Joe
b) Mary
Mary
c) null
null
d) Mary
Joe
Question 100
package com.ltim.dumps;
class Thing {
int x, y, z;
public Thing() {
this(2, 1);
System.out.println(x + ", " + y + ", " + z);
}
public Thing(int x) {
this.x = x;
System.out.println(x + ", " + y + ", " + z);
}
```

```
public Thing(int x, int y) {
this(x);
this.y = y;
System.out.println(x + ", " + y + ", " + z);
}
}
public class Tester {
public static void main(String[] args) {
Thing <u>t1</u> = new Thing();
}
}
Answer:
2,0,0
2,1,0
2,1,0
0,0,0
2,1,0
2,0,0
0,0,0
1,0,0
2,1,0
1,0,0
1,1,0
0,0,0
Question: 101
package com.ltim.dumps;
public class File {
```

```
String filename = "/u01/work" + args [0];
//line n1...
// ...
}
You want to validate a path name before the read file. Before validation, all path
names should
canonicalized.
Which code inserted on line n1 will accomplish this?
a) Path file = Paths.get (filename);
Path canonicalPath = file.toAbsolutePath ().toString();
b) FileInputStream fis = new FileInputStream (canonicalPath);
File file = new File(filename) .getAbsoluteFile ();
c) FileInputStream fis = new FileInputStream(file);
Path file = Paths.get (filename);
d) String canonicalPath = file.normalize() .toString();
FileInputStream fis = new FileInputStream (canonicalPath);
e) File file = new File (filename);
String canonicalPath = file.getCanonicalPath();
FileInputStream fis = new FileInputStream(f);
Question 102
public class Tester {
public static void main(String[] args) {
String s = "hat at store";
int x = s.indexOf("at");
```

```
s.substring(x + 3); // This line has no effect on the string 's'
x = s.indexOf("at");
System. out. println(s + " " + x);
}
}
What is the result?
a) hat at store 1
b) hat at store 4
c) An IndexOutOfBoundsException is thrown at runtime.
d) at once 1
e) at once 0
Question 103
Given the code fragment:
public class City (
public static void main (String [ ] args)
String [] towns = { "boston", "paris", "bangkok", "oman"};
Comparator ms - (a, b) -> b. compareTo (a);
Arrays. sort (towns, ms);
System.out.println(Arrays.binarySearch(towns, "oman", ms));
What is the result?
a) -1
b) 2
c) -3
d) 1
Question 104
public class Strbldr {
static StringBuilder sb1 = new StringBuilder("yo ");
StringBuilder sb2 = new StringBuilder("hi ");
public static void main(String[] args) {
sb1 = sb1.append(new Strbldr().foo(new StringBuilder("hey")));
```

```
System.out.println(sb1);
StringBuilder foo(StringBuilder s) {
System.out.print(s + " oh " + sb2);
return new StringBuilder("ey");
}
}
What is the result?
A. yo ey
B. A compile time error occurs.
C. oh hi hey
D. hey oh hi ey
E. hey oh hi yo ey
F. hey oh hi
Question 105
class Scope {
static int myint=666;
public static void main (String[] args) {
int myint = myint;
System.out.println(myint);
}
}
Which is true?
A. Code compiles but throws a runtime exception when run.
B. The code does not compile successfully.
```

C. It prints 666.

D. The code compiles and runs successfully but with a wrong answer (i.e., a bug).

## **Corrected Code**

```
class Scope {
static int myint=666;
public static void main (String[] args) {
int myint = Scope.myint;
System.out.println(myint);
}
}
Question 106
public class Person {
private String name = "Green";
public void setName (String name) {
String title = "Mr. ";
this.name = title + name;
}
public String toString () {
return name;
}
}
and
public class Test {
public static void main (String args []) {
Person p = new Person ();
p.setName("Blue");
```

```
System.out.println(p);
}
}
What is the result?
A. An exception is thrown at runtime.
B. Mr. Green
C. Mr. Blue
D. Green
Question 107
public enum Season {
WINTER('w'), SPRING('s'), SUMMER ('h'), FALL ('f');
char c;
private Season (char c) {
this.c=c;
}
}
and
public static void main (String[] args) {
Season[] sA = Season.values();
//line n1
}
Which three code fragments, at line n1, prints SPRING
A. System. out.println (Season.values (1));
B. System.out.println (sA[1]);
C. System.out.println (Season.valueOf("SPRING") .ordinal ());
D. System.out.println (Season.valueOf("SPRING") );
```

```
E. System.out.println(Season.valueOf('s'));
F. System. out.println (Season. SPRING);
G. System. out.println (sA[0]);
Question 108
Given code fragment
vari = 1;
var result = IntStream.generate (() -> { return i; })
. limit (100) . sum ();
System. out. println (result);
Which statement prints the same value of result?
A. System.out.println (IntStream. range (0, 99) .count ());
B. System.out.println(IntStream.rangeClosed(0, 100).map(x =>x).count())
C. System.out.println (IntStream.range(1, 100).count());
D. System.out.println(IntStream.rangeClosed(1, 100).count());
Question 109
List list1 = new ArrayList<>();
list1.add("A");
list1.add("B");
List list2= Collections.unmodifiableList (list1);
list1.add("C");
System. out.println (list1);
System. out.println (list2);
a. On line 9, an exception is thrown at run time.
b. [A, B, C]
[ A, B, C]
c.[A, B, C]
```

```
followed by an exception thrown on line 11.
d.[A, B, C]
[A, B]
Question 110
public class practice {
public static void main(String[] args) {
<u>var</u> list = new ArrayList (
List.of("Coffee", "Cappucino", "Latte") );
list.forEach ( (item) -> {
list.remove (item);
});
System.out.println (list);
}
}
What is the result?
a.It prints null
b.A java.util.ConcurrentModificationException is thrown.
c.It prints []
d.[Coffee, Cappucino, Latte]
e.A java.lang. NullPointerException is thrown.
Question 111
Given the content from the courses. txt file:
123: Java: 1
124: MySQL: 2
125: Java Server Pages: 3
Given the code fragment:
```

```
Path filePath = Paths.get("course.txt");
try {
/* line 1 */
} catch (IOException ex) {
System.out.format("File IO Exception is thrown. ", ex);
}
Q Which code fragement at line 1 prints the lines that contain Java from below
a). System.out.println(Files.readString(filePath) .contains ("Java"));
b). Files.lines (filePath) .map (s ->
s.contains("Java")) .forEach (System. out: : println) ;
c). Files.lines (filePath) . filter (s ->
s.contains("Java") ) .forEach (System. out : : println) ;
d). List lines2 = Files.readAllLines (filePath) . filter (s ->
s.contains ("Java"));
for (String line: lines2) {
System.out. println (line);
}
e). List lines1 =
Files. readAllLines (filePath) .contains ("Java");
for (String line : lines2) {
System. out. println (line);
Question 112
public class A {
int a = 0;
int b = 0;
```

```
int c = 0;
public void foo (int i) {
a += b * i;
c -= b * i;
}
public void setB (int i) {
b = 1;
}
Q Which makes class A thread safe?
a. Make foo synchronized.
b. Class A is thread safe.
c. Make A synchronized. ]
d. Make foo and setB synchronized.e
e. Make setB synchronized.
Question 113
int x = 0;
do {
χ++;
if (x == 1) {
continue;
}
System. out. println (x);
}while (x < 1);
What is the result?
a. 0
```

```
b. 0
c. The program prints nothing.
d. 1
e. It prints 1 in infinite loop.
Question 114
public class Main{
public static void main (String[] args) throws IOException {
final Reader reader = new FileReader ("File1.txt");
try (reader) {
reader.read (); //line 1
} finally {
reader.read (); //line 2
}
reader. read (); //line 3
}
}
If File1.txt does exist, what is the result?
a. The program executes and prints nothing.
b.The compilation fails.
c.A java. io. IOException is thrown on line 2.
d.. A java. io. IOException is thrown on line 1.
e.A java.io. IOException is thrown on line 3.
Question 115
public class Main {
public static void main(String[] args) {
List fruits = List.of("banana", "orange", "apple", "lemon");
```

```
Stream s1 = fruits.stream();
Stream s2 = s1.peek(i -> System.out.print(i + " "));
System.out.println(" ----- ");
Stream s3 = s2.sorted();
Stream s4 = s3.peek(i -> System.out.print(i + " "));
System.out.println(" ---- ");
String strFruits = s4.collect(Collectors.joining(","));
}
}
What is the output?
a.----
banana orange apple lemon apple banana lemon orange
b.----
banana orange apple lemon
----- apple banana lemon orange
c.banana orange apple lemon apple banana lemon orange
d.banana orange apple lemon
-----
apple banana lemon orange
e.----
```

#### **Question 116**

```
Class.forName (JDBC DRIVER CLASS NAME);
```

When is it necessary to execute this statement?

- a. It must be executed before each call to DriverManager to get a Connection using the named JDBC driver.
- b. It is no longer required to execute this method.
- c. It must be executed once and only before the first call to DriverManager to get a Connection using the named JDBC driver.
- d. It must be executed once and before accessing the named JDBC driver in any way.

### **Question 117**

Test.Greet i = new Greet();

i.print();

```
String [] words = {"am", "am", "first", "second", "mismatch"};
Map map = Arrays.stream (words)
.collect(Collectors
.groupingBy (x -> x, Collectors.counting()) );
System.out.println(map);
Taking into account that the order of the elements is unpredictable, what is the
output?
{am=2, first=1, mismatch=1, second=2}
{mismatch=1, am=2, first=1, second=1}
{1=mismatch, 2=am}
{mismatch=2, am=2, first=1, second=1}
Question 118
public class Test {
private static class Greet{
private void print(){
System.out.println("Hello World");
public static void main(String[] args) {
```

```
}
}
What is the result?
The compilation fails at line 9.
Hello World
The compilation fails at line 8.
The compilation fails at line 2.
Question 119
Which two expressions create a valid Java Path instance?
Paths.get (URI.create("file:///domains/oracle/test.txt"))
new Path ("foo")
Paths. get ("foo")
Paths.getPath ("too")
Path.get (new URI ("file:///domains/oracle/test.txt") )
Question 120
public class Tester {
static Person p = null;
public static void main(String[] args) {
p = checkPerson(p);
System.out.println(p);
Person p1 = new Person("Joe");
p1 = checkPerson(p);
System.out.println(p1);
}
public static Person checkPerson(Person p) {
if(p == null) {
p = new Person("Marry");
}
return p;
}
}
```

```
What is the result?
Joe
Joe
Mary
Mary
null
null
Marry
Joe
Question 121
24.Given,
public class ExSuper extends Exception {
  private final int eCode;
  public ExSuper(int eCode, Throwable cause) {
    super(cause);
    this.eCode = eCode;
  }
  public ExSuper(int eCode, String msg, Throwable cause) {
    super(msg, cause);
    this.eCode = eCode;
  }
  public String getMessage() {
    return this.eCode + ": " + super.getMessage() + "-" + this.getCause();
  }
}
public class ExSub extends ExSuper {
  public ExSub(int eCode, String msg, Throwable cause) {
```

```
super(eCode, msg, cause);
  }
}
And the following code fragment:
try {
  String param1 = "Oracle";
  if (param1.equalsIgnoreCase("oracle")) {
    throw new ExSub(9001, "APPLICATION ERROR-9001", new
FileNotFoundException("MyFile.txt"));
  }
  throw new ExSuper(9001, new FileNotFoundException("MyFile.txt"));
} catch (ExSuper ex) {
  System.out.println(ex.getMessage());
}
What is the result?
9001: APPLICATION ERROR-9001-MyFile.txt
Compilation fails at Line 1.
9001: APPLICATION ERROR-9001-MyFile.txt
9001: java.io.FileNotFoundException: MyFile.txt-MyFile.txt
9001: java.io.FileNotFoundException: MyFile.txt-MyFile.txt
Question 122
Given, TripleThis. java:
import java.util.function. *:
public class TripleThis (
public static void main (String(] args) {
Function tripler = x \rightarrow (return (Integer) x * 3;);
```

TripleThis. printValue (tripler, 4):

public static void printValue (Function f, I num) +

```
System. out printin (f. apply (num));
}

Compiling TripleThis. java gives this compiler warning:
Note: TripleThis. java uses unchecked or unsafe operations.

Which two replacements remove this compiler warning and prints 12?

a) Replace line 9 with Function tripler - x > (zeturn x - 3; 1

b) Replace line 12 with public static void prinoValue (Function f, Integer nur c) Replace line 9 with Function tripler = x > (return x - 3; }

d) Replace line 9 with Function tripler = x - (return (Integer) x * 3; }

e) Replace line 12 with public static void printValue (Function f, int, num)

f) Replace line 12 with public static void printValue (Function f, T num)
```

## Question 123

Given the code fragment:

```
public static void main (String] args) {
List even - List.of();
even. add (0, -1);
even. add (0, -2):
even. add (0,-3);
System.out.println(even);
}
What is the output?
The compilation fails.
A runtime exception is thrown.
[-3, -2. -1]
[-1, -2, -3]
```

# Question 124

Which two statements are correct about modules in Java?

- a) module-info.java cannot be empty.
- b) module-info.java can be placed in any folder inside module-path.
- c) A module must be declared in module Info.Java file.
- d) java.base exports all of the Java platforms core packages.
- e) By default, modules can access each other as long as they run in the same folder.

### Question 125

```
Given the code fragment:
var i = 1:
var result = IntStream.generate (() -> ( return i, ))
.limit (100) .sum ():
System. out - println (result);
Which statement prints the same value of result?
System. out .printin (IntStream-rangeclosed (0, 100) -map (x \rightarrow> 7) - count ());
System.out -println (IntStream.range (1, 100) - count o;
System. out -printin (IntStream. rangeClosed (1, 100) .count ());
System.out-println (IntStream. range (0, 99) - count ());
Question 126
public class Main {
public static void main (String[) args) {
Thread t1 = new Thread (new MyThread ());
Thread t2 = new Thread (new MyThread ());
Thread t3 = new Thread (new MyThread ());
t1.start();
t2. run ();
t3. start ();
t1. start ();
}}
class MyThread implements Runnable {
public void run () {
System. out .printin ("Running.");
}}
Which one is correct?
A. An Illegal ThreadStateException is thrown at run time.
B. Three threads are created.
C. The compilation fails.
D. Four threads are created.
```

#### **Question 127**

Which two statements are true about running code on the class path and the module path?

A modular JAR placed on the class path results in an automatic module.

A non-modular JAR placed on the class path results in an unnamed module.

A modular JAR placed on the module-path results in a named application module.

A non-modular JAR placed on the module-path results in a named application module.

A modular JAR placed on the class path results in a named application module.

```
Group 4 Dump 4
Question 1:
Given:
public class StrBldr {
static StringBuilder sb1 = new StringBuilder("yo ");
StringBuilder sb2 = new StringBuilder("hi ");
public static void main(String[] args) {
sb1 = sb1.append(new StrBldr().foo(new StringBuilder("hey")));
System.out.println(sb1);
}
StringBuilder foo(StringBuilder s) {
System.out.println(s + " oh " + sb2);
return new StringBuilder("ey");
}
}
What is the result?
A) oh hi hey
B) Compile time error occurs.
C) hey oh hi yo ey
D) hey oh hi
E) hey oh hi ey
```

F) yo ey

```
Question 2:
Code:
import java.io. Serializable;
public class MyPersistenceData implements Serializable{
String str;
private void methodA() {
System.out.println("methodA");
}
}
You want to implement the java.io. Serializable interface to the MyPersistenceData
class.
Which method should be overridden?
A) The readExternal and writeExterbal method.
B) Nothing.
C) The writeExternal method.
D) The readExternal method.
Question 3:
Code:
package q3;
import java.time.LocalDate;
import java.util.ArrayList;
import java.util.Comparator;
import java.util.List;
import java.util.Map;
import java.util.Optional;
import java.util.stream.Collectors;
```

```
public class Sc {
  public static void main(String[] args) {
  List<Employee> roster = new ArrayList<>();
   // Example employees
   roster.add(new Employee("John Doe", "Downtown", LocalDate.of(1990, 1, 15),
50000));
   roster.add(new Employee("Jane Smith", "Suburb", LocalDate.of(1985, 2, 20),
60000));
   roster.add(new Employee("Jim Brown", "Downtown", LocalDate.of(1992, 3, 25),
55000));
   roster.add(new Employee("Emily White", "Suburb", LocalDate.of(1980, 4, 30),
61000));
   Map<String, Optional<Employee>> highestPaidEmployeesByNeighborhood =
roster.stream()
       .collect(Collectors.groupingBy(
          Employee::getNeighborhood,
          Collectors.maxBy(Comparator.comparing(Employee::getSalary))
       ));
   highestPaidEmployeesByNeighborhood.forEach((neighborhood, employee) -> {
     employee.ifPresent(e -> System.out.println(neighborhood + ": " + e.getName()
+ " with salary " + e.getSalary()));
   });
    }
}
Given:
public class Employee {
```

```
private String name;
private String neighborhood;
private LocalDate birthday;
private int salary;
}
and
List roster= new ArrayList<>();
Map m= roster.stream();
//line 1
Which code fragment on line 1 makes the m map contain the employee with the
highest salary for each neighborhood?
A) .collect(Collectors.groupingBy(Employee::getNeighborhood,
 Collectors.maxBy(Comparator.comparing(Employee::getSalary))
      ));
B) .collect(Collectors.groupingBy(e->e.getNeighborhood(),
      Collectors.maxBy((x,y)->y.getSalary()-x.getSalary())
      ));
C) .collect(Collectors.maxBy((x,y)->y.getSalary(x.getSalary(),
      Collectors.groupingBy(Employee::getNeighborhood)
      ));
D) .collect(Collectors.maxBy(Employee::getSalary,
      Collectors.groupingBy(Comparator.comparing(e->e.getNeighborhood()))
       ));
Question 4:
Given:
public class StrBldr {
```

```
static StringBuilder sb1 = new StringBuilder("yo ");
StringBuilder sb2 = new StringBuilder("hi ");
public static void main(String[] args) {
sb1 = sb1.append(new StrBldr().foo(new StringBuilder("hey")));
System.out.println(sb1);
}
StringBuilder foo(StringBuilder s) {
System.out.println(s + " oh " + sb2);
return new StringBuilder("ey");
}
}
What is the result?
A) oh hi hey
B) Compile time error occurs.
C) hey oh hi yo ey
D) hey oh hi
E) hey oh hi ey
F) yo ey
Question 5:
Code:
public class Main {
public static void main(String[] args) throws IOException{
final Reader reader = new FileReader("File1.txt");
try (reader) {
reader.read(); // line 1
} finally {
reader.read(); // line 2
}
```

```
reader.read(); // line 3
}
}
If File1.txt does exist, what is the result?
Options:
A. A java.io.IOException is thrown on line 3.
B. The program executes and prints nothing.
C. The compilation fails.
D. A java.io. IOException Lon is thrown on line 1.
E. A java.io.IOException is thrown on line 2.
Question 6:
Given the code fragment:
public class Main {
public static void main(String[] args) {
try {
Path path = Paths.get("/u01/work");
BasicFileAttributes attributes = Files.readAttributes(path,
BasicFileAttributes.class); // line 1
System.out.println(attributes.isDirectory());
} catch (IOException e) {
e.printStackTrace();
}
}
You want to examine whether path is a directory.
Which code inserted on line 1 will accomplish this?
Options:
A. BasicFileAttributes attributes=Files.readAttributes(path, "isDirectory");
```

B. BasicFileAttributes attributes = Files.readAttributes(path, BasicFileAttributes.class);

- C. BasicFileAttributes attributes=Files.isDirectory(path);
- D. BasicFileAttributes attributes = Files.readAttributes(path, FileAttributes.class);

#### Question 7:

Code:

class.forName(JDBC\_DRIVER\_CLASS\_NAME);

When is it necessary to execute this statement?

A.It must be executed before each all to DriverManager to get a connection Using the named JDBC driver.

B.It must be executed once and only before the first call to DriverManager to get a Connection using the named JDBC driver.

C.It must be executed once and before accessing the named JDBC driver in any way.

D.It is no longer required to execute this method.

#### **Question 8:**

b:

while(j<txt1.length()) {

char y=txt1.charAt(j);

```
Code:
StringBuilder txt1 = new StringBuilder("PPQRRRSTT");
int i=0;
a:
while(i<txt1.length()) {
    char x = txt1.charAt(i);
    int j=0;
i++;
```

```
if(i!=j\&\&y==x){
txt1.deleteCharAt(j);
// line 1
}
j++;
}
}
System.out.println(txt1);
Which two statement inserted independently at line 1 enable this code to print
PRRT?
A. i--;
B. continue b;
C. break b;
D. j--;
E. continue a;
F. break a;
Question 9:
Given the code fragment:
8.public class Test {
9. private final int x =1;
10. static final int y;
11. public Test() {
12. System.out.println(x);
13. System.out.println(y);
14.}
15. public static void main(String args[]) {
16. new Test();
```

```
17.}
18.}
What is the result?
A. The compilation fails at line 16.
B. The compilation fails at line 9.
C. 10
D. The compilation fails at line 13.
E. 1
Question 10:
Given:
public class Main {
public static void main(String[] args) {
String source = "/u01/work/stage/message.txt";
String destination = "/u01/work/message.txt";
// line 1
}catch(IOException e) {
e.printStackTrace();
}
}
You want to move source.txt to the destination directory even if a file with the same
name is in the destination directory.
Which code inserted on line 1 will accomplish this?
A. try {
Files.move(Paths.get(source), Paths.get(destination));
B. try (FileChannel1 in = new
FileInputStream(source).getChannel1();
```

```
FileChannel1 out = new
FileOutputStream(destination).getChannel()){
in.transferTo(0, in.size(), out);
C. try {
Files.move(Paths.get(source, Paths.get(destination),
StandardCopyOption.REPLACE_EXISTING);
D. try {
Files.copy(Paths.get(source), Paths.get(destination),
StandardOperation.CREATE_NEW);
Files.delete(Paths.get(source));
Question 11:
Which three initialization are correct?
a) float x=1f;// since f is used for float it converts the value to float
b) int [][][] e= {{1,1,1},{2,2,2}};// for 3-D additional one more curly bracket required
c) String contact#="(+2) (999) (232)"; //# cant be used for variable name
d) short sh=(short)'A';//it type casts from character to short
e)int x=12_34; //int can have _ in between numbers
f) byte b=10;char c=b;// it has to type cast to character
Question 12:
Given the code fragment
Integer i=11;
a)Double b=Double.valueOf(i);
b) Double b=Double.parseDouble(i);// for parseDouble the argument can't be
integer;
c) Double a=i; // cant convert from Integer to Double
```

d) Double c= (Double)i;// cannot cast from Integer to Double

```
e) double d=i;
Question 13:
Code:
public static void main(String args[]) {
String s = "10";
try {
int x = 0;
x = Integer.parseInt(s,2);
System.out.println("x is "+x);
}
catch(NumberFormatException e) {
System.out.println("Error parsing value of "+x); //line 2
}
}
}
What is the result?
A Error parsing value 0
B The compilation fails due to an error in line 1.
Cxis 2.
D x is 10.
E The compilation fails due to an error in line 2.
Question 14:
Code:
public class Person {
private String name = "Green";
public void setName(String name) {
String title = "Mr. ";
this.name = title+name;
```

```
}
public String toString() {
return name;
}
}
and
public class Test{
public static void main(String[] args) {
Person p = new Person();
p.setName("Blue");
System.out.println(p);
}
}
What is the result?
A An exception is thrown at runtime.
B Green
C Mr. Blue
D Mr. Green
Question 15:
Code:
public abstract class Automobile { // line 1
 abstract void wheels();
}
public class Car extends Automobile { // line 2
 void wheels(int i) { // line 3
   System.out.print(4);
 }
```

```
public static void main(String[] args) {
   Automobile ob = new Car(); // line 4
   ob.wheels();
 }
}
What must you do so that the code prints 4?
a) Replace the code in line 2 with Car ob = new Car();
b) Remove the parameter from the wheels method in line 3.
c) Remove abstract keyword in line 1.
d) Add @Override annotation at line 2.
Question 16:
Code:
public interface Worker {
 public void doProcess();
}
public class HardWorker implements Worker {
 public void doProcess() {
   System.out.println("doing things");
 }
}
public class Cheater implements Worker {
 public void doProcess() { }
}
public class Main <T extends Worker> extends Thread { // Line 1
  private List<T> processes = new ArrayList<>(); // Line 2
  public void addProcess(HardWorker w) { // Line 3
    processes.add(w);
```

```
}
  public void run() {
   processes.forEach((p) -> p.doProcess());
 }
}
What needs to change to make these classes compile and still handle all types of
interface Worker?
Options:
a) Replace Line 3 with public void addProcess(Worker w) { }
b) Replace Line 3 with public void addProcess(T w) { }
c) Replace Line 1 with public class Main extends Thread { }
d) Replace Line 2 with private List processes = new ArrayList<>();
Question 17:
Code:
Locale I = new Locale("en", "US");
LocalDate today = LocalDate.of(2018, 12, 17);
String mToday =
today.format(DateTimeFormatter.ofLocalizedDate(FormatStyle.MEDIUM));
String sToday =
today.format(DateTimeFormatter.ofLocalizedDate(FormatStyle.SHORT));
System.out.println(mToday);
System.out.println(sToday);
What is the result?
O December 17, 2018
 12/17/18
O Friday, December 17, 2018
 December 17, 2018
```

```
O 12/17/18
 Dec 17, 2018
● Dec 17, 2018
 12/17/18
Question 18:
Code:
public class ResourceTest {
  public static void main(String[] args){
   final MyResource res1 = new MyResource();
   MyResource res2 = new MyResource();
   try(res1; res2) {
     // do something
   } catch(Exception e) {}
 }
 static class MyResource implements AutoCloseable {
   public void close() throws Exception {}
 }
}
Which statement is true?
O The code fails to compile as MyResource must implement Closeable.
O The code compiles successfully.
O The code fails to compile as res2 should be declared as final.
O The code fails to compile as try-with-resource needs a variable declaration such
as MyResource r1 = res1; MyResource r2 = res2;
```

**Question 19:** 

#### Code:

Which two statements are true about a class that is marked @depricated?

- A. There is always another class that can be used instead of the deprecated class.
- B. The author of the class wants to discourage people from using the class in any way.
- C. Using the class is guaranteed to cause errors at runtime.
- D. Using the class will cause the Java compiler to give a warning.
- E. The class cannot be extended.

```
Question 20:
```

interface MyInterface5 {

```
Code:
interface MyInterface1 {
public int method() throws Exception;
private void pMethod() { /* an implementation of pMethod */ }
}
interface MyInterface2 {
public static void sMethod() { /* an implementation of sMethod */ }
public boolean equals();
}
interface MyInterface3 {
public void method();
public void method(String str);
}
interface MyInterface4 {
public void dMethod() { /* an implementation of dMethod */ }
public void method();
}
```

```
public static void sMethod();
public void method(String str);
}
Which two interfaces can be used in lambda expressions?
A. MyInterface3
B. MyInterface2
C. MyInterface5
D. MyInterface4
E. MyInterface1
Question 21:
Code:
public class Person {
private String name;
private int age;
public Person(String name, int age) {
this.name = name;
this.age =age;
}
public int getAge() {
return age;
}
var persons= Arrays.asList(new Person("Haz", 18).
new Person("Peter", 23).
new Person("Famela", 23).
new Person("David", 12));
int num =persons.stream().
```

```
mapToInt(Person::getAge).
filter (p->p<20).
reduce(0, (a,b)->a+b);
System.out.println(num);
a)30
b) 41
c) 46
d) 35
```

## Question 22:

22. Which code fragment does a service use to load the service provider with a Print interface?

A. private Print print = com.service.Provider.getInstance();

B. private java.util.ServiceLoader loader = ServiceLoader.load (Print.class);

C. private java.util.ServiceLoader loader = new java.util.ServiceLoader<> ();

D. private Print print = new com.service.Provider.PrintImpl();

## **Question 23:**

- 23. Which two statements are true about running code on the class path and the module path?
- A. A non-modular JAR placed on the --classpath results in an unnamed module.
- B. A modular JAR placed on the --module-path results in a named application module.
- C. A non-modular JAR placed on the --module-path results in a named application module.
- D. A modular JAR placed on the --classpath results in a named application module.
- E. A modular JAR placed on the --classpath results in an automatic module..

#### Question 24:

```
Code:
. A() /* line n1 */ {
super("The Mandatory Criteria Yet to Meet");
}
20. public class TestCE {
21. public static void main(String[] args) throws A {
22. int a = 10, b = 13;
23. try {
24. if (a < b) {
25. throw new A();
26.}
27. } catch (Exception e) {
28. System.out.println(e);
29.}
30. System.out.println("Continue...");
31.}
32.}
"You must define the A exception class. The program execution must be terminated
if the condition at line 24 fails and an exception is thrown at line 25.
Which statement at line n1 defines A as per the requirement?
a) class A extends Exception {
b) class A extends RuntimeException {
c) class A extends Throwable {
d) class A extends ArithmeticException {"
Question 25:
Code:
Supplier supplier = () -> "Hello World";
```

```
// line 1
Which statement on line 1 is calling the method of the supplier object correctly?
a) System.out.println(supplier.accept());
b) System.out.println(supplier.test());
c) System.out.println(supplier.get());
d) System.out.println(supplier.apply());
Question 26:
Code:
String s = "Oracle";
Runnable r = () -> {
System.out.println(s);
};
s = "Java";
Thread t = new Thread(r);
t.start();
The multiple-choice question asks: "What is the result?" with the following
options:
a) Compilation error // Local variable s defined in an enclosing scope must be final
or effectively final
b) Oracle
c) An exception is thrown at run time.
d) Java
Question 27:
Code:
Given:
int i =0;
do{
```

```
for(int j = i/2; j>0; j--) {
System.out.println(j + " ");
}
i-=2;
} while(i>0);
What is the result?
A. 5
B. Nothing
C.54321
D.543214321321211
Question 28:
Code:
Given the code fragment:
import java.io.File;
import java.io.FileInputStream;
import java.io.IOException;
public class Hema {
public static void main(String[] args) throws IOException {
String filename = "/u01/work" + args[0];
// line 1
File file = new File(filename);
String canonicalPath = file.getCanonicalPath();
FileInputStream fis = new FileInputStream(file);
// ...
}
}
```

You want to validate a path name before the read file. Before validation, all path names should be canonicalized.

Which code inserted on the line n1 will accomplish this?

```
A) File file = new File(filename);

String canonicalPath = file.getCanonicalPath();

FileInputStream fis = new FileInputStream(file);

B) File file = new File(filename).getAbsoluteFile();

FileInputStream fis = new FileInputStream(file);

C) Path file = paths.get(filename);

String canonicalPath = file.normalize().substring();

FileInputStream fis = new FileInputStream(canonicalPath);

D) Path file = paths.get(filename);
```

Path canonicalPath = file.toAbsolutePath().toString();

FileInputStream fis = new FileInputStream(canonicalPath);

#### **Question 29:**

es.shutdown();

```
Code:
```

```
import java.util.concurrent.ExecutionException;
import java.util.concurrent.ExecutorService;
import java.util.concurrent.Executors;
import java.util.concurrent.Future;
class Test {
  public static void main(String[] args) throws InterruptedException,
  ExecutionException {
    ExecutorService es = Executors.newCachedThreadPool();
    es.execute(() -> System.out.println("Ping "));
    Future<String> future = es.submit(() -> "Pong"); //added line
    System.out.println(future.get()); // line 2
```

```
}
}
Which statement at line 1 will print Ping Pong?
A) Future<String> future = es.submit(() -> "Pong");
B) Future < String > future = new Callable() {
public String call() throws Exception {
return "Pong";
}
}.call
C) Future < String > future = es.invokeAny(new Callable < String > () {
public String call () throws Exception {
Return "Pong";
}
});
D) Future <String> future = es.execute ( () -> "Pong");
Question 30:
Code:
public class A {
  int a = 0;
  int b = 0;
  int c = 0;
   public synchronized void foo(int i) {
    a += b * 1;
    c -= b * 1;
    System.out.println("a: " + a + ", c: " + c);
  }
   public synchronized void setB(int i) {
```

```
b = i;
  }
  public static void main(String[] args) {
    A instance = new A();
    instance.setB(5);
    instance.foo(0);
  }
}
Which makes class A thread safe?
A. Make sets synchronized.
B. Make foo synchronized.
C. Class A is thread safe.
D. Make foo and sets synchronized.
E. Make A synchronized.
Question 31:
public interface APIInterface {
public default void process() {
System.out.println("Process() called 1.");
}
}
public abstract class AbstractAPI {
public abstract void process();
}
public class Apilmpl extends AbstractAPI implements APIInterface {
@Override
public void process() {
System.out.println("Process() called: 2.");
}
```

```
public static void main(String[] args) {
var impl = new ApiImpl();
impl.process();
}
What is the result?
Options:
A. The compilation fails.
B. A java.lang.NoSuchMethodException is thrown.
C. The program prints Process() called: 1.
D. The program prints Process() called 2.
E. A java.lang.IllegalAccessException is thrown.
Question 32:
Code:
package pac;
public class Hello {
public static void main(String[] args) {
Module module = Hello.class.getModule();
System.out.println("Module: "+module);
System.out.println("Name: "+module.getName());
System.out.println("Descriptor: "+module.getDescriptor());
}
Given the directory structure:
\Test
Hello.java
Given the commands to execute at the Test directory prompt:
Test>java -cp pac pac.Hello
```

Which statement is true?

A.Execute java --module-path pac pac.Hello instead of java -cp pac pac.Hello and on execution the program prints:

Module: pac @<</font><</font>hash code>>

Name: pac.Test

**Descriptor: null** 

B.On execution of the given commands, the program prints:

Module: unnamed module @<</font><</font>hash code>>

Name: null

**Descriptor: null** 

C.Create an empty module-info java file in the Text directory and on execution of the given commands, the program prints:

Module: unnamed module @<</font><</font>hash code>>

Name: null

Descriptor:module-info

D.On execution of the given commands the program prints:

Module: pac.Hello @<</font><</font>hash code>>

Name: unamed

**Descriptor: null** 

## **Question 33:**

Code:

Given:

class Employee{

String office;

}

and the code fragment:

5.public class HRApp{

6. var employee = new ArrayList();

```
7. public var display() {
8. var employee = new Employee();
9. var offices = new ArrayList<>();
10. offices.add("Chicago");
11. offices .add("Banglore");
12. for(var office:offices) {
13. System.out.println("Employee Location"+of);
14.}
15.}
16.}
Which two lines cause compilation errors?
<mark>a) line 6</mark>
b) line 12
c) line 8
d) line 7
Question 34:
Code:
Given: public class Sports {
public double getRatings()
{
}
} public class Football extends Sports {
public double getRatings()
{
}
```

}

Which is the correct implementation of the getRatings method in the Football subclass?

- a)The subclass getRatings method implementation directly accesses the fields in the Sports superclass.
- b)The subclass getRatings method uses public getRatings() to call the base class method but uses its own named fields in the implementation
- c)The subclass getRatings method uses new.getRatings() to call the base class method but uses its own named fields in the implementation.

d)The subclass getRatings() method uses super.getRatings() to call the base class method but uses its own named fields in the implementation.

## **Question 35:**

```
Code:
public class Person {
private String name = "Joe Bloggs";
public Person(String name) {
this.name = name;
}
public String toString() {
return name;
}
}
and
public class Tester{
public static void main(String[] args) {
Person p1 = new Person(); // line 1
System.out.println(p1);
}
```

```
}
What is the result?
Ap1
B null
C The Compilation fails due to an error in line 1.
D Joe Bloggs
Question 36:
Code:
public class Person {
 private String name = "Joe Bloggs";
 public Person(String name) {
   this.name = name;
 }
 public String toString() {
   return name;
 }
}
and
public class Tester {
 public static void main(String[] args) {
   Person p1 = new Person(); // line 1
   System.out.println(p1);
 }
}
What is the result?
```

- b) null
- c) The compilation fails due to an error in line 1.
- d) Joe Bloggs

### Question 37:

Code:

Which two can be considered good practices for serializing Java objects?

O Implement secure serialization by generating secure object hash or using encryption.

O Implement serialization for long-term data storage.

O Assign null value by default while serializing and deserializing a transient variable.

O Always override the readObject/writeObject methods from the java.io.Serializable interface.

O Ensure that the class definition used is the same as the class definition used by Java runtime at the time when the object was serialized.

# **Question 38:**

```
Code:
class Item {
public String name;
public int count;
public Item(String name, int count) {
this.name = name;
this.count = count;
}
```

```
and
import java.util.List;
public class Test{
public static void main(String[] args) {
var items = List.of(new Item("A", -2), new Item("B", 2),
new Item("C", 12), new Item("D", 5), new Item("E", 6));
if (items.stream().anyMatch(i -> i.count < 0)) {
System.out.println("There is an item for which the variable count is below zero.");
}
}
}
You want to examine the items list it contains an item for which the variable count
is below zero. Which code fragment at line 1 accomplish this?
A. If (items.stream () .filter (i -> count < 0) . findAny () ) {
B. If (items.stream () .filter (i -> count < 0) . findFirst () ) {
C. If (items.stream () .allMatch (i -> count < 0))) {
D. If (items.stream () .anyMatch (i -> i.count < 0) ) {
Question 39:
Code:
Why would you choose to use a peek operation instead of a forEach operation on a
Stream?
a) To remove an item from the end of the stream.
b) To remove an item from the beginning of the stream.
c) To process the current item and return a stream.
```

#### **Question 40:**

d) To process the current item and return void.

Code:

```
char[] characters = new char[100];
FileReader reader = new FileReader("file_to_path");
try {
//line 1//
System.out.println(String.valueOf(characters));
} catch (Exception e) {
e.printStackTrace();
}
You want to read data through the reader object. Which statement inserted on line
1 will accomplish this?
a) characters.read();
b) reader.readLine();
c) characters = reader.read();
d) reader.read(characters);
Question 41:
Code:
import java.util.ArrayList;
import java.util.Arrays;
public class NewMain {
public static void main(String[] args) {
String[] catNames = { "abyssinian", "oxicat", "korat", "laperm", "bengal", "sphynx" };
var cats = new ArrayList<>(Arrays.asList(catNames));
cats.sort((var a, var b) -> a.compareTo(b));
cats.forEach(System.out::println);
}
}
Answer:
```

```
A. abyssinian
 oxicat
 korat
 laperm
 bengal
 sphynx
B.sphynx
 oxicat
 laperm
 korat
 bengal
 abyssinian
C.abyssinian
 bengal
 korat
 laperm
 oxicat
 sphynx
D. nothing
Question 42:
Code:
public class Person {
private String name;
public Person(String name) {
this.name=name;
}
public String toString() {
```

```
return name;
}
}
public class Tester {
static Person p = null;
public static void main(String[] args) {
p = checkPerson(p);
System.out.println(p);
Person p1 = new Person("Joe");
p1 = checkPerson(p);
System.out.println(p1);
}
public static Person checkPerson(Person p) {
if(p==null) {
p = new Person("Mary");
}
return p;
}
}
What is the result?
A) Mary Mary
B) Mary Joe
C) null null
D) Joe Joe
Question 43:
Code:
```

```
Given:
static void add (List l) {
l.add(4);
l.add(3.14f);
public static void main(String[] args) {
var x = new ArrayList();
x.add(3);
add(x);
for (Integer i: x) {
System.out.print(i+" ");
}
}
What is the result?
A) The program prints 3 4 and throws a classCastException.
B) 3 4 3.14
C) 3 4 3
D) 3 4
Question 44:
Code:
Given this enum declaration:
1. enum Alphabet {
2. A, B, C;
3.
4.}
Examine this code:
System.out.println(Alphabet.getFirstLetter());
```

```
What code should be written at line 3 to make this code print A?
A)static String getFirstLetter() { return Alphabet.values() [1].toString();
B)final String getFirstletter() { return A.toString(); }
C)static String getFirstletter() { return A.toString(); }
D)String getFirstLetter() { return A.toString(); }
Question 45:
Code:
public class Over {
 public void analyze(Object[] o) {
  System.out.println("I am an object array");
 }
 public void analyze(long[] l) {
   System.out.println("I am an array");
 }
 public void analyze(Object o) {
  System.out.println("I am an object");
 }
 public static void main(String[] args) {
   int[] nums = new int[10];
   new Over().analyze(nums); // This will invoke the analyze(Object o) method
 }
}
what is the output?
```

```
a) The compilation fails due to an error in line 1.
b) I am an object
c) I am an array
d) I am an object array
Question 46:
Code:
package dumps;
public class DoClass {
static String s;
public static void main(String[] args){
switch(s) {
case "41": s += "41";
default: s+= "def";
case "42": s += "42";
}
System.out.println(s);
}
}
What is the output?
A)41 def 42
B)def 42
```

C)An exception is thrown at runtime.

D)null

```
Question 47:
Code:
import java.util.*;
public class Foo {
 public void foo(Collection ag) {
   System.out.println("Bonjour le monde!");
 }
}
class Bar extends Foo {
 public void foo(Collection arg) {
   System.out.println("Hello world!");
 }
 public void too(List arg) {
   System.out.println("Hola Mundo!");
 }
}
public class Main {
 public static void main(String[] args) {
   ArrayList li = new ArrayList(); // Creating an ArrayList
   Bar b = new Bar();
                            // Creating Bar instance
   Foo f = b;
                       // Upcasting Bar to Foo
   b.foo(li);
   f.foo(li);
 }
}
What is the output?
A)Bonjor le monde!
  Hello World
B)Hello World!
 Hello World!
C)Hello World!
 Bonjor le monde!
```

```
D)Bonjor le monde!
 Bonjor le monde!
Question 48:
Code:
package com.excel.user;
import java.util.Arrays;
import java.util.Comparator;
public class City {
public static void main(String[] args) {
String[] towns = {"boston", "paris", "bangkok", "oman"};
Comparator<String> ms = (a,b) -> b.compareTo(a);
Arrays.sort(towns,ms);
System.out.println(Arrays.binarySearch(towns,"oman",ms));
}
}
What is the result?
A) -1
B) -3
C) 2
D) 1
Question 49:
Code:
public class Foo {
public void foo(Collection arg) {
System.out.println("Bonjour le monde!");
}
```

```
}
and
public class Bar extends Foo{
public void foo(Collection arg) {
System.out.println("Hello world!");
}
public void foo(List arg) {
System.out.println("Hola Mundo!");
}
}
and
Foo f1 = new Foo();
Foo f2 = new Bar();
Bar b1 = new Bar();
List<String> li = new ArrayList<>();
Which three are correct? (Choose three.)
A. b1.foo(li) prints Hello world!
B. f1.foo(li) prints Bonjour le monde!
C. f1.foo(li) prints Hello world!
D. f1.foo(li) prints Hola Mundo!
E. b1.foo(li) prints Bonjour le monde!
F. f2.foo(li) prints Hola Mundo!
G. f2.foo(li) prints Bonjour le monde!
H. b1.foo(li) prints Hola Mundo!
I. f2.foo(li) prints Hello world!
```

Question 50:

Code:

```
Given:
public interface InterfaceOne {
public void methodA();
public void methodB();
}
and
public interface InterfaceTwo extends AbstractClass {}
and
public abstract class AbstractClass implements InterfaceOne {
public String origin "Abstract Class";
public void methodA(){
System.out.println("A");
}
public abstract void methodC();
}
and
public class ConcreteClass extends AbstractClass {
public void methodC(String c){
System.out.println(c);
}
}
```

Which three changes make this code compile?

- a) Remove methodA() from AbstractClass
- b) Implement methodC() in ConcreteClass
- c) Implement methodB() in ConcreteClass
- d) Add the keyword abstract to the methodA() and methodB() declarations in InterraceOne
- e) Remove methodA() from InterfaceOne
- f) InterfaceTwo should no longer extend AbstractClass
- g) Implement methodA() in ConcreteClass

```
public class Employee {
private String name;
private String neighborhood;
// the constructors, setters, and getter methods go here
}
and
List<Employee> roster = List.of(new Employee("John", "West town"),
new Employee("Ray", "South town"),
new Employee("Tom"),
new Employee("Kenny", "West town"));
A) Map<String, List<Employee>> e3 =
roster.stream()
.collect (Collectors.groupingBy( e -> Optional.ofNullable (e.getNeighborhood())
.get()
```

```
));
B) Map<String, List<Employee>> e3 =
roster.stream()
.collect (Collectors.groupingBy(
e->Optional.ofNullable(e.getNeighborhood())
.get()
));
C) Map<String, List<Employee>> e1 =
roster.stream()
.collect(Collectors.groupingBy(
(e -> Optional.ofNullable(e.getNeighborhood()))
));
D) Map<Object, List<Employee>> e2 =
roster.stream()
.collect (Collectors.groupingBy(
e -> Optional.ofNullable (e.getNeighborhood())
));
A. Option A
B. Option B
C. Option C
D. Option D
```
